Accuracy	±0.005% of setting	±0.003% of setting	±0.003% of setting	±0.003% of setting	±0.003% of setting	±0.002% of setting	±0.003% of setting
Price	$695	$995	$1035	$1150	$1150	$1550	$1995

Option: DIFFERENTIAL VOLTMETER (ΔVM) OPTION "G" (Bulletin 26)

Available in all "MV" models. (Not available in 330 or E100)

For potentiometric and differential measurements: from 0.5μV to 1000 V dc.

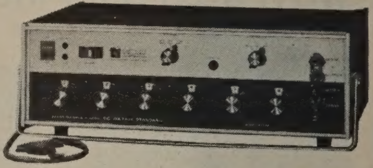
Accuracies: from ±0.005% to ±0.002%. Factory installed. Price: $255

BATTERY/EXTERNAL POWERED DC VOLTAGE STANDARD/SOURCE – MODEL MV 216 A (Bulletin 24)

Internal, re-chargeable battery operation and 117 Vac, 12 Vdc and 24 Vdc external power. Absolute isolation from line. High voltage accuracy and stability. Compliance current. Very low source impedance.

Ranges (dc)	10V	1V	100mV
Resolution (1ppm)	10μV	1μV	100NV
I out	10mA		
Accuracy	0.003% of setting		

Z_{out}	0.01Ω	0.001Ω	20Ω
Power	Internal re-chargeable Batteries also 117 Vac, 12V and 24 Vdc		
Price	$1450		

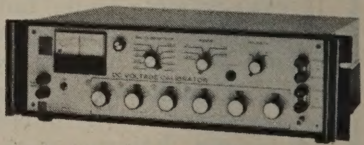


DIFFERENTIAL VOLTMETER (ΔVM) AND CALIBRATOR – MODEL 2902 (Bulletin 21)

The model 2902 is a high accuracy ΔVM for potentiometric and differential DC voltage measurements. Also, it is a highly stable and accurate reference/source/standard.

	MEASURE MODE
Ranges	1000V, 100V, 10V, 1V, 100mVdc
Sensitivity	1000V, 100V, 10V, 1V, 100mV, 10mV, 1mV, 100μV, 10μV
Maximum sensitivity	0.5μV/division
Z_{in}	∞ At null; 10 MΩ off null.
Accuracy	±0.002% of setting.

	OUTPUT MODE
Ranges	100V, 10V, 1V, 100mVdc
Resolution	100μV, 10μV, 1μV, 100NV
Stability	±0.0005%
Current	50 to 100mA
Accuracy	0.002% of setting
Price	$1695



---

10 AMP CURRENT CALIBRATOR (Source) AC and DC Amperes, Auxiliary Instrument, Model 3200 (See Bulletin 27)

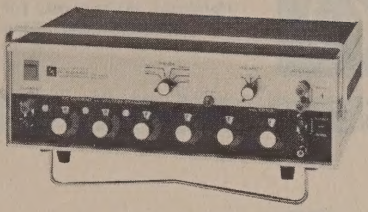
This auxiliary instrument operates from the output of a stable, accurate AC or DC Voltage Calibrator, such as: EDC Model MV 105 J (for d.c.), and EDC Model AC 1000 D/B (for a.c.).

Ranges (ac & dc)	10 A, 1 A, 100 mA, 10 mA, and 1 mA
Accuracy: (dc)	±(0.025% of setting + 0.0025% of range)
(ac)	±(0.035% of setting + 0.0035% of range)
Voltage Compliance	2V (min) to 5V (max).
Price	$1350.00

DC CURRENT AND VOLTAGE STANDARD — MODEL CR 103 J (Bulletin 31)

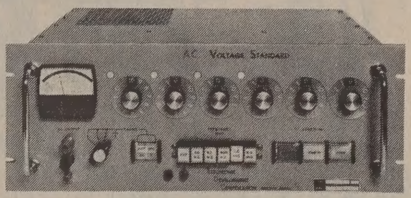
Short-circuit and open-circuit protected. 30 second warm-up. Automatic zero.

	Current Mode	Voltage Mode
DC Ranges	±110 mA	±11 V
	± 11 mA	±1V
		±110 mV
Resolution	100 nA	10 μV
(1 ppm)	10 nA	1 μV
		0.1 μV
Compliance	100 V	50 mA
Accuracy	±0.005% of setting	±0.003% of setting



Price $1595

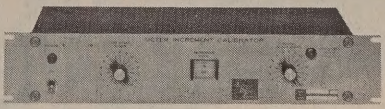
AC VOLTAGE STANDARD — MODEL AC 1000 D/B (Bulletin 41)



Completely solid state. Highly stable. 60 second warm-up. Low output impedance.

Vac rms ranges	1000 V, 1 V, 100 mV, 10 mV
Accuracy	0.025%
Burden	50 VA (2A max.)
Frequency Range	50 Hz to 5 kHz

5 internal frequencies 50 Hz, 60 Hz, 400 Hz, 1 kHz plus optional frequency and unlimited number of frequencies attained by use of external oscillator via front panel terminals.



Distortion	.5%
Weight	45 lbs.
Price	$3990

Option Model IC-15 — Meter increment calibration — Bulletin 42

DIGITALLY PROGRAMMABLE STANDARD MODEL 501 J (Bulletins 51 through 55)

Switching and settling time: 50 μs

Formats: BCD, ASCII, BINARY, or IEEE 488

Certification N B S traceability

Complete specifications: Bulletins 51, 52, 53, 54, 55

Complete Prices: Bulletin 6

	MAIN FRAME Model (501 J) See Bulletin 51	100 mV RANGE Option: D See Bulletin 51	AMPLIFIER RA-3 See Bulletin 54	DC CURRENT PCS-1 See Bulletin 53
Output d.c.	10.0000 Vdc	100.000 mV	100 & 200 V	10 & 100 mA

PROGRAMMABLE D.C. VOLTAGE STANDARD
PROGRAMMABLE RANGING AMPLIFIER
PROGRAMMABLE D.C. CURRENT STANDARD
PROGRAMMER

OPTIONS (Factory installed) (See Bulletin 51).

B— **Additional Resolution** — (see "Resolution, w/Opt. B" above).
C— **Ready Signal** — output signal indicating "ready" state.
D— **100mV Range** — (See "100mV Range" above) (See Opt. D, above).
J — **Bipolar Operation** — Programmable polarity control.
L— **Binary format** — Accepts straight binary program.

ACCESSORIES (May be field installed) (See Bulletin 51).

MR-1 Memory register or buffer storage.
MR-2 Serial-to-parallel converter, w/storage.
AK-1 Negative programming logic.
AM-1 Front panel display and control (for BCD).
AM-2 Front panel display and control (for BINARY).
IS-40 Opto-Isolation.
KT-488 IEEE 488 interface (Kit) See Bulletins 51 & 55.)

AUXILIARY INSTRUMENTS

Separate chassis, plug-in to main frame. No modifications

RCM-4 **Programmer.** (See Bulletin 52) Manually programmed. Automatically sequenced. Up to 40 addresses. Selectable triggering: Manual, automatic or external. Price:
PCS-1 **Programmable DC Current.** (See above) (See Bulletin 53)
RA-3 **Programmable Amplifier.** (See above) (See Bulletin 54)

Electronic Development Corp. 11 Hamlin Street, Boston, MA 02127 (617) 268-9696

All EDC instruments are traceable to the U.S. National Bureau of Standards. Certification supplied with each instrument / All instruments are available under GSA Contact / Export prices slightly higher / Line (Mains) power: 115 Vac. 60 or 400 Hz: or 220 Vac. 50 Hz / Instruments available for no-charge evaluation. Contact your local sales representative or the main plant.

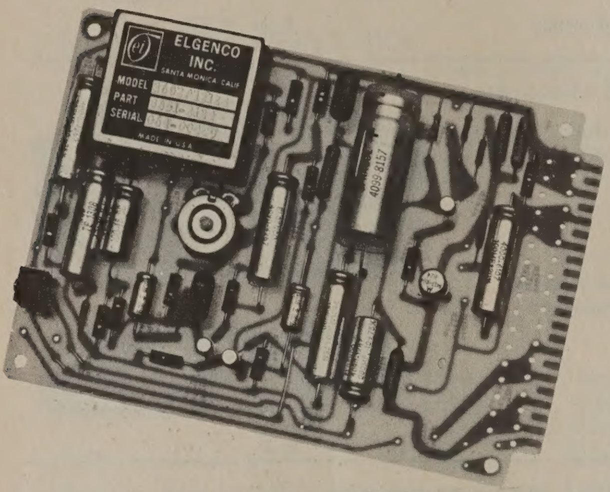
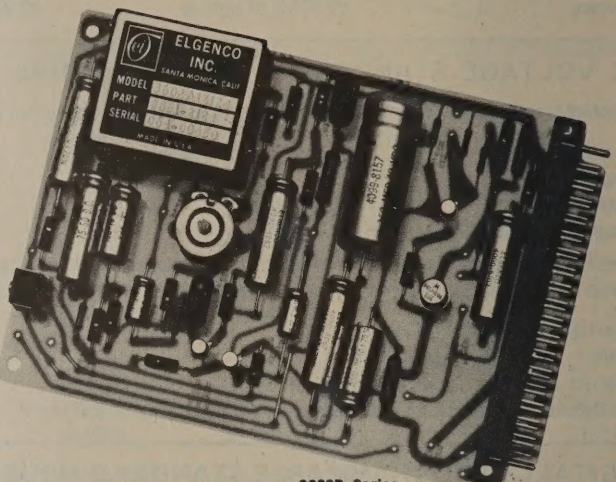
SERIES 3600 FIXED RANGE • NOISE GENERATOR CARDS



3600A Series



3600B Series

SPECIFICATIONS

FREQUENCY RANGE: The frequency band may be any combination of the listed low and high frequencies.

Lower Frequency: 10, 20, 50, or 200 Hz, 5 kHz.

Upper Frequency: 20, 50, 100, 200, or 500 kHz; 1, 2, 3, or 5 mHz.

SPECTRAL UNIFORMITY: Spectral uniformities are available as:

Upper Frequency	Spectral Uniformity
20 kHz to 500 kHz	±0.5, ±1.0, ±2.0 or ±3.0db
1 mHz to 3 mHz	±1.0, ±2.0, or ±3.0db
5 mHz	±2.0 or ±3.0db

As a rule of thumb, the roll off above the specified upper frequency gives a 3db point about twice the specified upper frequency. Roll off above 3db point approaches 12db per octave.

OUTPUT IMPEDANCE:

20 kHz to 500 kHz units ....600 ohms
1 to 5 mHz units ....200 ohms

POWER REQUIREMENTS:

	3600A Series or 3600B Series	Low Current Option 3600A or 3600B	3600C Series
Power supply voltage required	−30 VDC ±1%	−30 VDC ±1%	−24 VDC ±1%
Approximate current..	50 ma	30 ma	37 ma
Output level	0 to 3.0 VRMS	0 to 1.5 VRMS	0 to 2.2 VRMS

Note: The 3600B series units are the same as the 3600A series except the 3600B series have a test point and Elco 00-7023-035-000-001 connector mounted on the PCB.

The 3600A and 3600C units mate with a Cinch 250-22-30-170, Elco 00-6007-022-940-022 connector or equivalent.

SPECIFICATIONS COMMON TO ALL UNITS:

Amplitude Probability Distribution: Gaussian.

Peak to RMS Capability: Minimum dynamic ranges 3.5 to 1 at specified maximum level. Increases with lower output levels.

Maximum Load: 900 ohms minus output impedance.

Operating Temperature Range: 0 to 50°C.

Size: 4½ x 6½ x ⅞ inches.

Weight: 7 oz.

PRICING: (See price list on facing page)

Base Price: 3600A, 3600C and 3600A or C with reduced current option (specify on order).

Base price plus $20.00: 3600B or 3600B with reduced current option (specify on order).

OPTIONS:

Other than specified frequency; add $10.00 each per frequency per board.

Steel shield plate, ¼-inch off conductor side of PCB; add $7.50 each.

Other than specified output impedance; add $5.00 each.

To operate on other power supply voltages, voltage difference must be 30-volts for 3600A or 3600B and 24-volts for 3600C. Specify on order; "Decoupled option for operation on ____________ power supply," and add to price as:

Quantity Per Order	Add Each	Quantity Per Order	Add Each
1	$15.00	25-49	$2.50
2	10.00	50-99	2.00
3	7.50	100-249	1.95
4	6.00	250-499	1.90
5-9	5.00	500 up	1.85

DISCOUNT: Quantity discounts apply as:

Quantity	Discount	Quality	Discount
1-4	List	20-49	13%
5-9	5%	50-99	17%
10-19	10%	100	20%

MODEL 3609A POWER SUPPLY CARD

Size: 4½″ x 6½″ x 2$\frac{1}{16}$″.

Input: 115/230 volts ± 10/20 volts, 50 to 1000 Hz.

Supplies power for up to 2 noise generator cards or up to 4 noise generator cards with reduced current option. Price: **$95.00**

MATING CONNECTOR: Mating Elco Connector; Elgenco, Inc. part numbers 7521-1122, for 3600A, 3600C and 3609A is available at $7.85 each.

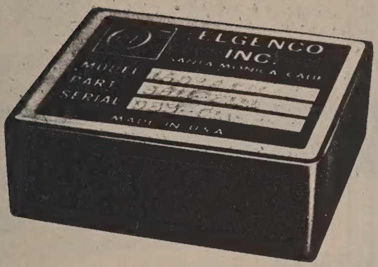
SERIES 1600 • ENCAPSULATED NOISE SOURCE MODULES • 10Hz TO 5MHz



SPECIFICATIONS IN RECOMMENDED CIRCUIT:

The 1600 series provide a low level wide band output. A portion of this wide band is specified to a certain flatness; uniformity. The 3 or 5 millivolt output is for the whole band extending to 5 mHz. Specifications are for 25°C unless specified otherwise.

SPECTRAL DENSITY UNIFORMITY: Available with uniformity to ±½db, ±1db, ±2db, or ±3db and many frequency ranges within 10 Hz to 5 mHz. See price list for complete list of standards.

SPECTRAL DENSITY: Approximately 2 μv/√ Hz .

RMS OUTPUT LEVEL: 1602A series 3 mv; 1603A, 1606A, and 1607A series 5 mv.

OUTPUT IMPEDANCE: Approx 20 ohms.

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian.

OPERATING TEMPERATURE RANGE: 0 to 50°C.

POWER REQUIREMENTS: −30 volts dc ±1% at approximately 3.5 ma. **Note:** external passive components are required to properly install unit.

MOUNTING: .032″ Printed Circuit Leads.

Size: 11/16″ H x 1 53/64″ W x 1 37/64″ D.

WEIGHT: Approx 1.5 oz.

	$605.00	$730.00	$905.00

SPECIFICATIONS • ALSO COMMON TO SERIES 624A

These specs are common to the Series 602A-200, 602A-1390, 603A introduced on this page and the Series 624A on facing page.

DYNAMIC RANGE: 3.5 to 1 peak to RMS at 3 volts RMS open circuit; 5 to 1 at 2.1 volts RMS. Dynamic range is inversly proportional to output level as set by front panel amplitude control.

OUTPUT METER: Rectifier type meter circuit reads proportional to average value, calibrated to read RMS value of Gaussian Noise; 0-5 volts RMS scale.

OPERATING TEMPERATURE RANGE: 0 to 50°C.

POWER SUPPLY: Built-in highly regulated dc supply.

POWER REQUIREMENTS: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac; approximately 5 watts. A rechargeable battery option is available. Battery is recharged by operating unit on ac line.

DIMENSIONS: 5¼″ high x 8⅝″ wide x 11″ deep.

RACK MOUNT: A rack mounting adapter kit is available for rack mounting two units side by side. Also available is a rack mounting adapter kit for rack mounting one unit. One or two units use 5¼″ x 19″ of rack panel space with adapter kit. Full rack width cabinet option for one unit is available. Size of unit with this option is 5¼″ high x 17″ wide x 11″ deep and comes with rack mounting hardware.

SHIPPING WEIGHT: Approximately 12 lbs.

OPTIONS AVAILABLE: Full rack width cabinet with mounting hardware option; rechargeable battery option; BNC output terminal on rear panel option.

ACCESSORIES AVAILABLE: Dual adapter kit and rack mounting hardware; single unit adapter kit with rack mounting hardware and front and rear dummy panels; rechargeable battery adapter kit.

OPTIONS & ACCESSORIES FOR MODELS 602A/603A/610A & SERIES 624A

Adapter kit, single unit rack mounting (mounts one unit in rack, includes blank panel to make dual unit) Part No. 8804-0002	$110.00
Adapter kit, dual unit and rack mounting hardware (mounts two units side by side) Part No. 8804-0001	$20.00
Full rack width cabinet and rack mounting hardware option	add $85.00
Pink filters, Part No. 8890-0015	$78.00
Rechargeable battery option	add $315.00
Rechargeable battery kit	$325.00

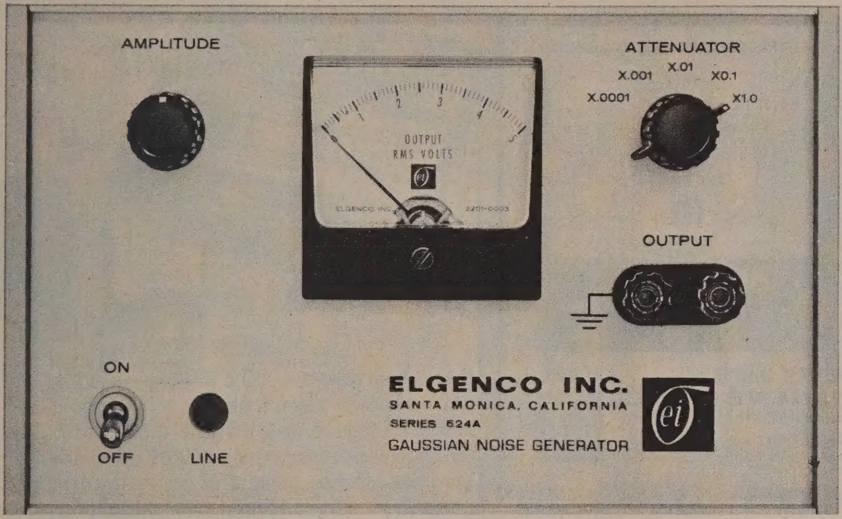
SERIES 624A FIXED RANGE • ALL SOLID STATE NOISE GENERATORS



SPECIFICATIONS • ALSO SEE FACING PAGE

FREQUENCY RANGES: See price list for a partial list of frequency ranges available.

RMS OUTPUT LEVEL: (Minimum value of maximum open circuit output) 3 volts.

OUTPUT IMPEDANCE: 200 ohms ±10%.

MAXIMUM LOAD: (on direct output) 700 ohms.

OUTPUT STEP ATTENUATOR: Five positions: X1.0, X0.1, X.01, X.001, and X.0001; calibrated to work into open circuit.

Accuracy: ±3%
Output Impedance: 200 ohms

SPECTRAL DENSITY: Approximate spectral density (mv$\sqrt{\text{Hz}}$) for 1 volt RMS output.

Accuracy	mv	Accuracy	mv
20 kHz band	5.0	200 kHz band	1.6
50 kHz band	3.1	500 kHz band	1.0
100 kHz band	2.2		

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian.

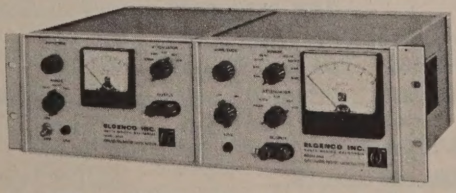
Model 602A with full rack width mounting option

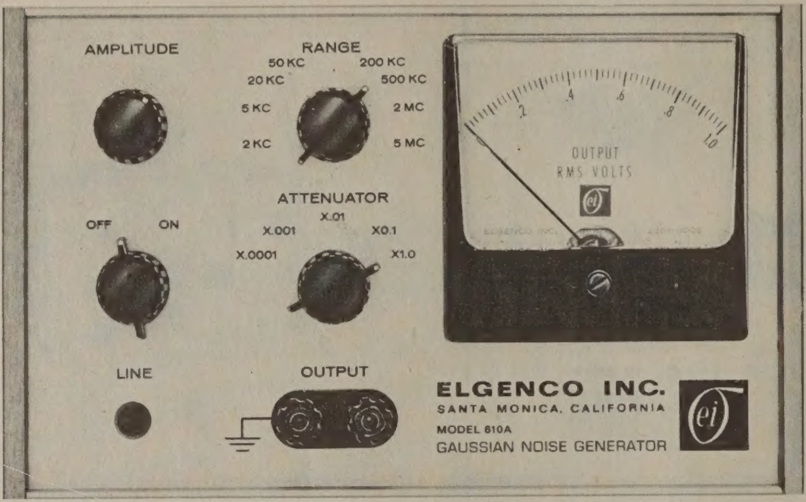


Models 602A and 610A combined by dual unit adapter kit.

ELGENCO INCORPORATED

statistical instruments for industry
DEPT. EM • HURRICANE, UTAH 84737 • (801) 635-4954

MODEL 610A • ALL SOLID STATE NOISE GENERATOR • 5Hz TO 5MHz



SPECIFICATIONS

FREQUENCY RANGES: Eight ranges selectably by front panel switch; 5 Hz to 2 kHz, 5 Hz to 5 kHz, 5 Hz to 20 kHz, 5 Hz to 50 kHz, 5 Hz to 200 kHz, 5 Hz to 500 kHz, 5 Hz to 2 mHz, and 5 Hz to 5 mHz.

OUTPUT SPECTRUM: Uniform to ±0.5 db from 10 Hz to 500 kHz and ±2.0 db from 500 kHz to 5 mHz.

OUTPUT LEVEL: 0 to 1 volt RMS, adjustable by front panel amplitude control. A dynamic range of 5 to 1 peak to RMS value is provided.

OUTPUT STEP ATTENUATOR: Five positions; X1.0, X0.1, X.01, X.001, X.0001. Accuracy ±0.1 db to 500 kHz; ±0.25 db to 5 mHz.

SPECTRAL DENSITY: Approximate spectral density for 1 volt RMS output.

Band	volts/√ Hz	Band	volts/√ Hz
2 kHz	1.75×10^{-2}	200 kHz	1.75×10^{-3}
5 kHz	1.1×10^{-2}	500 kHz	1.1×10^{-3}
20 kHz	5.5×10^{-3}	2 mHz	5.5×10^{-4}
50 kHz	3.5×10^{-3}	5 mHz	3×10^{-4}

AMPLITUDE PROBABILITY DISTRIBUTION: Symmetrical Gaussian Distribution all ranges.

OUTPUT METER: Meter reads 0 to 1 volt RMS. Accuracy ±2% of full scale to 2 mHz; ±5% to 5 mHz.

MAXIMUM LOAD: 500 ohms on direct output.

OUTPUT IMPEDANCE: Approximately 50 ohms direct output. Step attenuated output 50 ohms ±1%.

POWER SUPPLY: Built-in highly regulated dc supply.

POWER REQUIREMENTS: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac; approximately 7 watts. A rechargeable power option is available. Battery is recharged by operating unit on ac line.

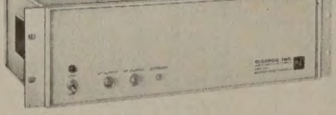
DIMENSIONS: 5¼″ high x 8⅝″ wide x 11″ deep.

RACK MOUNT: A rack mounting adapter kit is available for rack mounting two units side by side. Also available is a rack mounting adapter kit for rack mounting one unit. One or two units use 5¼″ x 19″ of rack panel space with adapter kit. Full rack width cabinet option for one unit is available. Size of unit with this option is 5¼″ high x 17″ wide x 11″ deep and comes with rack mounting hardware.

SHIPPING WEIGHT: Approximately 14 lbs.

PRICE: $1,775.00

MODELS 632A/631A • ALL SOLID STATE NOISE GENERATOR



Model 632A Dual Output DC to 400 Hz and 5 Hz to 40 kHz.. **$3,595**

LOW FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±1.0%.

OUTPUT SPECTRUM: Uniform ±0.1 db from DC to 350 Hz.

MAXIMUM OUTPUT: 1.0 volts rms. A dynamic range of 5 to 1 peak to rms value is provided.

MAXIMUM SPECTRAL DENSITY: Approx. 1.5×10^{-3} volts^2/Hz.

OUTPUT MEAN: Less than 5 mv.

OUTPUT IMPEDANCE: Approximately 1,000 ohms.

HIGH FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±2%.

OUTPUT SPECTRUM: Uniform ±0.5 db from 10 to 35,000 Hz.

MAXIMUM OUTPUT: 1.0 volts rms. A dynamic range of 5 to 1 peak to rms values is provided.

MAXIMUM SPECTRAL DENSITY: Approx. 2×10^{-5} volts^2/Hz.

OUTPUT MEAN: Less than 1 mv.

OUTPUT IMPEDANCE: Approximately 100 ohms.

NOISE REGULATOR: rms output level continuously stabilized against a reference voltage.

OVERLOAD INDICATOR: Panel overload indicator lights when input noise level to regulator is out of regulation range.

POWER: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac.

DIMENSIONS: 5¼″ high x 17″ wide x 11″ deep. 19″ wide with rack mounting flanges mounted (supplied).

Model 631A 5 Hz to 40 kHz **$2,295**

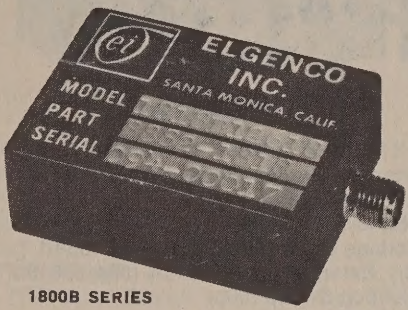
SERIAL

1800A SERIES



1800B SERIES

SPECIFICATIONS

The 1800 Series provides a low level wide band output. A portion of this band is specified to a certain flatness; uniformity. The approximate 6 mv open circuit output is for the whole band. The 1800B Series modules are the same as the 1800A series except the output is via a SMA connector. Specifications are for 25°C unless specified otherwise.

SPECTRAL DENSITY UNIFORMITY: Available with uniformity of ±0.5 db, ±1 db, ±2 db, ±3 db and ±4 db for many frequency ranges between lower frequencies of 10 kHz and 2 mHz and upper frequencies of 20 mHz, 30 mHz, 45 mHz, 50 mHz, 70 mHz, 80 mHz and 100 mHz.

SPECTRAL DENSITY: Approximately 0.3 μV per root Hz into 50 ohms.

RMS OUTPUT LEVEL: Approximately 3 mv rms into 50 ohms; 6 mv rms open circuit.

OUTPUT IMPEDANCE: Approximately 50 ohms.

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian.

OPERATING TEMPERATURE RANGE: 0 to 50°C.

POWER REQUIREMENTS: Model 1815, −15 VDC; Model 1818, −18 VDC; Model 1820, −20 VDC; Model 1822, −22 VDC; Model 1824, −24 VDC (well regulated power is required); current approximately 25 ma. Note: No external components are needed to properly install unit.

MOUNTING: .032″ printed circuit leads.

SIZE: 1.60 x 1.30 x 0.65 inches.

WEIGHT: Approximately 1 oz.

PRICING:

Base Price: 1818A.

Base Price plus $10.00: 1818B.

Base Price plus $20.00: 1815A, 1820A, 1822A and 1824A.

Base Price plus $30.00: 1815B, 1820B, 1822B and 1824B.

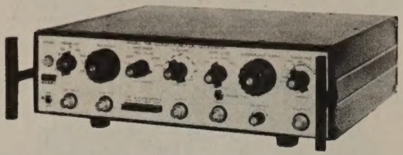
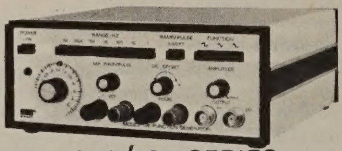
Function Generators



500 SERIES

LOW COST 5 MHz FUNCTION GENERATORS

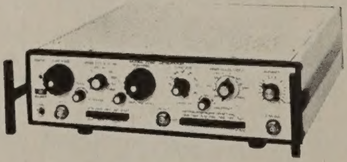
- Sine, Square, Triangle, Ramp, Pulse
- 0.01 Hz to 5 MHz (504, 506, 507)
- 0.0001 Hz to 5 MHz (508)
- VCF (Voltage Controlled Frequency) 1000:1 Manually, Externally or Internally (504, 506, 507)
- 100,000:1 Log Sweep (508)
- 20 Hz to 20 KHz Range
- 20V P-P Open Circuit, 10V P-P into 50 Ohms
- 30V P-P Open Circuit, 15V P-P-50 Ohms (508)
- Variable DC Offset, Variable Symmetry
- Gate and Trigger Modes
- Internal Sweep Generator 100 sec to 10 μ sec (506, 507, 508)
- Logarithmic Sweep Generator (507, 508)
- 80 db Attenuation, 10 db Steps, 20 db Variable
- Model 508 Uses 750 Series Frequency Dials



119/121 SERIES

FUNCTION GENERATORS

- Low Cost
- 0.2 Hz to 2.2 MHz Frequency Range
- VCF and AM Generators
- Sweep and Pulse Capability
- 600Ω and 50Ω Output Impedance
- Battery Powered Units
- 20 V P-P Open Circuit Output



7000 SERIES

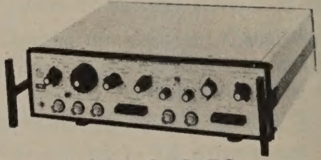
PRECISION 11 MHz FUNCTION GENERATORS

- 0.0001 Hz to 11 MHz Frequency Range
- Sine, Square, Triangle, Ramp, Pulse, ± Sine, ± Square, ± Triangle, ± Ramp, ± Pulse
- Voltage Controlled Frequency 1000:1
- Linear and Logarithmic Sweepers
- 80 db Attenuation, 10 db Steps, 20 db Variable
- AM (External Input) 360° Phase Lock (Model 7056)
- Variable DC Offset, Gate and Trigger Modes
- 30 V P-P Open Circuit 15 V P-P into 50 Ohms
- Ramp Hold, Variable Phase Start/Stop, Pulse and Burst Modes Featured on Some Models

510 SERIES

LOW COST 11 MHz FUNCTION GENERATORS

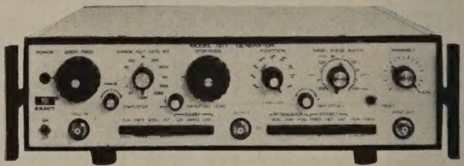
- Low Cost Instruments
- 0.1 to 11 MHz Frequency Range
- Sine, Square, Triangle, Ramp, Pulse
- VCF Generators
- Positive and Negative Ramp or Pulse Outputs
- Linear and Logarithmic Sweepers
- Select Start and Stop Frequency
- 80 db Attenuation, Variable DC Offset, Sync, Trigger
- 20 V P-P Open Circuit 10 V P-P Into 50 Ohms
- AM/FM Generator with 100% Modulation Source



120 SERIES

FUNCTION GENERATORS

- Low Cost and Precision Units
- 5 MHz Generators
- VCF Generators
- Dual Output Instruments
- Linear and Logarithmic Sweepers
- AM/FM Generator
- 20 V P-P Open Circuit 10 V P-P Into 50 Ohms
- Variable DC Offset



7200 SERIES

PRECISION 20 MHz FUNCTION GENERATORS

- 0.0001 Hz to 20 MHz Frequency Range
- Sine, Square, Triangle, Ramp, Pulse, ± Sine, ± Square, ± Triangle, ± Ramp, ± Pulse
- Voltage Controlled Frequency 1000:1
- Linear and Logarithmic Sweepers
- 80 db Attenuation, 10 db Steps, 20 db Variable
- Variable DC Offset
- 30 V P-P Open Circuit 15 V P-P Into 50 Ohms
- Gate and Triggered Mode, Triggered Sweep, Ramp Hold, Variable Phase Start/Stop, Pulse and Burst Modes Featured on Some Models

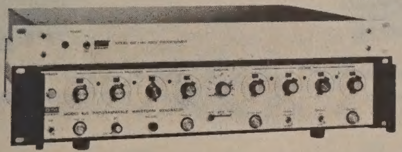
50 MHz Function Generators

NEW!!

750 SERIES

- .0001 Hz to 50 MHz
- Sine, Square, Triangle, Pulse, Ramp
- Start/Stop Frequency Dials Employing Radical New Design. Select Continuous Dial Linear or Log Mode, or High Resolution Dual Dial
- VCF (Voltage Controlled Frequency) 1000:1 Externally, Manually, or Internally with Ramp
- 30V P-P Open Circuit, 15V P-P into 50 Ohms
- Variable DC Offset, Variable Symmetry
- Gate and Trigger Modes
- 80 db Attenuation, 10 db Steps, 20 db Variable

Programmable Generators

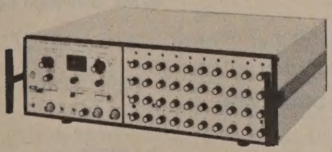


600 SERIES

PROGRAMMABLE FUNCTION GENERATORS

- 0.001 Hz to 1 MHz
- Front Panel or Remote Programming
- Sine, Square, Triangle, Ramp, Pulse
- 1 mV P-P to 9.99 V P-P Into 50 Ohms
- BCD Programming Standard
- 0.5 mSec Programming Time
- Voltage Controlled Frequency 1000:1
- 1.66 MHz and 15.99 V P-P (Remote Only)
- ASCII IEEE 488-1975 Interface Option

Waveform Synthesizers

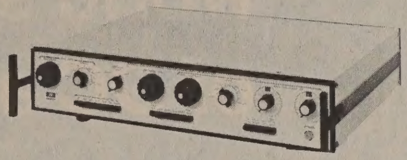


200 SERIES

COMPLEX WAVEFORM SYNTHESIZERS

- Plug-in Programmer (40 Knob or Srewdriver Adjustment)
- Digital and Analog Waveforms
- 40 Increments — Selectable
- 1 μSec to 1 Sec per Increment
- Variable Width and Variable Slope
- 20 V P-P Open Circuit, 10 V P-P Into 50 Ohms
- 60 db Attenuation, 20 db Steps, 20 db Variable
- Variable DC Offset, Gate and Trigger Modes

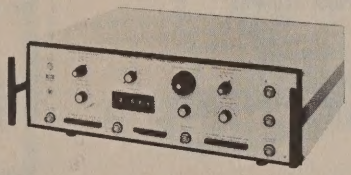
Digitally Synthesized Generators



330 SERIES

MATERIALS TESTING GENERATOR

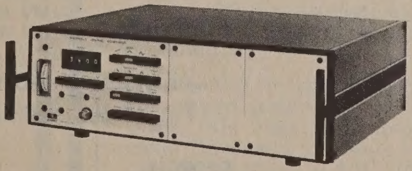
- 336 Materials Testing Generator
- 0.000001 Hz to 1 KHz, Dual Rate Ramp
- Select: First Rate, Break Point, Hold Time, Second Rate
- Gate and Trigger Modes
- 20 V P-P Open Circuit 10 V P-P Into 50Ω



VARIABLE PHASE GENERATOR

- 337 Digital Variable Phase Generator
- 0.00001 Hz to 50 KHz
- 0.2° Phase Lead Setability from 0.0° to 359.8°
- Gate and Trigger Modes
- 20 V P-P Open Circuit 10 V P-P Into 50Ω

NEW!!



340 SERIES

MATERIALS TESTING GENERATOR

- 50 μ Volt Step Resolution
- 1 msec to 99,900 Hr. Period Range
- Metered Output
- Up/Down Indicators
- Plug-in Options include:
- Model 341 Dual Rate Unit
- Model 342 Trigger Unit
- Model 343 Amplitude Control Unit
- Model 344 Variable Phase Unit

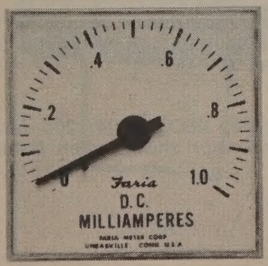
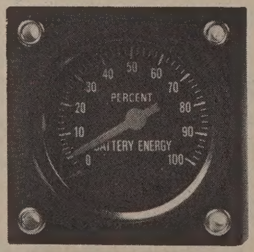
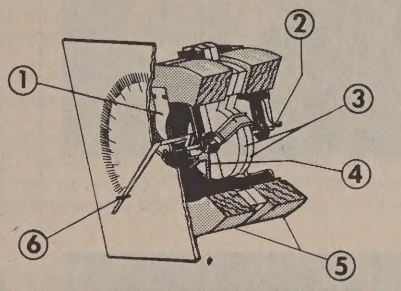
- . . . Features Contemporary Styling



ASA 2½″ METER



MILITARY-AIRCRAFT METER



1. Tension member assures constant band tension while absorbing shock and vibration to prevent band breakage.

2. Strong taut-band eliminates friction and will withstand heavy shock and vibration without damage.

3. Pole piece design assures uniform flux density from 0 to 250° deflection for better tracking.

4. Unique balance weight design assures proper balance even after heavy shock and vibration. No weight wires to shift as on other meters.

5. Large berrium ferrite magnet provides 40% more flux density than other "core magnet" designs for better torque.

6. Movement is suppressed slightly against stop peg to eliminate zero adjust. Pointer is always at zero in any position.

Field proven in the most rugged automotive and snowmobile OEM applications, this high performance 250° meter movement is featured in all the case styles shown at left. Write or call for data sheets and prices today!

FLUKE

DIGITAL MULTIMETERS

8020A

- 26 Ranges—5 Functions plus New Conductance Function for up to 10,000 MΩ Leakage Measurements
- Extensive Overload and Transient Protection
- Rugged Construction—1 Year Warranty
- Hi/Lo Power Ohms for In-circuit Resistance and Diode Testing
- 10 MΩ AC/DC Input Impedance Doesn't Load Circuit
- 200 Hour, 9V-Battery Life—Low Battery Indicator
- Large LCD Readout—2000 Counts
- 1 Year Calibration Cycle—Only 3 Adjustments
- One Hand Operation
- Complete with Battery and Test Leads

The new Fluke 8020A continues the standard of excellence set by the highly successful 8000A multimeter family. Many features set the 8020A apart as a truly exceptional instrument. Twenty-four ranges and 5 functions include measuring capability up to 1100V dc, 750V ac, 2A ac/dc and 20 MΩ. HI/LO ohms are included for in-circuit resistance and diode test capability. In addition, a new Conductance function allows resistance and leakage measurements up to 10,000 MΩ, a must for circuit board work and component checking.

The 8020A has been designed with the user in mind and features exclusive one-hand operation. For harsh service environments, the 8020A has a ruggedized case and extensive overload/transient protection backed up by a 1-year warranty. Long term stability (1-year calibration cycle) is excellent with only three cal adjustments. Up to 200 hours of continuous operation can be expected from a single 9V alkaline battery.

BASIC SPECIFICATIONS

	DC Volts	AC Volts	DC Current	AC Current	Ohms	Conductance[5]
Range	0.2-1000V	0.2-750V	0.002-2A	0.002-2A	200Ω-20 MΩ	200 nS, 2 mS
Resolution	100 μV	100 μV	1 μA	1 μA	0.1Ω	0.1 nS
Accuracy[1]	(0.25 + 1)	(0.75 + 2)[2]	(0.75 + 1)	(1.5 + 2)[3]	(0.2 + 1)[4]	(0.3 + 1)[6]

[1] Accuracy for 1 year, ±(% Input + No. of digits), 18°C to 28°C

[2] Except 750V range, (1.0+2)

[3] Except 0.002A range, (2.0+2)

[4] Except 200Ω range, (0.3+3); 20MΩ range, (2.0+1)

[5] Conductance is the inverse of ohms (1/Ω) and is expressed in Siemens (S), formerly the mho. A decrease in conductance units is the same as an increase in resistance. Use of the conductance function allows very high equivalent resistance measurements, e.g., a 2 nS reading on the 200 nS range equals 500 MΩ.

[6] Except 200 nS range, (2.0+10)

GENERAL

Number of Digits:	3½ (2000 count), autozero, autopolarity
Operating Temperature:	0°C to 50°C
Temperature Coefficient:	0°C to 18°C, 28°C to 50°C; less than 0.1 times the applicable accuracy spec per °C
Input Impedance:	10 MΩ, all voltage ranges
Overload Protection:	Protected up to 1000V dc/750V rms on respective voltage ranges, to 2A on current shunts, to 300V dc/rms for both resistance and conductance.
Calibration Cycle:	1 Year
Power Requirements:	9V battery, transistor type, NEDA 1604; 200 hours life typical with alkaline; indicator shows when battery has 10% of life remaining.

8030A

- Measures AC/DC Volts, Current and Resistance
- True RMS on all AC Functions
- Diode Test
- In-Circuit Resistance Measurement
- Overload Protection on all Functions
- Functional Self Check

Model 8030A is a 3½ digit, six-function hand-held multimeter with features that qualify it as an excellent field service and troubleshooting instrument. Measurement functions include ac volts, dc volts, ac current, dc current, resistance and diode test. Each function, with the exception of diode test, has five selectable ranges for a total of 26 ranges (one range for diode test).

True RMS conversion techniques offer high accuracy for noise and other distorted waveforms. AC coupling rejects dc bias during ac voltage measurements. DC coupling is used on the ac current ranges to provide the ac and dc capability necessary for measuring power supply and SCR regulator currents.

In-circuit resistance measurements can be made using the normal resistance ranges. Parallel semi-conductor junctions are ignored by impressing less than 200 mV across the unkonwn resistance.

The diode test function allows measurement of diode and transistor forward voltage drops. A 1 mA bias current is forced through the junction, and the resultant voltage drop is displayed in millivolts.

Durability in the field is assured by extensive input overload protection, rugged, shock-resistant mechanical design, and the use of disposable alkaline batteries. A battery eliminator is also provided for ac line operation. Optional power configurations include rechargeable nickel-cadmium batteries and choice of 100V ac, 115V ac, or 230V ac battery eliminator/chargers.

SPECIFICATIONS

	DC Volts	AC Volts	DC Current	AC Current	Ohms	Diode Test
Range	0.2-1100V	0.2-750V	200μA-2A	200μA-2A	200Ω-2000kΩ	0-2000 mV[4]
Resolution	100 μV	100 μV	100 nA	100 nA	0.1Ω	—
Accuracy[1]	(0.1 + 1)	(0.5 + 2)[2]	(0.35 + 1)	(1 + 2)[3]	(0.4 + 1)	(0.2 + 1)

[1] Accuracy for 1 year, 18°C to 28°C, ±(% Reading + No. of digits)
[2] From 5% of range to full range, 45 Hz to 1 kHz
[3] From 5% of range to full range, 45 Hz to 5 kHz, 200 mA and below
[4] At nominal 1 mA test current

Ordering Information

8030A	DMM with disposable batteries, battery eliminator and test leads
8030A-01	DMM with rechargeable batteries, battery charger/ eliminator and test leads
8030A-03	DMM with disposable batteries and test leads

8040A

- Five Functions, 26 Ranges
- 0.05% Basic DC Accuracy
- True RMS on all AC Measurements
- Selectable Manual or Auto Ranging
- 10 MΩ Input Impedance
- 1100V Overload Protection

The 8040A is a portable 4½ digit, five-function digital multimeter featuring the capabilities of more sophisticated bench instruments while retaining the size of a handheld VOM. Measurement functions include ac volts, dc volts, ac current, dc current and resistance. A total of 26 ranges is provided, five each for ac and dc volts, five each for ac and dc current, and six for resistance measurements. To ensure optimum accuracy when measuring other than pure sinusodial inputs, all ac measurements are made using True RMS conversion techniques. Ranging is switch selectable as well as automatic as a convenience feature to guarantee optimum resolution.

Model 8040A is the smallest autoranging digital multimeter in its class, with rugged mechanical design and overload protection features similar to those found in the 8030A. The 8040A uses disposable alkaline batteries and includes a battery eliminator for ac line operation. Optional power configurations include rechargeable nickel-cadmium batteries and choice of 100V ac, 115V ac or 230V ac battery eliminator chargers.

SPECIFICATIONS

	DC Volts	AC Volts	DC Current	AC Current	Ohms
Range	0.2-1100V	0.2-750V	200 μA-2A	200 μA-2A	200-20MΩ
Resolution	10 μV	10 μV	10 nA	10 nA	0.01Ω
Accuracy[1]	(0.05 + 2)	(0.5 + 10)[2]	(0.3 + 3)	(1 + 10)[3]	(0.2 + 3)

[1] Accuracy for 6 months, 18°C to 28°C, ±(% Reading + No. of digits)
[2] From 5% of range to full range, 45 Hz to 10 kHz
[3] From 5% of range to full range, 45 Hz to 20 kHz

8000A

The versatile 8000A Digital Multimeter offers a wide range of measurement capability through its excellent specifications and complete selection of options and accessories. Special versions of the 8000A, now available as standard units, expand the applications served by this outstanding DMM.

SPECIFICATIONS

	DC Volts	AC Volts	DC Current	AC Current	Ohms
Range	0.2-1200 V	0.2-1200 V	200 μA-2 A	200 μA-2 A	200 Ω-20 MΩ
Resolution	100 μV	100 μV	100 nA	100 nA	0.1 Ω
Accuracy[1]	(0.1+1)	(0.5 +2)	(0.3+1)	(1+2)	(0.2+1)

[1] Accuracy for 1 year, ±(% Input + No. of Digits), 15°C to 35°C

OPTIONS

RECHARGEABLE BATTERY PACK—
8000A-01
The rechargeable battery pack is entirely self-contained within the 8000A package. It is supplied with standard "D" sized nickel-cadmium batteries which provide, under normal conditions, 1000 discharge-charge cycles of operation. The battery pack will provide a minimum of eight hours operation, with recharge requiring less than 14 hours. Recharging is automatic whenever unit is plugged in and does not affect normal bench operation.

DATA OUTPUT—
8000A-02
The data output option provides parallel, buffered BCD data of the digital readout, polarity and overload. It is suitable for driving a digital printer or providing input to systems. The non-isolated buffered output will sink up to 10 mA of current and has a 15 kΩ pull-up resistor.

HIGH CURRENT—
8000A-05
The Fluke 8000A-05 Digital Multimeter offers extended current measurement capabilities to 20 amps with the -05, line, and -015, battery, options.

All of the specifications for the basic 8000A apply to the 8000A-05, -015 plus the following current specifications:

Range (DC)	10.00 A (1 min. operation 10 A to 20 A)
Accuracy (DC)	10 A Range ±(0.5% of reading + 1 digit)
Range (AC)	10.00 A (1 min. operation 10 A to 20 A)
Accuracy (AC)	10 A Range 45 Hz to 3 kHz ±(1% of reading + 2 digits)

LO OHMS—
8000A-06
The Model 8000A-06 features 0.001Ω resolution and 2 ohm and 20 ohm resistance ranges. The instrument includes a front panel lead resistance cancellation control assuring the user that his measurement of the unknown R does not include the resistance in his test leads. All basic 8000A specs apply plus the following:

Range	1.999 Ω, 19.99 Ω
Accuracy	1.999 Ω range ±(1% of rdg +2 dig)
(1 yr, 15°C-35°C)	19.99 Ω range ±(0.5% of rdg +2 dig)

MILLIAMP-SECONDS—
8000A/MAS
The 8000A/mAS (or Mass Meter) calibrates x-ray tubes by directly measuring current, as a function of time. Addition of mA-sec function has extended overall measurement capability to 31 ranges of ac/dc volts and current, resistance and mAS.

Ranges	2000, 200, 20, 2 mA sec and 200 μA sec.
Accuracy	±(1% of input + 1 digit)

ANALOG METER—
8000A/MTR
The Fluke Model 8000A/MTR is similar to the Model 8000A but also includes an analog panel meter and rechargeable batteries.

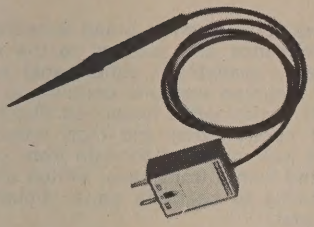
This instrument provides 26 ranges including five ranges each of ac and dc voltage, five ranges each of ac and dc current and six ranges of resistance. The analog panel meter included in the unit is invaluable for peaking or dipping measurements. The panel meter also serves to monitor battery level.

HIGH VOLTAGE—
8000A/HV
The Model 8000A/HV Digital Multimeter is similar to the popular Fluke 8000A with the addition of transient voltage protection on all ac/dc voltage ranges. The instrument will withstand transient voltages up to 6000 volts, 10 microseconds in duration, with a maximum duty cycle of 60 transients per second.

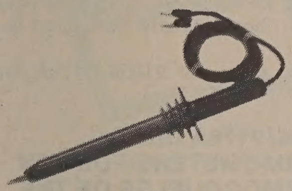
Call toll-free 800-426-0361, John Fluke Mfg. Co., Inc.,
P.O. Box 43210, Mountlake Terrace, WA 98043.

FLUKE

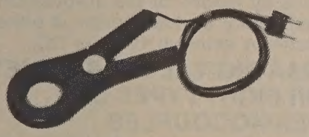
VOLTMETER ACCESSORIES



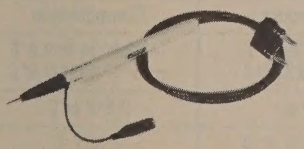
80T-150



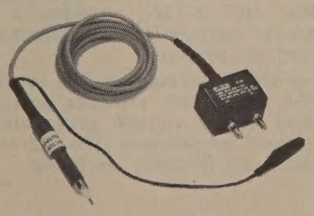
80K-40



80I-600



81RF



82RF

80T-150 Temperature Probe

- Converts DC Voltmeters and Stripchart Recorders to Thermometers
- Wide Temperature Range, −50°C to +150°C or −58°F to +302°F
- Reads Out Directly in Degrees (1 mV DC/°)
- 350V Standoff Allows Measurements in Live Electrical Circuits
- Fast Responding/Low Thermal Mass

The 80T-150 converts dc voltage measuring instruments into direct reading thermometers. It is ideal for a wide range of design, trouble-shooting and evaluation applications and is compatible with surface, ambient and liquid uses. Surface measurements are particularly applicable since no surface preparation is required as with thermocouples. For liquid measurements, recommended applications range from water, lubricants and fuels to most solvents. Liquids with levels as shallow as ½″ can be measured since the temperature sensor is in the probe tip.

For the electronics designer, both device temperatures and local ambients can be quickly monitored to confirm difficult thermal calculations. The troubleshooter will find the probe's direct temperature output a convenient way to attach "hard numbers" to those service problems which show up as overheated components and hot spots. The probe's 350V dc standoff ability makes it much safer than the time honored "hot finger test." A host of non-electronic applications range from air conditioning servicing to lubricant preparation. Send for Application Bulletin AB-28.

SPECIFICATIONS

Range (field selectable by internal jumpers):	−50°C to +150°C or −58°F to +302°F
Accuracy (including nominal 0.25% dc measuring instrument error):*	
+15°C to +35°C (ambient)	±1°C (1.8°F) 0°C to 100°C, decreasing linearly to ±3°C (5.4°F) at −50°C and +150°C
0°C to +15°C and +35°C to +50°C ambient:	Add 1°C (1.8°C) to above
Sensitivity (80T-150 output):	1mV dc/°C or 1mV dc/°F
DC Measuring Instrument Capability	
Input Resistance:	Rated accuracy is achieved with a ≥ 1MΩ input R instrument although operation down to 100K is possible with additional error.
Instrument Type:	With probe output in millivolts/degree, a DMM provides the most convenient readout. For example, a 3½ digit DMM with a ±150 mV range will resolve any centigrade reading to 0.1° (e.g., 150.0 mV = 150.0°C). A FET voltmeter with adequate sensitivity and a dc polarity switch can also be used. Also, strip chart recorders provide a convenient way of looking at temperature trends.
Voltage Standoff:	350V dc or peak ac.
Settling Time:	5.5 seconds to settle within 2° for a 50° change
Output Termination:	Standard ¾″ spaced double banana plug
Power:	Internal disposable battery; 1,000 hours continuous use.

*Additional voltmeter error adds directly to overall measurement uncertainty.

80K-40 General Purpose High Voltage Probe

The 80K-40 is a handheld probe for general purpose HV measurements up to 40 kV. Accuracy and stability of the 1000:1 division ratio is ensured by special metal film resistors having matched temperature coefficients. This unique probe offers an unusually high input impedance to minimize loading of the circuit under test.

(80 K-40) Voltage Range	1 kV to 40 kV.
Input Resistance	1000 MΩ
Ratio	1000:1
Overall Accuracy	20 kV to 30 kV ±2% (Calibrated 1% at 25 kV).
Upper Limit	Changes Linearly from 2% at 30 kV to 4% at 40 kV.

80I-600 AC Clamp-on Current Transformer

The 80I-600 is designed to extend the ac current measuring capabilities of DMM's up to 600 amperes by use of a 1000:1 division ratio. A clamp-on transformer design allows measurements to be made without breaking the circuit under test. Because of the 80I-600's high efficiency and quadrature type of winding, wire size and location of the conductor within the transformer jaws do not affect accuracy of the current measurement.

Range	2A-600A.
Frequency Response	30 Hz - 1 kHz
Accuracy	±3%
Division Ratio	1000:1.

81RF, 82RF RF Probes

	82RF	81RF
Frequency Response	100 kHz to 100 MHz; ±1 dB	100 kHz to 200 MHz: ±1 dB 200 MHz to 500 MHz; ±3 dB
Extended Response (Useful for relative readings)	20 kHz to 250 MHz	200 kHz to 700 MHz
Voltage Range	0.25 V to 30 V RMS 350 VDC Max.	.25 V to 30 V RMS 200 VDC Max.

Physical Accessories

Carrying Cases, Dust Covers, Rack Mounting Hardware, Test Leads are included in the complete line of physical accessories available to protect or enhance the convenience of your Fluke instrument. Ask for the "Digital Voltmeter Accessories" data sheet.

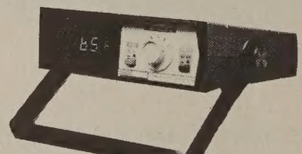
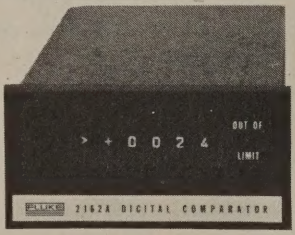
2166A



2168A

2175A



2162A

EXT
FLUKE 2161A MULTIPOINT SELECTOR

2161A

2160A/2170A SERIES

The 2160A and 2170A series Digital Thermometers complement a broad temperature measurement capability that offers unique performance and features to the user. Temperature resolution of 1 degree and 0.2 degree is available in either panel mount or portable bench models. The compact panel mounted versions conform to DIN Standards and are designed for use in industrial enviroments. Advanced Fluke LSI technology means low parts count, low power consumption and high reliability. Temperature scale selection (°F or °C) is easily accomplished through front panel access to a jumper plug on panel mount units and with a front panel switch on the bench models. A further convenience is the ability to calibrate panel mount instruments in place without removal from the panel.

Fluke specifies accuracy in a unique manner. The Total Instrument Accuracy approach gives the accuracy in real terms, °F and °C, and takes operating time and ambient temperature into account. Total Instrument Accuracy gives the user a clear picture of operating accuracy instead of the usual calibration accuracy.

Superior conformity to NBS curves is achieved with 48 straight line segments which have been computer optimized for best possible fit for each thermocouple type. All models feature a high intensity LED display. Open thermocouple indication is provided by a blinking display on all models.

OEM purchase agreements are available on Fluke's line of 2160A/2170A line of thermometers.

2160A/2170A DIGITAL THERMOMETER FOR SINGLE-TYPE OF THERMOCOUPLE

The 2160A and 2170A are panel mounted four-digit 1°F/C or 0.2°F/C, respectively, thermocouple thermometers capable of resolving over the temperature span of any of eight thermocouple types.

2165A/2175A DIGITAL THERMOMETER FOR SINGLE-TYPE OF THERMOCOUPLE

The 2165A and 2175A are portable single-point instruments housed in rugged bench mount cases. They can be equipped with rechargeable batteries for complete portability.

2166A/2176A DIGITAL THERMOMETERS FOR TEN THERMOCOUPLES OF THE SAME TYPE

The 2166A and 2176A are bench type instruments with the capability of monitoring up to ten thermocouples of the same type. Thermocouple channel selection is by means of the 10-position front panel rotary switch. Power is either line voltage or external 12 volts DC.

2168A DIGITAL THERMOMETER FOR EIGHT TYPES OF THERMOCOUPLES

The 2168A is a portable, single-point instrument capable of accepting any one of eight thermocouple types as an input.

SPECIFICATIONS

	2160A SERIES	2170A SERIES
Type of Temperature Sensor	Thermocouple	Thermocouple
Temperature Range (Dependent on Thermocouple Type)	−328° to 3999°F −200° to 2328°C	−99.8° to 999.8°F −99.8° to 999.8°C
Resolution and Repeatability	1°F or C	0.2°F or C
Thermocouple Types	J, K, T, E, R, S, B, C	J, K, T, E

OPTIONS

2161A—Panel mounted, multipoint switch unit for use with 2160A and 2170A. Provides rotary switch selection of ten additional thermocouple inputs of the same type. An eleventh switch position permits cascading 2161A units.

2162A—Panel mounted digital comparator compatible with 2160A and 2170A. Six thumbwheel switches provide single high or low limit or on/off control. Relay output provides for external control. Units may be cascaded for a dual limit.

01—Rechargeable battery pack for use in 2165A and 2175A. Mounts inside instrument to provide continuous 8-hour operation.

02—Field installable option, integral to 2160A and 2170A, provides a BCD, character parallel isolated output of displayed temperature.

04—Field installable option, integral to 2160A and 2170A, provides an isolated analog output voltage proportional to displayed temperature. The -02 and -04 options are mutually exclusive.

ACCESSORIES

Field conversion using of thermocouple type is readily achieved by the appropriate conversion kit. Thermocouple probes are available in the common J, K, and T types. Carrying cases, dust covers and rack mounting hardware are also available to protect and enhance the convenience of your Fluke instrument. Ask for the 2160A/2170A Data Sheet.

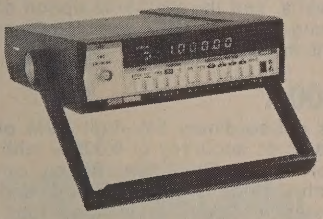
FLUKE

MULTIFUNCTION COUNTER



1900A

1900A

Fluke's versatile 1900A multifunction counter provides frequency, period, period averaging, and totalize measurements over a wide range of applications. In frequency mode, the 1900A verifies the accuracy of signal sources such as generators, oscillators and transmitters. Period mode provides the time duration of a single input cycle, which allows high resolution of low frequency measurements. In period average mode, the counter averages cycle time over 10, 100 or 1000 cycles for still finer resolution. Totalize mode is similar to frequency mode except that the signal gate is left open permanently, a feature useful for totalizing the cycles in a single RF burst or counting electromechanical relay contact bounce.

SPECIFICATIONS

INPUT CHARACTERISTICS

Sensitivity:
25 mV, typically 15 mV rms sine wave, 5 Hz to 80 MHz.

Impedance:
1 MΩ shunted by less than 30 pF.

OPERATING RANGES

Frequency:
5 Hz to 80 MHz. Four manually selected gate times provide resolution of 100 Hz to 0.1 Hz in decade steps.

Period:
5 Hz to 1 MHz single and multiple period averages provide resolution of 100 ns to 100 ps.

Totalize:
1 count to 999999 counts.

TIMEBASE CHARACTERISTICS

Aging Rate:
$<\pm5 \times 10^{-7}$ per month.

Temperature:
$<\pm5 \times 10^{-6}$, 0°C to 50°C.
$<\pm2 \times 10^{-6}$ (typical), 20°C to 30°C.

GENERAL

Display:
6-digit LED, leading zero suppression, annunciation and overflow.

AUTORANGING: In both frequency and period modes, autoranging includes a unique 20% hysteresis in its switching thresholds, to eliminate redundant up range/down range commands. This allows measurements to be made on signals containing large amounts of FM and PM.

AUTORSET: A new measurement sequence is started every time a front panel button is activated.

OPTIONS

1900A-01—Rechargeable Battery.
1900A-02 Data Output.

ACCESSORIES

A53 Whip Antenna
C80 Carrying Case, Soft Vinyl
C86 Carrying Case, Molded Plastic

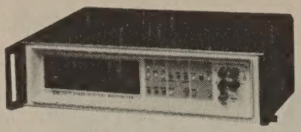
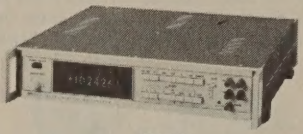
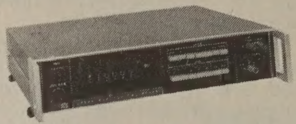
DIGITAL VOLTMETERS



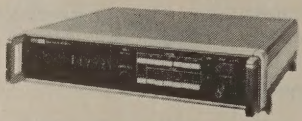
8500A



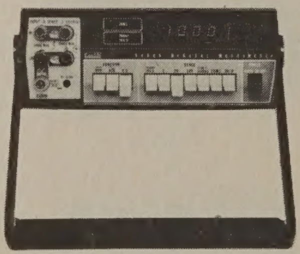
8375A



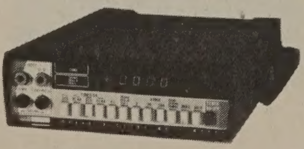
8400A



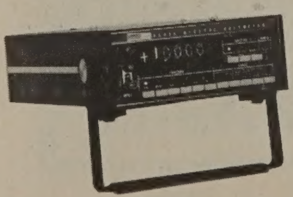
8300A



8800A



8600A



8200A

8500A

The Model 8500A incorporates a microprocessor and bus system providing the ultimate in speed, accuracy, versatility and reliability. This 5½ digit instrument provides five ranges of dc with a resolution of ±1 μV and ±1200V maximum. Mid range basic dc accuracy is 10 ppm for 90 days at 23°C ±5°C.

The Model 8500A can make 500 readings per second when externally commanded via a system interface. DC zero is automatic with the push of a front panel button. With the calibration memory option, recalibration can be accomplished entirely from the front panel in about ten minutes time. The basic instrument includes full autoranging, dc/dc ratio, automatic dc zero, and a unique offset feature which allows measurements of deviation from any stored value.

A wide range of systems options include IEEE 488; bit serial; or duplex register, 16 bit parallel/character serial. Analog options include true rms or average ac volts, 4-wire ohms, ac and dc current and calibration memory.

8375A

The 8375A offers unusual capability in a 5½ digit multimeter. At a very low cost, its standard configuration combines highly accurate measurement of dc volts, true-rms ac volts and broad ranges of resistance, together with a unique self-test feature that permits rapid check-out of all measurement functions. In addition, a powerful set of systems-oriented options are available, all of which can be readily installed in any desired sequence in the field, including Data Output, Remote Control and DC Reference.

8400A

The 8400A's outstanding accuracy is complemented by numerous and versatile functional capabilities. DC voltages are measured on five ranges with resolution to 1 microvolt. Overrange is 20% on all ranges except on the ±1,000 V range. 1100 V can be applied to any voltage range without damaging the unit.

The basic DVM accepts a family of rugged plug-in option cards for AC Volts, Resistance, DC/DC Ratio, True RMS Volts, Data Output and Remote Control.

8300A

The 8300A is a versatile digital voltmeter with five full decades of digits plus a 6th digit for 20% overrange. Its mainframe will accept options in any sequence for expansion from a bench DVM into a bench or systems multimeter.

The basic instrument offers 3 ranges of DC voltage measuring capability including autorange, autopolarity, and switchable active filtering. In addtiion, the 8300A-10 option offers 5 ranges of dc volts, and the 8300A-02 option offers 5 ranges of dc volts and 5 ranges of ohms measurements.

8800A

This extraordinary 5½-digit DVM offers a basic dc accuracy of 0.005% with full autoranging. There are fifteen ranges which include five dc, four ac, and six resistance. Complete isolated four terminal ohms measurements are provided on all ranges. Separate current and voltage inputs are available to provide the ultimate in ohm accuracy by eliminating errors caused by input lead resistance. LED readout is bright and readable. Features isolated Data Output option 8800A-02.

8600A

Fluke 8600A DMM includes a 4½-digit LED readout featuring five ranges of dc volts, five ranges of ac volts, five ranges of dc current, five ranges of ac current and six ranges of resistance. With 26 ranges, the instrument offers more measure power than any other instrument available. **Autorange** and **autozero** are standard. Options include Battery Pack (8600A-01) and Isolated Data Output (8600A-02).

8200A

The Model 8200A four range dc DVM easily expands into a 400 readings per second systems multimeter by installing a family of plug-in options. Standard features of the basic instrument include 60% overrange, switched filter for assured broadband noise rejection, all push button selection, autoranging polarity selection and display as well as full guarding.

DATA LOGGERS

The Summa II Series Data Logger provide a wide range of data logging features and options through the 2200A and 2240A main frames and option complements. Microprocessor implementation and Fluke's time honored low level signal and temperature measuring expertise combine to produce a data logging system which embodies the following features:

- Complete interactive key board programming of range, function, skip and limits.
- Resolution to 1μV and .1°.
- Scan 1 to 1000 points, up to 60 in the mainframe.
- Mix voltages, thermocouples and thermocouple types on adjacent channels.
- Multiple scan modes - continuous limits monitoring, interval scan, delayed interval scan and monitoring channel.
- Keyboard selectable scan interval (1 second to 24 hours).
- Displays date, time, data, channel identification, function and polarity.
- Display monitor. channel without interrupting scan.
- Internally selectable scanning rates (3 or 15 channels per second).
- Thermocouple conditioning.
- Complete Program List printout.
- Alarms output.
- 6 digits fixed data.
- Digital inputs.
- Field expandable.
- Reference voltages for self check.
- Switch selectable output formats.
- Clock; Days - Hours - Minutes - Seconds.

SPECIFICATIONS

Inputs	Ranges	Data Logger 2240A	Data Logger 2200A	Options Required*

*In addition to options listed, one scanner and one a/d converter (not listed) are required to establish a functioning data logger system. Ask for the Data Logger data sheet for complete details.

DIGITAL THERMOMETERS

The 2100A Digital Thermometer series satisfy a wide variety of temperature measuring applications. Versatility ranges from a systems instrument capable of monitoring up to 100 different thermocouples and outputing data to a digital recorder or computer, to a fully portable battery operated instrument able to take measurements from any type of thermocouple as well as having two direct mV ranges, with resolution of 0.1 degree.

2100A-03

Used to measure the temperature of a single thermocouple of a predetermined type.

2100A-10

Same basic unit as the 2100A-03 but with the addition of 11 manual switches on front panel. This allows up to 10 thermocouples of the same type to be connected to the instrument, one at a time.

2100A-06

Same basic units as the 2100A-03 but with the addition of 8 select switches on front panel. Any one of the six available thermocouple types can be selected.

2150A

The 2150A is a multi-point switch unit. Up to 30 thermocouples can be connected to each unit and units can be connected in series to allow up to 100 points to be monitored by one measuring instrument.

COUNTERS

The Fluke line of electronic counters provides time and frequency measurement capability in the range of dc to 1250 MHz. Designed to meet and exceed the stringent accuracy and stability demands placed on today's digital measurement equipment, Fluke counters are reliable, cost effective and competitive. Included in the Fluke line are counters designed for laboratory and field, in both systems and bench applications.

SIGNAL SOURCES

Fluke signal generators incorporate advanced microprocessor techniques which greatly reduce their size while increasing their overall capability, flexibility and range of application. Cumbersome front panel knobs have been replaced by a universal calculator keyboard enabling free-form entry of volts, millivolts, dBm, Hz, kHz and MHz. Frequencies and levels can be stored and recalled for repetitive testing. Ranges are set automatically for best resolution and programmable limits prevent damage to unit under test.

Fluke synthesizers employ both the direct and indirect approach to frequency synthesis and exhibit exceptional accuracy. stability, spectral purity and resolution.

CALIBRATORS AND STANDARDS

The manufacture of precision test and measurement instruments such as those designed and produced by Fluke requires the measurement and generation of electrical quantities with predictable accuracy, traceable to an industry-accepted reference facility such as the National Bureau of Standards. Fluke's own need for such traceable calibration methods has given rise to development and production of a complete line of voltage and current calibrators, ac and dc reference standards and dc calibration systems, used throughout the world by instrument users and manufacturers in the test and calibration of their own products.

Fluke ac and dc calibrators and standards supply stimulus values for a wide range of precision calibration needs. They are exceptionally stable sources designed with high accuracy and low noise while having extremely low drift rates. Outputs from the calibrators are selected using front panel switches which allow direct dial-out of the full range of output values. The accuracy and resolution of these instruments can satisfy the most critical requirements for a precision calibration or voltage reference source.

Fluke ac and dc voltage and current calibrators combine ruggedness and reliability with extreme accuracy and stability. The results are standards lab instruments with full capability for use in the calibration lab or on the production line.

[4] Operates to 1200V using companion model 5215A power amplifier

DIFFERENTIAL VOLTMETERS

Seven models of differential voltmeters are currently available from Fluke. All models are solid-state instruments. Standard features include full overload protection, a single meter scale for all modes and ranges, and long-term accuracy. A rechargeable battery pack for portable operation and a recorder output are either standard or optional for most of the differential voltmeters.

The inherent characteristics of the differential voltmeter satisfy a number of measurement requirements encountered in the laboratory environment. Among these are infinite input resistance at null, analog meter detection of small voltage changes or excursions. and accurate comparision of two or more voltages.

HIGH VOLTAGE POWER SUPPLIES

All Fluke power supplies combine the high reliability of silicon transistor amplifiers with the high voltage capability of series pass tubes to provide conservative voltage and current ratings. Supplies feature extremely low ripple and excellent regulation. Outputs are available at both front and rear panels. All models are protected against overcurrent by an adjustable circuit that disables the supply when output current exceeds the rated value.

MEGOHMMETERS

Freed can supply a complete range of insulation resistance measuring equipment with fixed and variable d.c. test voltages from 5 to 2500 volts. Insulation and leakage measurements can be made on transformers, motors, cables, electronic assemblies and components, dielectric materials, electrical appliances and tools, capacitors and resistors.

Type	Resistance Range	Test Voltage	Accuracy	Power Requirements	Size and Weight	Price
1620	0.1 to 4,000,000 megohms 1 to 2,000,000 megohms @ 500 volts	Variable 50 to 1000 volts d.c.	±5% at full scale	105-125 volts 50-60 cycles	15″ x 9″ x 7½″ 24 lbs. •	400.00

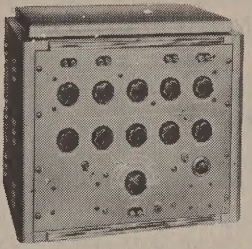
FREED TRANSFORMER CO., INC.

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without super-imposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.



1110-C

Type	Inductance Range	Conductance Range	Frequency Range	D.C. Current	Accuracy	Dimensions and Weight	Price
1110-C	1111.1 h to 1 mh 5 decades 1.1 h to 1 μh 2 decades	0.015 μmho—100 mho "Q" = 600 max @ 100 cycles	20 cycles to 10KC	up to 2 amperes	±0.5% to 5 KC ±2% to 10 KC	21¾" x 17½" x 15¼" 50 lbs.	695.00
1115	111.1 h to 100 μh 5 decades 0.11 h to 0.1 μh 2 decades	0.15 μmho—1000 mho "Q" = 600 max @ 100 cycles	20 cycles to 10 KC	up to 15 amperes	±1% to 5 KC ±3% to 10 KC	21¾" x 28" x 15¼" 80 lbs.	995.00
1185	111.1 h to 100 μh 5 decades 0.11 h to 0.1 μh 2 decades	0.15 μmho—1000 mho "Q" = 600 max @ 100 cycles	20 cycles to 10 KC	up to 30 amperes	±1% to 5 KC ±3% to 10 KC	21¾" x 33¼" x 15¼" 100 lbs.	1395.00

NULL DETECTOR

Sensitive null detector for bridge measurements, with self contained selective filters to limit the amplifier characteristics at various bridge measuring frequencies.

1140-B

Type	Sensitivity	Frequency Range	Filter	Power Requirements	Dimensions and Weight	Price
1140-B	10μ volts @ 1 KC for 15% meter deflection filter in	20 to 20,000 cycles	Fixed 60, 400, 1000 cycles Adjustable ±5% of center Other frequencies available	105-125 volts 50-60 cycles	Cabinet 12" x 8½" x 10"—18 lbs. Rack—19" x 6" x 10"	290.00

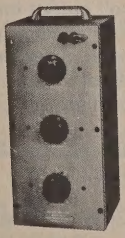
D.C. SUPPLY

A constant voltage transformer regulated current source designed for use with the Freed Incremental Inductance Bridges. Solid state bridge rectification, L-C filters and low internal impedance provides good current regulation with a minimum of circuit complexity.

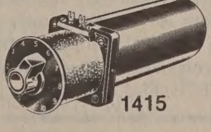
Type	Current Ranges	Voltage Ranges	Regulation	Power Requirement	Dimensions and Weight	Price
1170-A	4 ranges, 0-5, 25, 100 and 1000 milliamperes	Maximum no load voltage 1000 Ma, 270V, 100 Ma, 270V 25 Ma, 85 V, 5 Ma, 48 V	± 1% for line variation 105-125 V	105-125 volts 60 cycles	19" x 10½" x 13½" 66 lbs.	375.00

DECADE CAPACITORS

The Freed series of Decade Capacitors cover a wide range of values and can be supplied as individual decades from 0.0001 PF. per step to 1 mf. per step or in various combinations of assembled decade boxes. All capacitors are non-inductively wound and heat treated for stability.



1250



1415

Type	Total Capacity	Dielectric	Dissipation Factor	Accuracy	Dimensions and Weight		Price

1352	1.111 μf in steps of 0.0001 μf	Polystyrene	<0.0002	±1%	19" x 5¼" x 10"	13 lbs.	335.00
1353	11.111 μf in steps of 0.0001 μf	Mylar Polystyrene	<0.005	±1%	19" x 5¼" x 10"	14 lbs.	395.00

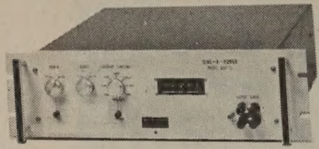
Maximum operating voltage, 500 VDC or peak. Capacitors can be supplied to better than ±1%, write for complete information.
In addtion to listed equipment, Freed manufactures a complete series of decade inductors, AC and DC regulated power supplies, comparison and limit bridges.
Write for complete catalog.

GENERAL RESISTANCE INSTRUMENTS

PRECISION INSTRUMENTATION

GENERAL RESISTANCE INSTRUMENTS

PROGRAMABLE/MANUAL ULTRA-HIGH ACCURACY POWER SUPPLIES



DIAL-A-POWER™ SERIES

Contrary to popular practice in the power supply field, when you set the five decade dials of the DAP to the output you desire, that's the output you get, ±0.01%. This is because our accuracy statement includes **all** the parameters that contribute to power supply inaccuracies.

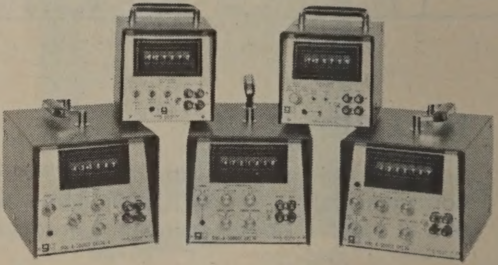
Resolution is 100µV on the 10V range; 1mV on the 100V range. Select a model with remote programing and/or manual operation.

OUTPUT RANGES, F.S., DC	10V & 100V
MAX. LOAD CURRENT:	
0 to 10V (either range)	3A
10 to 25V	1-¾A
25 to 50V	¾A
50 to 100V	¼A
ACCURACY, INCLUDING: TIME: Over 10,000 hours TEMPERATURE: +15 to +45°C LINE REG.: 105 to 125 VAC LOAD REG.: Zero to full	±0.01% of setting

DIALABLE REFERENCE/CALIBRATION SOURCES

- 12 models of dialable DC voltage/current reference/calibration sources
- 5 models that also provide built-in constant current operation
- Highly stable and accurate performance
- Resolutions to 0.1µV
- Accuracies to ±0.0015% of voltage setting
- Voltage outputs to ±100VDC
- Current outputs to ±1A
- "Zero" voltage output impedance
- NEW: a portable source/calibrator & multimeter

DIAL-A-SOURCE™ SERIES



Intended for use in the field, on the production floor, and in the lab, a few applications of the Dial-A-Source Series include: A/D & D/A converter evaluation, instrument calibration, transducer simulation, and stability testing.

PROGRAMABLE REFERENCE/CALIBRATION SOURCES

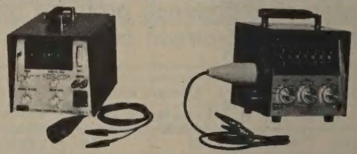
- Resolutions to 0.1µV
- Ranges: 0 to ±1VDC, 10VDC & 100VDC
- Optional constant current operation
- Accuracies to ±0.0025% of setting
- Stabilities to ±7ppm/24 hrs; ±20 ppm/yr

The newest members of the Dial-A-Source family feature remote programing of voltage output, range, polarity, and current limit. Programing instructions can be overridden by switching to the local mode and operating manually.

ELECTRONIC THERMOCOUPLE SIMULATORS

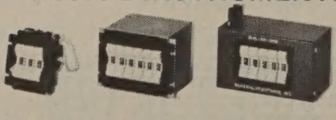
These versatile instruments are not dedicated to a particular temperature range or thermocouple type, so they permit simulation of the five most widely used thermocouple materials (others optional). Since the output is dialed in voltage, rather than in temperature, the ETS/TSC can cope with **any** reference table, **any** thermocouple materials, and **any** temperature. The accuracy of the simulated temperature is ±¼°C, with the exception of platinum.

Because these instruments have "zero" output impedance, the system element (readout, scanner, temperature controller, etc.) undergoing test/analysis/calibration will respond only to the simulated temperature signal provided by the ETS or TSC, without the necessity of disturbing circuit connections. The environment of the system's thermocouple has no effect on the system while the ETS/TSC is connected.



- Truly portable; battery or line operated models
- Models with built-in null detector and "run-up" pot
- Wide range will simulate the output of **any** thermocouple at **any** temperature
- Accuracy: ±¼°C (except platinum)
- Automatic Ice Point References also available

PASSIVE INSTRUMENTS



General Resistance offers a wide selection of:

- **Universal resistance decades:** 39 basic models; accuracies to ±0.01%
- **Kelvin-Varley volt/ratio dividers:** 3, 4, 5, 6 or 7 decades; accuracies to ±½ppm
- **RTD/platinum sensor simulators:** accuracy to ±0.01%, 10Ω to 1kΩ; resolution 1mV

A/S DANBRIDGE INSTRUMENTS

Danbridge has specialized in the development and manufacture of component test equipment since 1949. The Danbridge instrument line complements that of General Resistance and includes **Capacitance Deviation Bridges (1MHz), DC Resistance Bridges, Component Comparators, Capacitance Loss Meters, Decade Capacitors,** and **High-Voltage Insulation Testers.** General Resistance is the sole distributor of A/S Danbridge instruments in the U.S.A. and Canada.

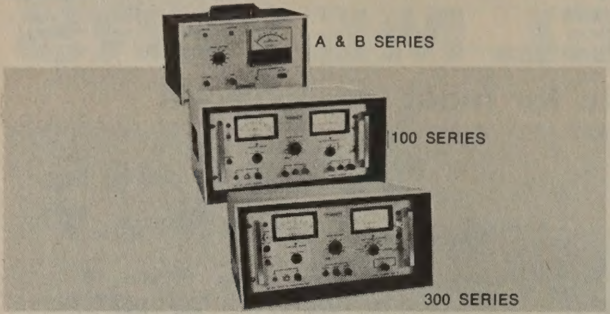
Non-destructive units for production or laboratory use. . . . In ranges up to 10 kV AC and to 25 kV DC.



AC/DC Hipot Testers & Megohmmeters (300 Series)

Six versatile models are designed in A and B versions to meet the requirements of AC Hipot Testing, DC Hipot Testing and Resistance Measurement. The range capability for current and resistance reading varies according to the model number and selected version.

Every unit contains an overload circuit with continuously adjustable sensitivity from 50 μA to 5 mA allowing non-destructive testing of insulation and dielectrics.

Features

- Dual range output connected kV meter with calibrated set point for megohmmeter readings clearly marked
- Reset button and failure indicator
- Recalibration facilities
- Guard circuit for grounded and ungrounded operation
- Front panel re-entrant test lead connections
- AC/DC function indicator lights
- Zero start interlock compels operator to start tests at zero volts
- Gravity operated shorting solenoid with discharge resistor
- Audible failure signal

Specifications

Input: 115 V AC, 60 Hz, 1 Amp max. **Size & Weight:** 21″Wx19″Dx10″H; approx. 50 lbs. **Meters:** 2% full scale accuracy, 4½″ meter. **Current Meter Ranges: A Series** — Ranges of 0-50/500/5000 μA, dc, 0-5 mA AC, 1 to 1000 megohms in 2 ranges. **B Series** — Ranges of 0-0.5/5/50/500/5000 μA, 0-5 mA AC, 1 to 100,000 megohms in 4 ranges.

Model	Output Voltage (kV)		Current Meter Range		Megohm Ranges
	AC	DC	AC	DC	
H301A	1.0	1.5	0-5 mA	0-50/500/5000 μA	2
H301B	1.0	1.5	0-5 mA	0-0.5/5/50/500/5000 μA	4
H303A	2.5	3.0	0-5 mA	0-50/500/5000 μA	2
H303B	2.5	3.0	0-5 mA	0-0.5/5/50/500/5000 μA	4
H306A	5.0	6.0	0-5 mA	0-50/500/5000 μA	2
H306B	5.0	6.0	0-5 mA	0-0.5/5/50/500/5000 μA	4

AC/DC Hipot Testers (100 Series)

The H100 Series consists of eight models subdivided into four subseries — H103, H106, H115, H125 — based on output voltage range. Each subseries is available in two versions, standard (H) or deluxe (HD) based on the number of ranges provided for current readings.

All units are constructed with a standard 19″ panel and enclosed in an attractive bench top cabinet. A ground lead and a shielded test lead is included with each unit.

Features

- Overload circuit with continuously adjustable overload sensitivity from 50 μA to 5 mA permitting safe, non-destructive testing
- kV meter recalibration facility
- Output control continuously adjustable from zero to max.
- Front panel re-entrant test lead connections
- AC/DC function indicator lights
- Gravity operated output shorting solenoid with discharge resistor
- Audible failure signal

Specifications

Input: 115 V AC, 60 Hz, 5 Amps max. **Size & Weight:** 21″Wx19″Dx10″H; approx. 60 lbs. **Meter:** 2% full scale accuracy. 4½″ meter.

Model	Output Voltage (kV)		Output Current Meter		kV Meter Ranges
	AC	DC	DC	AC	
H103	2.5	3.0	0-5 mA	0-5 mA	0-3 kV
HD103	2.5	3.0	0-50/500/5000 μA	0-5 mA	0-0.6/1.2/3 kV
H106	5.0	6.0	0-5 mA	0.5 mA	0-6 kV
HD106	5.0	6.0	0-50/500/5000 μA	0-5 mA	0-1.2/3/6 kV
H115	12.0	15.0	0-5 mA	0-5 mA	0-15 kV
HD115	12.0	15.0	0-50/500/5000 μA	0-5 mA	0-3.75/7.5/15 kV
H125	10.0	25.0	0-5 mA	0-5 mA	0-25 kV
HD125	10.0	25.0	0-50/500/5000 μA	0-5 mA	0-5/10/25 kV

AC & DC Production Hipot Testers (A & B Series)

The A and B Series of Hipot Testers is designed for simple and reliable production line testing. Each model has continuously variable output voltage and an output connected kV meter providing optimum test accuracy. Non-destructive testing is ensured with a sensitive leakage and arc detection system.

Features

- An AC power on switch, an internal fuse and pilot light
- A continuously adjustable output voltage control
- Corona network arc detector and indicator
- A shielded output lead with an alligator clip termination
- Adjustable overload system

AC Models	Output Voltage	kV Meter
HDA3	3 kV AC	0-3
HDA5	5 kV AC	0-5
HDA10	10 kV AC	0-10

DC Models	Output Voltage	kV Meter
HDB4	4 kV DC	0-4
HDB6	6 kV DC	0-6
HDB12	12 kV DC	0-12

Specifications

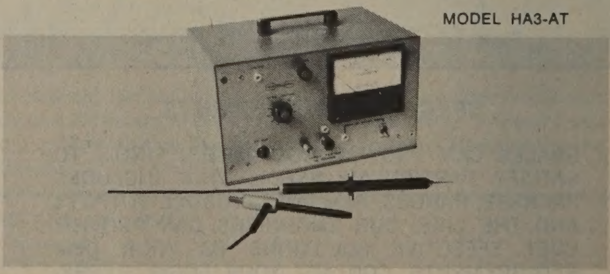
Input: 115 V AC, 60 Hz, 3 Amps max. **Size & Weight:** 7″Hx12″Wx8″D; approx. 20 lbs. **Meter:** 3% full scale accuracy, 4″ meter.

AT Series of UL Testers

Reliable and simple to operate, the AT Series is designed for continuous assembly line testing of electrical appliances and instruments to meet UL standards of dielectric withstand. Visible and audible indicators of component leakage or internal arcing provide safe, non-destructive testing. Direct and accurate output voltage readings will result, independent of the load.

Features

- AC outputs: 1200 volts A1 Series, 0-3,000 volts HA3 Series
- Overload circuit with manual reset and overload pilot light
- Voltmeter connected at output for maximum accuracy (except the model A1-AT which has a 500 VA transformer)
- Visible and audible failure indicators
- Input switch, pilot light and high voltage fuse
- Front panel lead connections



MODEL HA3-AT

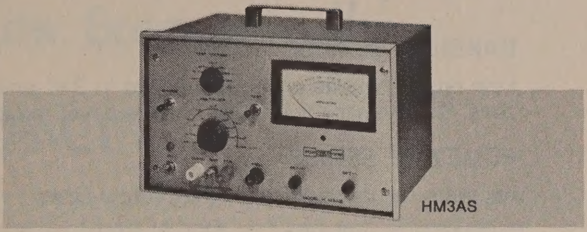
Prices and specifications subject to change without notice.

Megohmmeters/ Insulation Testers

The HM Series consists of six high voltage megohmmeters for precision measurement of resistance in a variety of components and insulations.

The output voltage is double-regulated with a ferro-resonant line and solid state electronic regulators eliminating the need for meter averaging even in the larger capacitive loads.

A complete short circuit protection system permits continuous shorting without injury to the operator or the component.



HM3AS

Features

- A meter multiplier with multiple positions for range selection
- Ferro-resonant line and solid state electronically regulated test voltage
- Dual color meter scale
- Four terminal output network for grounded or ungrounded testing
- Self-contained precision calibrating resistors

Specifications

Input: .... 115 volts, 60 Hz.
Weight: .... 20 lbs. (approx.)

AC/DC Kilovoltmeters

Our AC/DC kilovoltmeters offer laboratory precision combined with rugged design and packaging for field use. Separate dividers for AC and DC are enclosed in one oil filled phenolic cylinder for safe storage.

All models are triple range and have a shorting position for transport. Every unit is calibrated with our standard traceable to the National Bureau of Standards which has better than 0.1% accuracy on DC and better than 0.5% accuracy on AC. Surge devices prevent injury to the operator and the component even when short circuits occur at full voltage.

Liquid Dielectric Testers

The portable OC Series of liquid dielectric testers is designed to test the breakdown voltage of insulating liquids in accordance with ASTM and various international specifications. The fully automatic models, OC-50A, OC-60A and OC-90A feature automatic rate of rise with manual dwell at any voltage. The fourth model, OC-51M has manually operated variable output with a range of 0-50 kV.

The memory meter, included on all the units, provides accuracy and repeatability of readings, allowing truly comparative readings of different dielectrics and periodic comparative readings of the same dielectric. A variety of test cells (oil cups) are available for use with the units.

Test Cells

BAKELITE SERIES

Low profile bakelite and glass meters in 3½" and 4½" sizes. Smooth satin finish case - modern, yet rugged.

EDGEWISE SERIES

Excellent readability with a long narrow scale.

PROJECTED FRONT SERIES

The newest in meter design. Projected front allows window type mounting. Completely shadow free illumination due to translucent case back.

CUSTOM SERIES

Our ever-popular custom series rectangular meter is made in sizes from 1½" to 8". All have long sweeping scale and 100° movements.

BEZEL MOUNT SERIES

rugged die cast metal bezels are available for the custom meter sizes 1½", 2½", 3½" and 4½".

METER MOVEMENTS

one of the most complete selections of meter movements in the industry:

- Self-shielded
- External Magnet
- A.C. Repulsion
- A.C. Rectified.

For detailed description of panel meters and their movements, please request literature from the Burton-Rogers Company, 556 Trapelo Road, Belmont, Mass. 02179.

Now—Valid testing of up to 20,000 complex wired circuits a minute. Economically.

That's a FACT.®

Our newest FACT (Flexible Automatic Circuit Tester) system, called FACT®-PC, is controlled by a programmable digital processor and specially designed modular software for performing all wiring-analysis functions.

Very high testing rates of complex wiring, computer backplanes, and multilayer PCs are achieved: 10K-20K continuity tests/minute and 4K-10K leakage (at up to 1500 VDC) tests/minute—more than double those previously possible.

FACT-PC complements existing FACT-II systems. Programming, output connectors and fixturing are common between the FACT-PC and FACT-II.

And these FACT interconnection devices help optimize system productivity:

FACT-AID (Automatic Interconnection Device) permits rapid electrical hookup of multilayer boards and backplanes under fully automatic control.

FACT-LIFT (Low Insertion Force Technique) achieves multipin electrical contact to hook up thousands of backplane contacts positively in seconds.

FACT-QUIC (Quick Universal Interface Connector) is for rapid interconnection to FACT switching modules.

FACT SPRING PROBE ADAPTERS are fixtures that feature Quick Interchangeable Test Heads with contact densities of up to 400 probes/sq. in.

The FACT systems and associated interconnection devices offer you the most efficient, economical solution to exacting, large-volume wiring analysis. Two brochures, "FACT-PC" and "The FACT System," explain in detail. Ask for them at Industrial Products Division, FACT Systems, Hughes Aircraft Company, PO Box 92904, Los Angeles, CA 90009; (213) 670-9040.

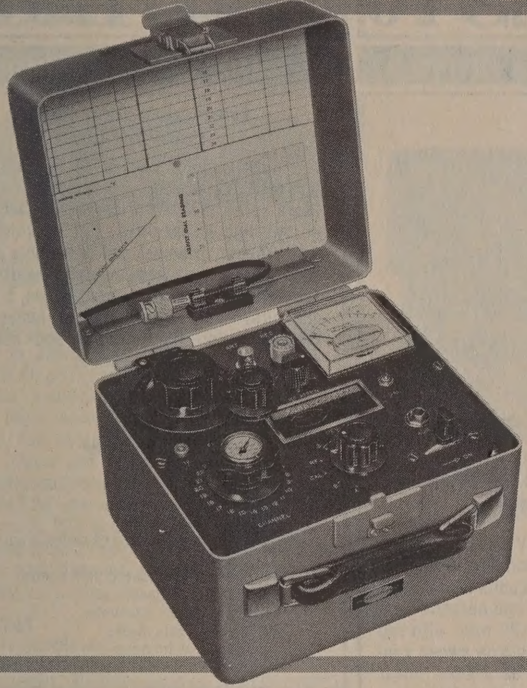
ICM

Frequency Meter

FM-2400CH (25 to 1000 MHz)



The FM-2400CH provides an accurate standard frequency signal for testing and adjustment of mobile transmitters and receivers at predetermined frequencies between 25 and 1000 MHz. Up to 24 crystals may be inserted. The frequencies can be those of the radio frequency channels of operation, and/or of the intermediate frequencies of the receivers between 5 MHz and 40 MHz. Frequency stability (standard) ±.001% from +32° to +122°F. Frequency stability with built-in thermometer, calibrated crystals and temperature corrected charts, ±.00025% form +25° to +125°F. (±.000125% special 450 MHz crystals available). Unit has solid state circuitry and rechargeable batteries.

SPECIFICATIONS

Crystal Oscillator

Frequency Range — 5 to 20 MHz
Frequency Stability — Standard —
±0.0005% from +50° to +104°F
±0.001% from +32° to +122°F
with built-in thermometer —
±0.00025% from +25°F to +125°F
with crystals calibrated and supplied with temperature corrected charts.
±.000125% +55° to +95°F
Frequency Tuning — 0.005%

Transmitter Pickup

Frequency Range — 25 to 500 MHz/1000 MHz
Sensitivity — 100,000 μV at 25 MHz to 250,000 μV at 470 MHz across 50 ohms

Counter Circuit

Frequency Ranges — 0 to 1.5 KHz
0 to 15 KHz
Residual Error — 100 cps at zero beat

RF Signal Generator

Frequency Range — 25 to 500 MHz/1000 MHz
Low Output* — 80 dbm to –100 dbm
High Output — Approximately 500 μV across 50 ohms

Crystal and tuning specifications are the same as for the Crystal Oscillator above.

External Accessories

#246 IF Oscillator, 190 KHz to 8 MHz
Cat. No. 035321 .... $35.00
#241 Audio Oscillator, 1,000 HZ
Cat. No. 035322 .... $35.00

I.F. Signal Generator

Frequency Range — 5 MHz to 20 MHz on Fundamentals, and to 40 MHz on 2nd harmonics
Frequency Stability — ±0.002% from +32° to +122°F
Frequency Tuning — None
Output — 1,000 μV minimum into an open circuit
4 Nickel-Cadmium rechargeable batteries, charger supplied

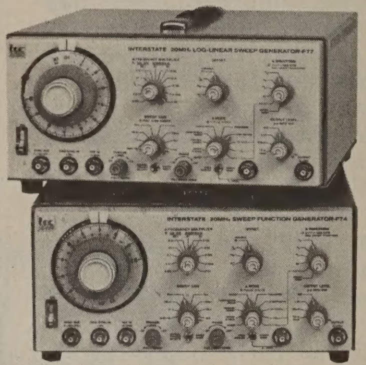
SERIES 70

Function Generators



Broad Range With Plenty of Power

SERIES 70, a universal signal-source line, offers the ultimate blend of function, pulse, and sweep generator capabilities. Four SERIES 70 models to choose from, all producing sine, square, triangle and dc-level waveforms with 5/95% waveform variable symmetry control, fixed and variable offset, and calibrated coarse/fine frequency tuning. Model F72 combines the capabilities of "true pulse" and function generators into one versatile unit. Models F74 and F77 add sweep capabilities to the "true pulse" and function generator combination. Top-of-the-line F77 also offers selectable log/lin sweep, sweep sync, and analog power amplifier capabilities.

F71 $745
- 0.00002 Hz to 20 MHz range
- 15 V p-p into 50 ohms
- constant duty cycle pulses
- 1000:1 VCF
- waveform inversion
- high/low output, 30-dB separation

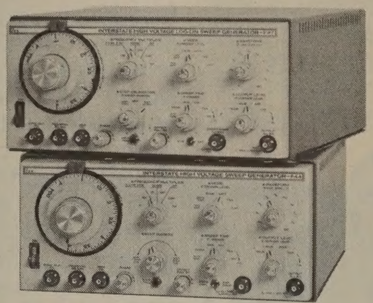
F72 $945
- adjustable rise/fall pulses to 15 ns
- 3 ns to 1000 ms adjustable pulse width
- trigger & gate with variable start-stop phase
- external synchronization
- plus all other F71 features

F74 $995
- fixed rise/fall pulses — 15 ns
- 3 ns to 10 ms adjustable pulse width
- 60-db step attenuator with vernier
- continuous & triggered sweep, sweep-and-hold & burst modes
- sweep up/sweep down
- direct-reading sweep limit control
- sweep ramp/frequency analog outputs
- trigger & gate with variable start-stop phase
- external synchronization
- plus all other F71 features

F77 $1165
- selectable logarithmic/linear sweep characteristics
- sweep synchronization
- analog power amplifier
- plus all other F74 features

SERIES 40

Function Generators



High Performance in the Medium Price Range!

This new high voltage (40 V p-p output) line offers five models, some including frequency marker and calibrator. These units also feature bipolar and unipolar positive and negative variable width pulses down to 120 nsec with rep rates to 4 MHz. F44 features true sweep generator characteristics such as 1000:1 linear sweep capabilities, sweep ramp output, continuous and triggered sweep and direct-reading sweep limit. F47 combines the features of the F44 with 10,000:1 logarithmic sweep and 11-point step frequency calibration between main dial settings. F46 gives the user AM/FM function generator capabilities with sinewave to 8 MHz, internal 400 Hz modulation and a 40-dB dynamic range.

F41 $475
- continuously variable vernier
- 0.0004 Hz to 4 MHz range
- 20 V p-p into 50 ohms
- analog of frequency out
- 1000:1 VCF (FM)
- 11-point calibrator
- variable offset
- sine, square, triangle, dc waveforms & variable width pulse

F43 $525
- external synchronization
- trigger & gate modes with variable start-stop phase
- variable symmetry
- plus all other F41 features

F44 $595
- sweep ramp output
- frequency marker
- direct-reading sweep limit
- continuous & triggered sweep
- plus all other F41 features except calibrator

F46 $695
- sinewave to 8 MHz
- internal 400 Hz modulation
- AM 40-dB dynamic range
- plus all other F41 features except calibrator

F47 $675
- selection of linear or logarithmic sweep characteristics
- 11-point calibrator
- plus all other F44 features

SERIES 30

Function Generators

Interstate's Best Selling Economy Line!

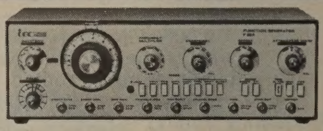
The most popular models in the SERIES 30 line are F31 and F34 — thousands of satisfied users agree that the price/performance value of this line is excellent. F31 provides clean sine, square, triangle, and adjustable dc. F34 adds trigger and gate, variable width pulse and sweep waveforms — continuous, triggered and burst — plus Interstate's exclusive direct-reading sweep limit control and calibrated coarse/fine frequency vernier.

F31 $435
- 0.03 Hz to 3 MHz
- 10 V p-p into 50 ohms
- 2-step, 40-dB attenuator
- 1000:1 VCF
- ±5V offset into 50 ohms

F34 $645
- continuous & triggered sweep & burst modes
- direct-reading sweep limit control
- analog of frequency out
- 5-step, 60-dB attenuator
- trigger & gate modes
- variable width pulse
- plus all other F31 features

F55A

Function Generator



The Sophisticated Generator with Phase-Lock and Phase-Shift at $1645

Phase-lock output is phase-coherent and adjustable in phase through 360° with respect to a reference signal. F55A's special phase-lock capability permits input signal to be frequency-multiplied or divided, as well as changed to any other form. Comprehensive pulse and waveform generation, multiple operating modes, and a host of superior performance features enable this precision instrument to fulfill critical instrumentation parameters for exacting laboratory situations.

- 0.00001 Hz to 11 MHz range
- 3 mV to 15 V p-p into 50 ohms
- sine, square, triangle, ramps
- fixed & variable offset
- 1000:1 VCF
- fixed & variable width pulses & ramps
- pulse width modulation
- trigger & gate modes
- continuous & triggered sweep, sweep-and-hold modes
- burst — single or multiple cycles
- direct-reading sweep limit control
- variable start-stop phase
- waveform inversion
- phase-lock

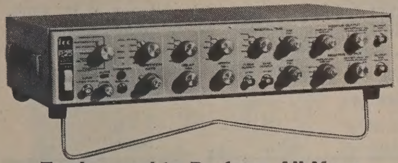
SIGNAL SOURCES

SERIES 20

Pulse Generators



Engineered to Perform All Your Pulse Requirements

Constant duty cycle mode and pulse amplifier mode, in addition to standard pulses, make SERIES 20 pulse generators tremendously versatile instruments, outstanding for their price. Pulse width delay from 10 nsec to 1 second, full range offset, normal and double pulse, trigger and gate modes with slope and level adjustments are standard on all models. P22 and P24 offer selectable positive or negative output. P24 and P25 have variable rise/fall times from 5 nsec to 0.5 sec. P23 and P25 feature simultaneous positive and negative outputs.

P22 $745
- 1 Hz to 50 MHz range
- 10 V p-p output into 50 ohms
- single output, selectable positive or negative pulses
- fixed rise/fall times less than 3.5 ns

P23 $845
- dual outputs, simultaneous positive & negative pulses
- fixed rise/fall times less than 3.5 ns for each output
- plus all other P22 specifications & features

P24 $995
- single output, selectable positive or negative pulses
- adjustable rise/fall times from 5 ns to 0.5 sec
- independent rise & fall controls
- plus all other P22 specifications & features

P25 $1185
- dual outputs, simultaneous positive & negative pulses
- adjustable rise/fall times from 5 ns to 0.5 sec for each output
- independent rise & fall controls
- plus all other P22 specifications & features

P12

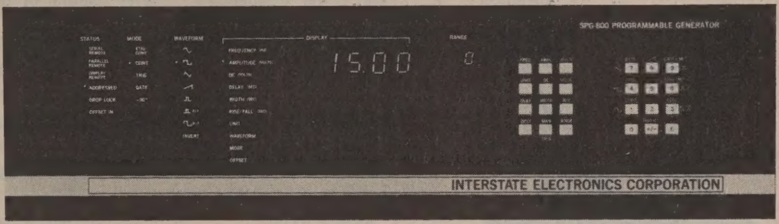
Pulse Generator

Don't Overlook the Economical P12 at $445

- 0.01 Hz to 10 MHz range
- 10 V p-p into 50 ohms
- single or double pulses at rep rates from 0.01 Hz to 10 MHz
- squarewaves to 5 MHz
- pulse width and delay variable from 50 nsec to 1 sec
- simultaneous positive and negative outputs
- normal/complement output selection
- 5-nsec rise/fall times for each output
- adjustable amplitude from 1 V to 10 V into 50 ohm load
- external or manual triggering
- synchronous or asynchronous gating

SPG-800

Programmable Generator



SPG-800 PROGRAMMABLE GENERATOR
DISPLAY
RANGE
15.00
INTERSTATE ELECTRONICS CORPORATION

Interstate's New Synthesized Programmable Generator combines all these instruments in one:

- **Programmable Synthesizer**
- **Programmable Pulse Generator**
- **Programmable Function Generator**
- **Programmable Voltage Source**

This exciting new product from INTERSTATE gives Automatic Test Equipment system designers a truly universal signal source. SPG-800 not only has all the top performance specifications of each of these programmable instruments individually, but several unique extra capabilities from the synergistic effect of their interaction.

Plug-in Construction
- up to 4 instruments in one box
- lowest cost combination of signal sources
- ASCII, IEEE 488, RS-232-C and 20 ma interfaces

Capabilities For All Instruments
- 0.1 Hz to 13 MHz frequency range
- 10 mV to 15 V p-p amplitude

Programmable Function Generator
- sine, square, triangle, ramp, pulse and more
- continuous, trigger, gate, AM and FM modes and more

Programmable Synthesizer
- frequency accuracy to 0.0001%
- tracking signal output (31-43 MHz)
- 1 MHz crystal reference output
- 1 MHz external precision reference input

Programmable Pulse Generator
- true pulse generator with variable rise/fall to less than 20 ns
- width and delay from 40 ns
- single or double pulse modes
- unipolar or bipolar pulses

Programmable Voltage Source

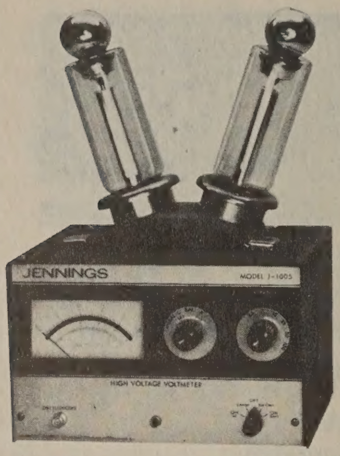
high voltage test and measuring equipment

SOLID STATE AC VOLTMETER



MODEL J-1005

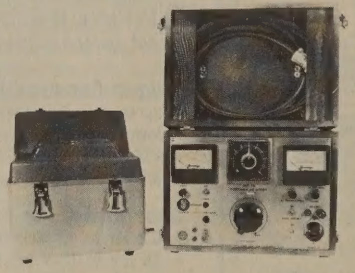
A compact, portable instrument for the accurate, direct reading of very high voltages at rf, audio and power frequencies . . . determination of the amplitude of pulses with oscilloscope connections for viewing wave shapes . . . removable high voltage input circuit for remote panel mounting of the meter . . . internal battery and ac line operation.

Specifications	Model J-1005
Voltage Ranges	Peak Kilovolts (single-ended) 0-2.5, 0-5, 0-10, 0-25, 0-50 Peak Kilovolts (double-ended) 0-2.5, 0-5, 0-10, 0-25, 0-50, 0-100
Frequency Response	Flat from 10 Hz to 20 MHz at full rated voltage. Internal resonances are above 100 MHz.
Accuracy	±3% of full scale on all voltage ranges.
Oscilloscope Connection	600 to 1 division ratio (approx.).
Meter Calibration	The meter is calibrated in peak kilovolts with linear voltage scales of 0-2.5, 0-5, 0-10, 0-25, 0-50.
Input Impedance	Greater than 2 x 10^{12} ohms and approx. 4 pf single-ended to ground, 2 pf double-ended.
Power Supply	117/230 volts ±10%, 50/60 Hz, 5 watts, or rechargeable battery.
Dimensions	Height, 16″; width, 10¾″; depth, 8″.
Net Weight	12 pounds (approx.). Ranges can be increased by using JCD5 series capacitors.

PORTABLE AC HIGH VOLTAGE TESTER

MODEL JHP-70A

The smallest and lightest instrument available at its power level the JHP70A will generate and measure 70,000 volts peak for on-site testing of high voltage components such as capacitors, switches, transformers, bushings, vacuum tubes, etc.



Maximum Output Voltage	**70 KV Peak**
Maximum Continuous Current	**30 MA RMS**
Short Circuit Current (Est.)	**100 MA RMS**
Power Requirements	**105-125 Volts RMS**
Frequency	**50-60 Hz**
Current	**15 Amps**
Surge Current	**10 Amps**
Weight:	
Control Cabinet	**28 lbs.**
Transformer	**43 lbs.**

DIGITAL AC/DC KILOVOLTMETER,

MODEL 12100

Versatility:
Reads average DC, peak AC or true RMS AC.

Accuracy:
DC calibration better than 1% of reading ±0.1% of full scale ±1 digit (LSD).

Wide Range:
0-10, 0-50 kilovolts DC; DC and 8 Hz — 100 KHz.

Bipolar:
Automatically displays correct DC polarity.

Hi Input Impedance
- Portability
- Oscilloscope Jack

Specifications	Model 12100
Voltage Ranges	DC: 0-10 KV, 0-50 KV AC (RMS): 0-10 KV, 0-35 KV ACpk (+): 0-10 KV, 0-50 KV ACpk (−): 0-10 KV, 0-50 KV
Frequency Ranges	8 Hz to 100 KHz on AC peak measurements, 8 Hz to 20 KHz on AC RMS measurements.
Accuracy	DC & AC pk: 1% of reading ±0.1% of full scale ±1 digit (LSD), AC (RMS) ±2% of full scale.
Digital Display	3½ digit high intensity plasma.
Input Impedance	10^{10} ohms and 10 picofarads.
Oscilloscope Connection	BNC connector, output 1 volt for full scale reading.
Power Supply	117 or 230 volts ±10%, 50/60 Hz, 5 watts or rechargeable battery, 8 hours recharge.
Dimensions	6″ x 14″ x 11″
Net Weight	12 lbs. (approx.)

high voltage test and measuring equipment

DIGITAL DC HIGH POTENTIAL TESTERS

DIGITAL HIGH POTENTIAL TESTER
MODEL 16420
JENNINGS

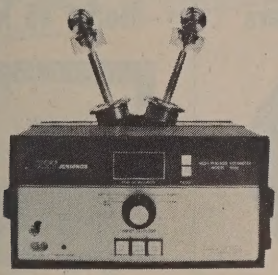
Model 16420

Compact portable instruments for measuring high voltage leakage currents in the insulation of electrical equipment including: rotating machinery, transformers, switchgear, relays, interrupters, contactors, capacitors, cables and insulators. The high voltage power supply is electronically regulated against line and load changes. Circuitry is all solid state and features an adjustable current limiter (30 to 300 microamperes) for protection of the tester and non-destructive testing of components. Model 16400's functions are separately accessible, permitting its use as a portable laboratory high voltage power supply or as a digital kilovoltmeter. AC line operation.

Specifications	MODEL 16420
Max. Output Voltage	40 KV DC
Max. Output Current	300 μamps
Ripple	3% of rated output
Load Regulation	3%
Input Regulation	1%
Displays	Two 3-digit high intensity plasma "kilovolts" and "microamps"
Voltmeter and Microammeter Accuracy	0.5% of full scale, 1 bit LSD
Power Requirements	117/230 volts ±10% 50/60 Hz, 30 watts

DIGITAL AC KILOVOLTMETER

MODEL 11100



Direct Reading: For on-line applications.

Accuracy: Calibration better than 1.0% of full scale.

Wide Range: 0-10, 0-100 kilovolts; 10 Hz - 30 MHz.

Portability: Operates from internal battery or line. Weighs less than twelve pounds.

Oscilloscope Jack • Remote Display • Stability

Specifications	Model 11100
Voltage Ranges	Peak kilovolts (single-ended) 0-10, 0-50 Peak kilovolts (double-ended) 0-10, 0-100
Frequency Range	Flat from 10 Hz to 30 MHz at full rated voltage. Internal resonances are above 100 MHz.
Accuracy	±1% of full scale on both ranges.
Digital Display	3½ digit high intensity plasma.
Input Impedance	2 x 10^{12} ohms and 4 pf single ended to ground, 2 pf double ended.
Oscilloscope Connection	BNC connector, 600-1 division ratio approximate.
Power Supply	117 or 230 volts ±10%, 50/60 Hz, 5 watts or rechargeable battery, 8 hours recharge.
Dimensions	9″ x 16″ x 15″
Net Weight	12 lbs. (approx.)

HIGH VOLTAGE AC DIVIDER

MODEL 13200

These dividers can be used with an oscilloscope to measure and observe voltages up to 50 kv at frequencies up to 20 MHz. Their low circuit loading design and shielded construction make them particularly suitable for rf measurement applications including tank circuit and transmission line voltages, pulse parameters, modulation voltages, and transient wave characteristics.

Specifications	Model 13200
Voltage	50 kv peak
Current	12.5 amperes RMS maximum through the voltage divider.
Input Impedance	Above 10^{12} ohms, 4 pfd.
High Frequency Response	Flat to 20 MHz at 50 kv peak; maximum frequency 50 MHz at 20 kv peak.
Division Ratio	325:1 to termination of 3 ft. of RG-58A/U cable.
Low Frequency Response When operated into shunt resistance of 1 megohm 10 megohms	 1000 Hz 100 Hz
Weight	2 lbs. 4 oz.

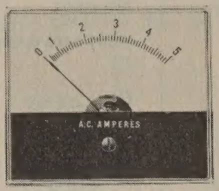
PANEL METERS AVIONIC PRODUCTS

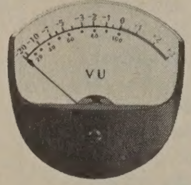
KATY INDUSTRIES, INC. SUBSIDIARY

Series MS Series



Three sizes available, 1½″ (Model MS1), 2½″ (Model MS2), 3½″ (Model MS3) . . . painted cover section can be color styled . . . the modern meter for the modern look.

VU Meters



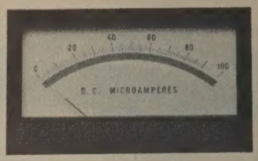
Used for monitoring volume levels in broadcast, recording and communication applications . . . meter is essentially a rectifier-type AC voltmeter of high sensitivity . . . built in some of the conventional meter case designs.

Series 70 Meters

D.C. MILLIAMPERES

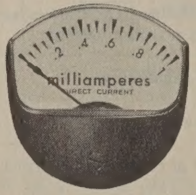
Available in 5 sizes, 1½″ (Model 71), 2½″ (Model 72), 3½″ (Model 73), 4½″ (Model 75) and 6″ (Model 76). All meters front panel mounted . . . behind the panel mounting with black bezel on 2½, 3½ and 4½″ models. Available with taut band, pivot and jewel and iron vane movements.

Model 65 Meters



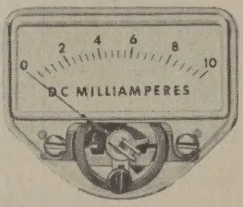
A rectangular styled meter with zero adjustment screw located on front face . . . dial is mounted flush with panel . . . Available with pivot and jewel and taut band.

Series MM Meters



Medallion styled panel meters available in three sizes (1½, 2½ and 3½″). Painted portion of cover can be color styled. Available with taut band, pivot and jewel and iron vane movement.

Series 80 Meters



Series 80 Taut Band meters affords functional design that provides maximum visibility in minimum space. Available in three sizes (1½, 2½ and 3½″).

Series HS Meters

MILLIAMPERES

These meters are noted for their resistance to shock and vibration . . . mechanisms are mounted on rubber at three points . . . special pivots, hair-springs and fastening techniques reduce effects of hard usage. 1½, 2½ and 3½″ models.

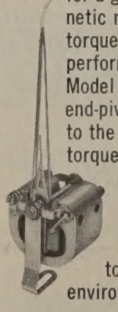
Model 45 Meters

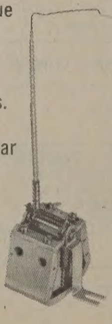
D.C. MICROAMPERES

Modern industrial styling on a 4½″ meter with bakelite cover and glass window. Available with taut band, pivot and jewel and iron vane movements.

AVIONIC PRODUCTS

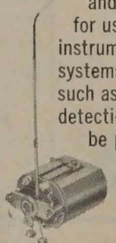
Mechanisms 201/208

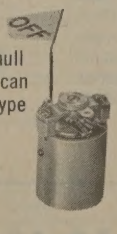




The Model 201 was designed to develop the highest possible torque for a given volume of magnetic material. Its high torque provides unusual performance characteristics. Model 208 is an externally end-pivoted mechanism similar to the Model 201. This high torque mechanism easily operates extremely long and heavy pointers. The Model 208 was developed to satisfy severe environmental requirements.

Mechanisms 202/215





The Model 202 and the Model 215 are center pivoted coaxial flag mechanisms. Lightweight, compact size, and durability make them ideal for use in multi-element aircraft instruments and control systems for functions such as alarm indication and null detection. These mechanisms can be provided with various type flags and pointers.

Mini Indicators

The Model 240 Mini Indicator features a compact moving-coil mechanism which is available in a range of easy to read pointer configurations. This versatile mechanism is also utilized in the Model 241 flag indicators. These compact units provide a confusion-proof display of on-off information such as alarm, position, or malfunction.

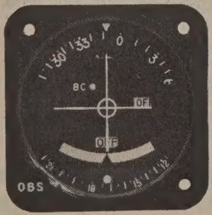
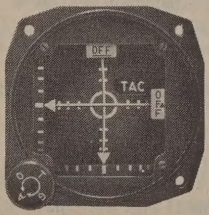
AVIONIC PRODUCTS

308, 309 Indicators



A course Indicator illustrates the degree of deviation from a selected flight path. The basic course indicator contains a Localizer Pointer, a To-From-Off flag and servo course selector. The 309 ILS Indicator is a modified 308 to contain a Glide Slope pointer and associated power failure flag which indicates aircraft deviation from the glide slope path.

Hover Indicator



The Hover Indicator was designed to provide doppler or cable drift information to the helicopter pilot. This instrument is a flight director and is capable of being operated in four models: (1) Automatic Flight Control System (A.F.C.S.), (2) Ground Velocity Reference (G.V.R.), (3) Tactical Air Navigation Beacon Systems (TAC/TACAN), (4) Visual Omni Range (On-On/VOR).

328, 329 Indicators

BC
RN
OFF
OFF
OBS

These course Indicators are highly sophisticated versions of the 308 and 309 models utilizing resolvers, synchros and control transformers which yield greater accuracy required in the more advanced navigation systems such as Area Navigation (R/NAV).

ATTENUATORS

STANDARD IN-LINE ATTENUATORS MODELS 430B, 431C, 432D, 441B, 442D, 452C, 1/432D, 1/442D

Kay Elemetrics' standard line of in-line toggle switch attenuators has been designed to provide a highly accurate fixed amount of loss in circuits operating in the DC to 1 GHz region. This series includes three basic models; the 431C, the 432D, and the 1/432D which provide 0-41 dB, 0-101 dB, and 0-22.1 dB, respectively.

HIGH ACCURACY, LOW LOSS

Attenuation levels are controlled by field-proven, high-frequency toggle switches, constructed of precious metal contacts set in teflon for low loss and superior match. Precision, 1% film resistors are used throughout. The individual pi pads are housed in zinc alloy castings which utilize broad-tuned shielded compartments to provide high accuracy and a flat frequency response over the specified range. All models are bidirectional and are available in 50, 75, or 90 ohm characteristic impedance. They have met rigid environmental tests and are traceable to N.B.S.

0-41 dB in 1 dB STEPS

Standard in-line models 431C, 441B — 50, 75, respectively — provide 0-41 dB of attenuation in six precise steps of 20, 10, 5, 3, 2, and 1 dB.

10-51 dB in 1 dB STEPS

Model 430B is similar to the above series but include a fixed and accurate 10 dB of insertion loss, in addition to the 20, 10, 5, 3, 2, and 1 dB switched attenuation steps.

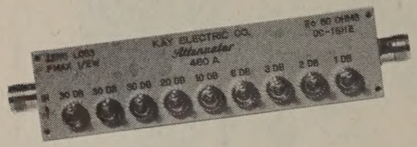
0-101 dB in 1 dB STEPS

In-line attenuator models 432D, 442D, and 452C are extended versions of the 431C series above, providing an addiitonal three 20 dB switch positions over the same 1 GHz frequency range. Specifications for these models are given on page 2881.

0-22.1 dB in 0.1 dB STEPS

The 1/432D, and 1/442D attenuators are nine step models which provide a fine decimal-step control of attenuation in steps of .1, .2, .3, .5, 1, 2, 3, 5, and 10 dB.

MINIATURE IN-LINE ATTENUATORS MODELS 437A, 447A, 438A, 439A, 449A, 1/439A, 1/449A



Kay's new line of miniature rotary attenuators has recently been designed to fill test decimal-step model in addition to the popular six and nine step models. These units have been carefully engineered to supply up to 132 dB of attenuation in highly accurate steps in a package that is small enough to meet small (1¼" x 6") panel space requirements, and light enough (8 oz) to be supported by a standard cable connector.

0-41 dB in 1 dB STEPS

Miniature in-line models 438A — 50 ohms — provide 0-41 dB of attenuation in six ministeps of 20, 10, 5, 3, 2, and 1 dB.

0-101 dB in 1 dB STEPS
0-132 dB in 1 dB STEPS

Models 439A and 449A, extended the attenuation range of the 438A series by providing three additional 20 dB positions. Maintaining the same high accuracy and low insertion loss, models 460A and 470A are available as nine position miniature models with 0-132 dB of attenuation in 1 dB steps.

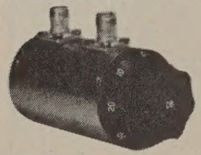
0-22.1 dB in 0.1 dB STEPS

Up to 22.1 dB in 0.1 dB increments is provided by models 1/439A (50 ohm), and 1/449A (75 ohm). These attenuators feature a high degree of accuracy over their vernier ranges when used separately or connected in series with Kay 1 dB step attenuators.

0-102.5 dB in 0.5 dB STEPS

An extension of the 1/439 series, the 437A and 447A provide a high degree of attenuation along with a fine 0.5 dB vernier.

STANDARD ROTARY ATTENUATORS MODELS 435A, 436B, 445A, 446B, 490A, 1/435A, 1/445A



Kay's standard line of rotary attenuators now cover an extended frequency range from DC-2000 MHz. These new improved versions are available in 10 dB steps to 70 dB, 1 dB steps to 10 dB and 0.1 dB steps to 1 dB. 50 or 75 ohms characteristic impedance can be provided.

MECHANICALLY SOUND

All models are mounted in rugged, lightweight, iridited aluminum housings, designed to facilitate panel mounting. A standard ball-detent mechanism is used in all models. All units may be mounted by a standard switch thread.

0-70 dB in 10 dB STEPS

0-70 dB in 10 dB steps is provided by models 436B and 446B — 50 and 75 respectively. Attenuation levels are engraved in white on a handsome black anodized knob at increments of 10, 20, 30, 40, 50, 60, and 70 dB.

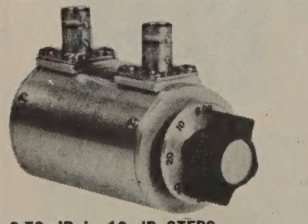
0-10 dB in 1 dB STEPS

Models 435A, and 445A provide from zero to 10 dB of attenuation in steps of 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10 dB. This series of rotary attenuators takes up only 2" (diameter) x 2⅛" (depth) of panel area.

0-1 dB in 0.1 dB STEPS

Rotary attenuators 1/435A and 1/445A are decimal step versions of the 435A series. They provide a fine vernier control of attenuation over the DC-1 GHz region when used separate units or combined with the 435A and 436B series attenuators.

MINIATURE ROTARY ATTENUATORS MODELS 500A, 510A, 520A, 530A, 1/500A, 1/510A



Kay's new line of miniature rotary attenuators has recently been designed to fill test equipment and aerospace packaging requirements for small lightweight, high-frequency units with high-accuracy, high-attenuation values. This new series provides the same general specifications and characteristics as the standard rotary series featuring lower VSWR's. The entire unit utilizes only 2½" of panel depth and weighs in at less than 2.5 oz.

0-70 dB in 10 dB STEPS

0-70 dB in 10 dB steps is provided by models 520A and 530A — 50 and 75 ohms. Attenuation values are indicated at 10 dB increments on a black anodized knob.

0-10 dB in 1 dB STEPS

Models 500A and 510A provide up to ten dB of switched attenuation in precise 1 dB steps. 50 and 75 ohms characteristic impedances are available.

0-1 dB in 0.1 dB STEPS

A fine decimal step control of attenuation is provided by models 1/500A (50 ohms), and 1/510A (75 ohms).

ATTENUATORS

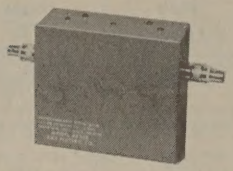
PROGRAMMABLE ATTENUATOR / DC — 1.3 GHz

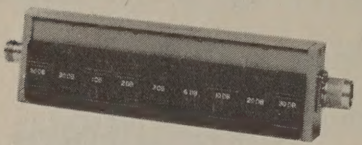


For automatic testing, new programmable, precision attenuator controlled by logic level inputs and powered by the 50/60 Hz AC line (or optional 400 Hz) are offered in cool-running, compact, low-cost units. This nine line model offers 0-135 dB in one dB steps over a DC to 1300 MHz range.

MODEL 4430A

Frequency Range	Attenuation Range	Typical Overall Accuracy	Maximum VSWR	Insertion Loss	Switching Speed	On Levels — Off Levels (with 4490A Logic Adapter)	Logic Input Z (4490A)	Power
DC-1.3 GHz	0-135 dB in one dB steps	±1 dB to .5 GHz ±1.5 dB to 1 GHz	1.2:1 to .5 GHz 1.4:1 to 1 GHz	.2 dB to .5 GHz .5 dB to 1 GHz	20 ms/Line	0-5 V DC or Short 0-1 V DC or Open	1000 Ohms	1 Watt

SLIDING BLOCK ATTENUATORS / DC — 6 GHz



A new coaxial in-line attenuator has recently been introduced by Kay to span the DC — 6 GHz range. Developed from Kay's precision VHF-UHF attenuators the new Model 461B provides any combination of 1 dB stepped increments over a wide 132 dB attenuation range. This feature also allows insertion of the often used 3 dB or 6 dB level points by a single switch throw, eliminating the mechanics of inserting individual pads or the need to go thru a time consuming rotary step cycle.

MODEL 461B
Frequency Range: DC to 4 GHz.
Attenuation Steps: 9 steps.
(dB): 1, 2, 3, 6, 10, 20, 30, 30, 30.

Controls: Slide switches.
Dimensions:
8⅜″ x 2⅜″ x 1⅞″, plus connectors.
Weight: 2.5 lbs.

MODEL 424B
Frequency Range: DC — 6 GHz.
Attenuation Range: 0 - 90 dB in 10 dB steps.
Attenuation Steps: 10, 20, 30, 30 dB.

2000 AND 2100 ATTENUATORS — PROGRAMMABLE AND REMOTE OPERATION

ATTENUATOR 2000
KAY
MANUAL
AUTO

The new Kay 2000 and 2100 attenuators are suitable for remote operation, having no moving parts and thus have unlimited life. These continuously variable, solid-state attenuators can be used for accurate control of attenuation over a wide range and the voltages can be preset to obtain any desired exact value of attenuation.

Models 2000 and 2100 can be used as RF switch with high turnoff ratio or as control elements in a leveler to produce flat output for signal sources. These units are very suitable for automated test systems.

SPECIFICATIONS

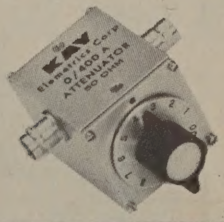
Voltage controlled solid-state attenuators — may be used as AM Modulator (to 30 kHz) or RF Switch.

Frequency Range: 2 to 500 MHz.
Attenuation Range: 0 to above 76 dB.
Insertion Loss: 6 dB max.
VSWR: 1.5:1 max. 1.2:1 typical.
Input level (into 50 or 75 ohms): Max. 2.0 VRMS 10-500 MHz. Max. 0.5 VRMS 2-10 MHz.
Flatness: Over 70 dB Attenuation Range: ±1.5 dB 2-500 MHz, ±0.5 dB 5-200 MHz.

Model 2000 75 ohms
Control Voltage: 0-10 volts DC-30 kHz (3 dB).
Supply Voltage: +10 V, 140 mA. (max).

Model 2100 50 ohms
Control Voltage: 0-12 volts DC-30 kHz (3 dB).
Supply Voltage: +12 V, 200 mA. (max).

CONTINUOUSLY VARIABLE ATTENUATORS



Kay Elemetrics, long the leader in the precision stepped attenuator field, introduces a new series of continuously variable attenuators. The 50 ohm Model 0/400A and 75 ohm Model 0/410A are highly accurate, compact units designed with user requirements and foremost in mind.

Model	Attenuation Range	Frequency Range	Control	Accuracy	Flatness	Insertion Loss	Maximum VSWR	Impedance	Dimensions	Price
0/400	12 dB	DC-500 MHz	Rotary, Continuously Variable	±0.3 dB	±0.2 dB	1 dB	1.3:1	50 ohms	1½″x2″x2 9/16″	$120
0/410	12 dB	DC-400 MHz		±0.3 dB	±0.2 dB	2 dB	1.35:1	75 ohms	1½″x2″x2 9/16″	$120

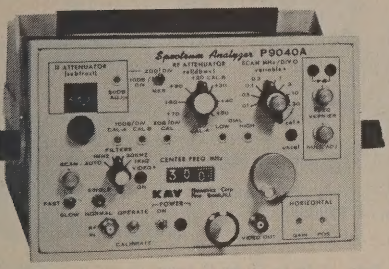
SPECTRUM ANALYZER

9040-300 MHz SPECTRUM ANALYZER



- **72 dB DYNAMIC RANGE**
- **PHASE LOCKED**
- **1 kHz RESOLUTION**
- **PLUG-IN FORMAT**
- **9014 POWER SUPPLY $190**

The 9040 spectrum analyzer is available both self contained in the 9014 power supply with X and Y outputs for independent use with any oscilloscope, or as a plug in for the 5103 Tektronix oscilloscope.

The 9040 features phase locked operation with 1 kHz resolution in the 1-300 MHz frequency range. The 72 dB dynamic range with sensitivity to -50 dBmv 75 ohm, -100 dBm 50 ohm is displayed in either 10 dB/div or 2 dB/div. Scan width is variable from 3 kHz per division to 30 MHz per division with excellent linearity. Scan speed is variable from 40 sec. per scan to 60 Hz in addition to a one shot sweep for use with XY plotters.

I.F. filters at 1 kHz, 30 kHz, 300 kHz and 1 MHz are manually selected or automatically selected in the Auto Mode to reduce scan loss error. The unit also features built in frequency markers for calibration of both amplitude and frequency with cal adjustments readily accessible on front panel. A precision 0-70 dB rotary attenuator provides attenuation in 10 dB steps with 1% accuracy. Spurious responses are greater than 72 dB down.

DESCRIPTION

Frequency Tuning Range: The P9040 operates over the 500 kHz to 300 MHz frequency range.

Display Flatness: The P9040's amplitude flatness is held to within ±1 dB over any selected frequency span across the unit's 300 MHz range.

Center Frequency Accuracy: The unit's dial accuracy is better than ±1% of the full frequency range at any point.

Frequency Scan, Calibrated: The P9040 provides eight calibrated scan ranges covering 30 MHz/Div. to 0.01 MHz/Div. and a continuously variable vernier.

Dynamic Range: 72 dB at a bandwidth of 1 kHz; 68 dB at a bandwidth of 30 kHz; 62 dB at a bandwidth of 1 MHz.

Sensitivity: The CW signal input sensitivity is −52 dBmv at a 1 kHz bandwidth (−102 dBm at 50 ohms).

Scan Modes and Rates: The P9040 provides variable scan rate control:
Fast — 2.5 msec/Div. to 50 msec/Div.
Slow — 25 msec/Div. to .5 sec/Div.
Single Shot — Spring loaded switch for manual actuation.
Linelock

IF Filters: Automatic (for the elimination of scan loss) and manual filter actuation are provided: At 1 MHz and 300 kHz, both with a shape factor of 5:1. At 30 kHz with a shape factor of 2:1, and at 1 kHz with a shape factor of 10:1 (All specified at the 3 dB point).

Resolution Bandwidth: P9040 resolution is provided in variable bandwidth ranges from 30 MHz per division to 3 kHz per division.

Frequency Resolution: Signal resolution is within 1 kHz.

Vertical Display Accuracy: This P9040 characteristic is within ±0.2 dB per dB, maximum, of 2 dB, over the entire range.

RF Attenuation: A precision, decade attenuator controls the RF input level. Its accuracy over the 500 kHz to 300 MHz range is ±1%.

FREQUENCY CALIBRATOR ACCURACY: A 30 MHz, ±0.005% display harmonic (comb) marker is included as an accurate calibration reference standard.

Amplitude Calibrator Accuracy: The 30 MHz frequency standard is also referenced for an accurate 20 dBmv amplitude calibrator (−30 dBm ±0.5 dB at 50 ohms).

Intermodulation Distortion: At any point across the 500 kHz to 300 MHz frequency range IMD is more than 72 dB down, with any two signals equal to or below the reference level.

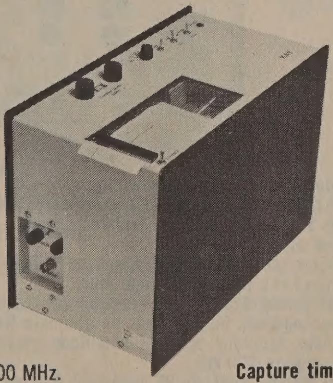
Spurious Signals (Internally Generated): Greater than 72 dB down or below the dynamic range of the unit.

Phase Lock: Active in the 0.03 and 0.01 MHz/Div. scan ranges, this P9040 feature aids narrow dispersion testing.

OSCILLOSCOPE: Wide range GAIN AND POSITION front panel adjustments are provided for P9040 interface with the display system.

Impedance: The P9040 is available in either 50 or 75 ohms. The unit is calibrated in dBmv in the 50 ohm version and in dBmv in the 75 ohm.

9021 NEW 8 BIT x 256 WORD DIGITAL CAPTURE AND CHART RECORDER FOR CATV SWEEP TESTING



Built in Timer (0.25, 0.5, 1 and 2 hour time intervals) for unattended CATV measurements over several days.

Portable unit with very easy to read hard copy.

Can be operated on self-contained battery or external source.

SPECIFICATIONS

Frequency Range: 5 to 400 MHz.

Minimum sweep signal input for full scale deflection: +15 dBmv.

Minimum signal input to trigger unit: −20 dBmv.

Synch frequency: 50 MHz.

Capture time: 2.56 milliseconds ±.1%

Vertical resolution: 8 bits.

Horizontal resolution: 256 words.

Memory size: 2000 bit digital, MOS.

Power: Self-contained rechargeable batteries or from DC supply input voltage 10-16 volts.

Source DC supply current: 350 mA standby — 2.5 Amp recording.

Size: 6″ x 8″ x 10½″, 15 cm x 20 cm x 51 cm.

Weight: 10 lbs., 4.5 kilograms.

Chart size: Width 2″, 50 mm.

Attenuator range: 0-29 dB.

Input VSWR: 1.2:1.

SWEEP GENERATORS

9063 1 MHz to 1500 MHz SWEEP

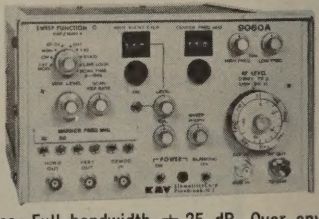
Frequency Range: 1 MHz to 1500 MHz in 2 bands. Band #1: 1 MHz to 900 MHz. Band #2: 800 MHz to 1500 MHz.
Dial Accuracy: Band #1: ±15 MHz. Band #2: ±10 MHz.
Sweep Width: Band #1: 100 kHz to 1000 MHz. Band #2: 100 kHz to 700 MHz.
RF Output: .5 v rms (+54 dBmv 75Ω)
(+ 7 dBm 50Ω)
Flatness: Band #1: UHF ±0.25 dB Band #2: ±0.3 dB over all: ±.5 dB
VHF ±0.25 dB
Attenuation: 80 dB total; 70 dB rotary attenuator in 10 dB steps. Accuracy: ±(1% of attenuation +.1 dB) and 10 dB of variable attenuation.
Harmonic Signals: Band #1 & Band #2: Greater than 30 dB down relative to the fundamental output.
Spurious Signals: greater than 30 dB down on band #1. Band #2 is a fundamental frequency output and there are no spurious signals.
Sweep Linearity: 1% of straight line.
Residual FM: Band #1 — 15 kHz rms. Band #2 — 15 kHz rms.
Drift: 750 kHz long term.
Sweep Modes:
(A) Recurring sweep, internally triggered from 1 Hz to 100 Hz continuously variable.
(B) Linelock
(C) Manual sweep.
Sweep Voltage: Sawtooth ±5 V P-P min.
Ext Trig: +1 volt pulse, with 2 ms rise time will trigger the 9063's sweep circuits. (optional @ $150.00).
Summation Sweep: 2 to 5 ms scan time continuously variable. (optional @ $150.00).
Variable Scan Rep. Rate: .1 Hz to 50 Hz (1 scan/10 sec to 1 scan/20 ms).
CW Range: 1 MHz to 1500 MHz in two bands.
Ext FM Position: Unit can be modulated at rates from dc to 5 kHz. Required input voltage ±8 V.
Markers: Up to 6 single frequency and/or harmonic comb markers, individually switched.
Accuracy ±.01% from 0°C to 50°C
±.005% @ 25°C.
Ext AM: DC to 10 kHz 75% AM @ 5 kHz
50% AM @ 10 kHz

9062 1 MHz to 1000 MHz SWEEP

Frequency Range: 1 MHz to 1000 MHz in 1 band.
Dial Accuracy: ±10 MHz.
Sweep Width: 100 kHz to 1000 MHz.
RF Output: .5 V rms (+54 dBmv 75Ω)
(+ 7 dBm 50Ω)
Flatness: UHF ±0.25 dB
VHF ±0.25 dB
over all: ±.5 dB
Attenuation: 80 dB total; 70 dB rotary attenuator in 10 dB steps. Accuracy: ±(1% of attenuation +.1 dB) and 10 dB of variable attenuation.
Harmonic Signals: Greater than 30 dB down relative to the fundamental output.
Spurious Signals: Greater than 30 dB down.
Sweep Linearity: 1% of straight line.
Residual FM: 15 kHz rms.
Drift: 750 kHz long term.
Sweep Modes:
(A) Recurring sweep, internally triggered from 1 Hz to 100 Hz continuously variable.
(B) Linelock
(C) Manual sweep.
Sweep Voltage: Sawtooth ±5 V P-P min.
Ext Trig: +1 volt pulse, with 2 ms rise time will trigger the 9062's sweep circuits. (optional @ $150.00).
Summation Sweep: 2 to 5 ms scan time continuously variable. (optional @ $150.00).
Variable Scan Rep. Rate: 1 Hz to 50 Hz (1 scan/10 sec to 1 scan/20 ms).
CW Range: 1 MHz to 1000MHz.
Ext FM Position: Unit can be modulated at rates from dc to 5 kHz. Required input voltage ±8 V.
Markers: Up to 5 single frequency and/or harmonic comb markers, individually switched.
Accuracy ±.01% from 0°C to 50°C
±.005% @ 25°C.
Ext AM: DC to 10 kHz 75% AM @ 5 kHz
50% AM @ 10 kHz.
Power: 30 watts, 115 VAC 50/60 Hz 220 VAC (Available).

9060 500 kHz to 500 MHz SWEEP

Frequency Range: Continuously variable 500 kHz to 500 MHz (Utilizing manual sweep control 500 kHz to 600 MHz).
Frequency Dial Calibration: Digital readout at 200 kHz intervals, dial accuracy ±5 MHz.
Ext FM: ±8 V will frequency modulate unit ±300 MHz
(A) Maximum rate for full frequency output is 5 kHz
(B) ±10 V at 100 kHz rate will sweep unit over 100 MHz band.
Sweep Width: 80 kHz to 600 MHz continuously variable.
Output Amplitude: (1 Vrms to 32 μV)
+13 dBm to −77 dBm 50 ohm output impedance
+60 dBmv to −30 dBmv 75 ohm output impedance.
Output Attenuation: 90 dB, 70 dB in 10 dB steps, 20 dB of variable control
Accuracy of step attenuator: ±(1% of attenuation +.1 dB).
Residual FM: 3 kHz rms.
Display Linearity: 1% of straight line frequency.
Sweep Modes:
(A) Recurring sweep, internally triggered from .01 Hz to 100 Hz in 4 overlapping ranges
(B) Linelock
(C) Externally triggered sweep
(D) Summation sweep.
Sweep Voltage: Sawtooth ±5 V P-P min.
Ext Trig: ±1 volt pulse, with 2 ms rise time will trigger the 9060's sweep circuits.
Summation Sweep: 2 to 5 ms scan time continuously variable.
Ext AM: DC to 10 kHz: 75% @ 5 kHz
50% @ 10 kHz.



RF Output Flatness: Full bandwidth ±.25 dB. Over any 10% segment ±.15 dB (Up to +.05 dB using external ALC sampler).
Spurious Signals: Harmonically related signals −35 dB, non-harmonically related signals −35 dB.
Drift: Short term 100 kHz/5 min from 0°C to 50°C provided unit has stabilized at a particular temperature.
Markers: Birdie bypass markers with provisions for up to six plug-in marker modules. Markers may be at single frequencies or at harmonic intervals. Accuracy ±.01%, amplitude greater than 2 V P-P, marker width approx. 200 kHz.
External Marker Input: An RF connector is provided for the injection of a CW signal to provide for an external birdie marker.
Marker Identifier: A variable pulse marker which is continuously variable over the 500 MHz center frequency range and which can be used as a pulse marker or as a counter of the harmonic birdie markers. This marker appears at the same output as the birdie markers.
Amplitude: +3 V
Accuracy: ±1% over full band.
Power: 30 watts, 115 VAC 50/60 Hz 220 VAC (Available).

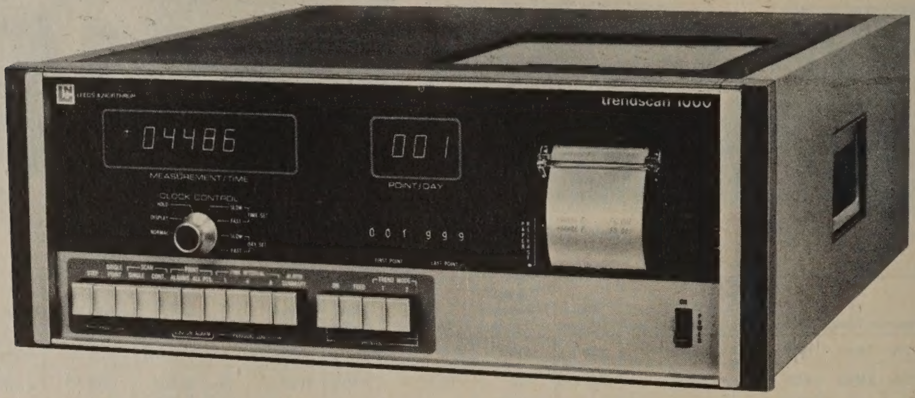
Leeds & Northrup's Trendscan 1000 Data Acquisition System



...lets you speed read your data with logging, trending and alarming up to 1000 points

Features

- **Scanning, alarming, logging up to 1000 points.**
- **3+ or 4+ digit measurements . . . Single or Multi-range.**
- **Linear and non-linear inputs . . . TC, RTD, V, mV, mA and contact closure.**
- **Easy programming . . . range selection, point skip, alarm commutation.**
- **Integral printer . . . ribbonless, non-impact, 21 alphanumeric columns.**
- **Unique Trend Mode . . . prints bar graphs (Trendbars) for trending or profiling.**
- **Full alphanumeric printing of legends, status and static data.**
- **Built-in clock.**
- **Six internal digit alarms . . . or 128 with external Trendscan Alarm Processor.**
- **Remote location of input switching assemblies . . . up to 3200 feet (1000 meters).**
- **Low thermal input switching relays . . . convenient isothermal input connectors.**
- **Self-test of each range . . . independent of inputs.**
- **Flexible input/output peripheral interface.**

The Trendscan 1000 Data Acquisition System provides a highly flexible means of scanning, alarming, trending and/or logging up to 1000 inputs—thermocouples, RTDs, transmitters, EMF signals, current signals and/or contact closures. Single ranges or multi-ranges (3) are available with 3+ or 4+ digit resolution. Multi-range units may include any combination of linear or non-linear signals including TC, RTD, mV, V, mA or contact closure.

A complete 20 point system can be provided in a single compact (7″ × 19″ × 22½″) chassis for bench use or rack mount. This includes two 10 point input switching relay cards with isothermal connectors (5 inputs per card for RTD)—basic point selection and scanning controls with point display—signal conditioning, A/D conversion, linearization and measurement display—an integral printer for data logging and a clock which provides system or real time with controls to initiate a periodic data log at intervals up to 8 hours.

INPUT SWITCHING When more than 20 inputs are needed, input switching relays and input connectors are supplied in Model 2701 Trendscan Input Frames which accommodate up to 10 input cards (100 inputs) per frame. Up to 10 frames can be supplied for 1000 inputs. These frames may be located up to 3200 feet (1000 meters) away from the Trendscan 1000 for convenient and economical installation near the input elements.

Point selection signals are supplied to each of the 2701 Input Frames through a 42 conductor matrix cable from the Trendscan 1000 where the point selection and scanning controls are located. A set of input signal leads for each range are connected between the 2701 Input Frame(s) and the 2700 Trendscan. No power connections are required for the Input Frames.

ALARMS Up to 6 bipolar digital alarms and a per point alarm programming feature are available. The Trendscan 1000 can be specified with 1, 2 or 3 internally mounted alarm modules, each with two independent alarms. A module has two sets of digital switches to set a 4 digit limit corresponding to the 4 most significant digits of the measurement. Each alarm limit has a separate sense switch for HI or LO limit, and a polarity select switch. One reset switch is provided on each module common to both alarms. Each alarm has an LED indicator and a SPDT output relay connected to screw terminals at the rear of the Trendscan.

When more than 6 alarms are required, the 2783 Trendscan Alarm Processor is available in place of the internal alarms for up to 128 different dual level alarms.

PROGRAMMING Following a very simple sequence, any one of up to 250 input points may be addressed and assigned to any one of three available ranges (except RTD ranges which are assigned in groups of 5 inputs). Any point may be skipped or assigned to any one, none or all of the 6 internal alarms. Points programmed for point skip do not cause a loss of time during the scan cycle.

Systems with more than 250 input points are programmed in a similar manner except that range, point skip and alarm assignments are made in groups of 5 points rather than on a per-point basis. All programming is stored in solid state memory (RAM) with a continuously charged battery back-up for 1000 hour program retention without line power.

LEEDS & NORTHRUP

North Wales, Pa. 19454
Attn: MD 337-K
(215) 643-2000

PRINTOUT Trendscan 1000 systems offer unique capabilities for data presentation. An integral ribbonless printer prints out point identification, optional 4 character static data, status reports on inputs (e.g. OPEN or OVLD) and alarms (e.g. HIGH or LOW), four or five digit presentation of measured variable with polarity and legend plus an independent line stating time of printout, all arranged in an orderly format. In addition, an exclusive Trend Mode feature is available which graphically presents the least significant digits in the measurement as a bar graph (Trendbar) preceded by a numeric printout of the most significant digit(s). Three modes of increasing resolution are available for the Trendbar graph in which 1, 2 or 3 of the most significant features are suppressed and printed out, and the next two digits are presented in the Trendbar format.

The three modes of digital suppression allow successively higher resolution with the Trendbar for critical analysis in analog form. Best resolution is achieved in Mode 3 which can be as high as 1 part in 40,000 on a 4+ digit instrument or 1 part in 4,000 on a 3+ digit instrument, depending on the total range selected.

Printout of any single point, group of points or all points, may be initiated either manually, in response to an alarm, or on a preset time interval in any one of the formats desired. In addition, detection of alarms can initiate a printout. A summary of printout of all points in alarm can be manually initiated.

INPUT/OUTPUT INTERFACE OPTIONS Where data records other than the integral printer are needed, interface options are available for: Paper tape punch, 7 Track Magnetic Tape, 9 Track Magnetic Tape, Teletype Writers, Line Printers, CRTs, Programmable Calculators, and RS-232-C/TTY interface for full bidirectional control.

Where the measurement data presented on the integral printer is the only record desired, a limit interface to other equipment can be provided. This option permits remote signals to control start of scan and scan-rate. Ouput from the Trendscan 1000 interface to external equipment is TTL compatible, serial by character, and includes measurement data with the following point status information: high or low alarm, open input or overload, last point indication, scan point and next scan point advance indication. Provision is also made for 4 digits of static data entry from external BCD switches.

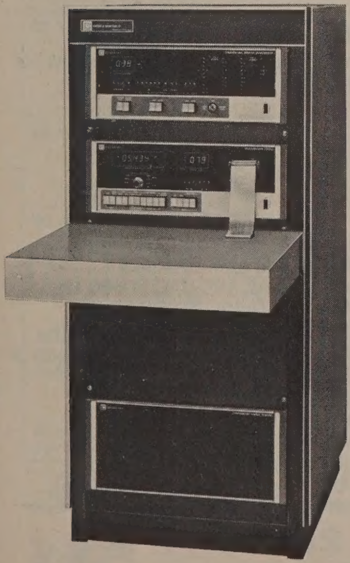
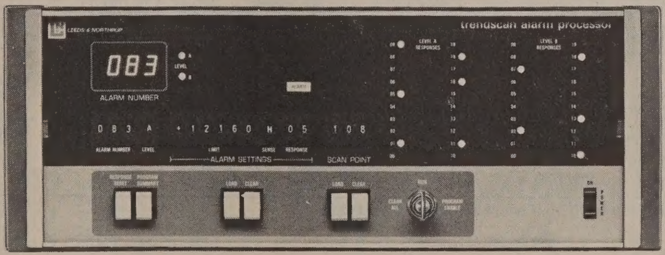
EXPANDED TRENDSCAN SYSTEMS





The Trendscan 1000 can be combined with a Trendscan Alarm Processor to create a Data Acquisition System with extensive and flexible alarm capability. The Trendscan Alarm Processor is conveniently packaged in a 7″ × 19″ rack chassis and can be mounted with the Trendscan 1000 and related Input Frames in a variety of cabinets to provide a compact totally integrated system with broad data measurement and surveillance capacity.

The Trendscan Alarm Processor provides 64 or 128 programmable single or dual level alarms. Any one or more of the inputs from the Trendscan 1000 can be assigned at random to any one of these alarms.

Responses to alarms can take the form of illuminated LED indicators on the front panel, relay contact closures (made through screw type terminals on the rear of the chassis), and a serial BCD output.

Input and alarm assignments are programmed through an array of programming switches on the front panel into a solid state memory in the Alarm Processor—a memory which has a 1000 hour program retention time in the event of power loss. A locking switch with a removable key prevents tampering after the alarms have been programmed.

AC Ranges: @ 60 Hz, ±.01% Rdg. ±0.1% FS
From 50 to 1000 Hz, 0.1% Rdg. ±0.2% FS

Accuracy (Model 4443):
DC Ranges: 0.05% Rdg. ±0.2% FS.
AC Ranges: @ 60 Hz, ±.01% Rdg. ±0.2% FS
From 50 to 1000 Hz, 0.1% Rdg. ±0.4% FS

Input Isolation from Power Line: 500 volts peak.

Operating Temperature: +5°C to +55°C.

Storage Temperature: −20°C to +85°C.

Display Blanking: Requires two TTL loads.

Programmable Decimal Points: Available at rear terminals as an option.

Polarity:
Positive Logic "1" +2.4V minimum @ −40 μA.
Negative Logic "0" +0.4V maximum @ +1.6 mA.

Reading Rate: 3.3 reading/second. Special reading rates optional.

Power: Standard, 120 VAC 50/60 Hz. Strappable, 240 VAC 50/60 Hz.

Digit Serial Multiplexed BCD Outputs: (Standard) will drive 1 TTL load or 9 LTTL loads.

Input Bias Current:
4.0 pA typical.
1.0 nA maximum, basic ranges.

Power Dissipation: 4 watts typical.

Warm Up Time: Less than 5 minutes.

NEW DIGITAL CONTROL METERS

DIGITAL MEASUREMENTS FOR

AC VOLTAGE	**PRESSURE**
DC VOLTAGE	**PROCESS CONTROL**
AC CURRENT	**RPM**
DC CURRENT	**TEMPERATURE**

Digital Control Meters control and display temperature, voltage, or current in brilliant high intensity display. If either setpoint is exceeded a LED indicator lights and a relay switches for precise quick-control.

Setpoint adjustment is also fast, and easy: simply depress and rotate the control knob to obtain the desired high or low limit. Digital Control Meter displays the setpoint value during setting, reverts to displaying the controlled variable as soon as the knob is released.

For details on Digital Control option contact your local LFE representative or stocking distributor.

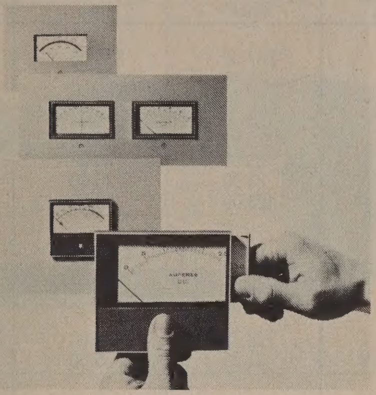
api SERIES 7000 PANEL METERS & PYROMETERS



- Three-way choice of mounting — front mount, bezel mount, lens mount.
- Phenolic fronts and cases — rugged and reliable.
- Glass windows — scratch-proof, free of static electricity.
- Front decorator plates — flat black, two shades of grey, tan, and olive.
- Insertable scales — field changeable, reduces inventory, eliminates damage.
- Taut band mechanism and 1% tracking — standard in the most popular DC ranges.
- Self shielding — for mounting on either magnetic or non-magnetic panels.

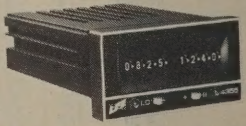
DUAL CONTROL COMPARATOR
MODEL 4355



The LFE Model 4355 Dual Control Comparator adds limit-set, GO/NO/GO, or ON/OFF control capability to any measuring device with TTL-compatible parallel BCD output: digital panel meters, digital voltmeters, up/down counters, scalers, digital temperature indicators, and other process digitizers. Model 4355 is designed to function with LFE Model 4352 digital panel meters.

The Model 4355 makes two simultaneous thumbwheel-input comparisons with one 4-digit (or 3½-digit) input word, triggered by the trailing edge of a logic 1 pulse. Algebraic sign of each setpoint is independently selected with two front-panel switches.

ACCESSORIES

Input and +5 VDC Connector (required for all models)

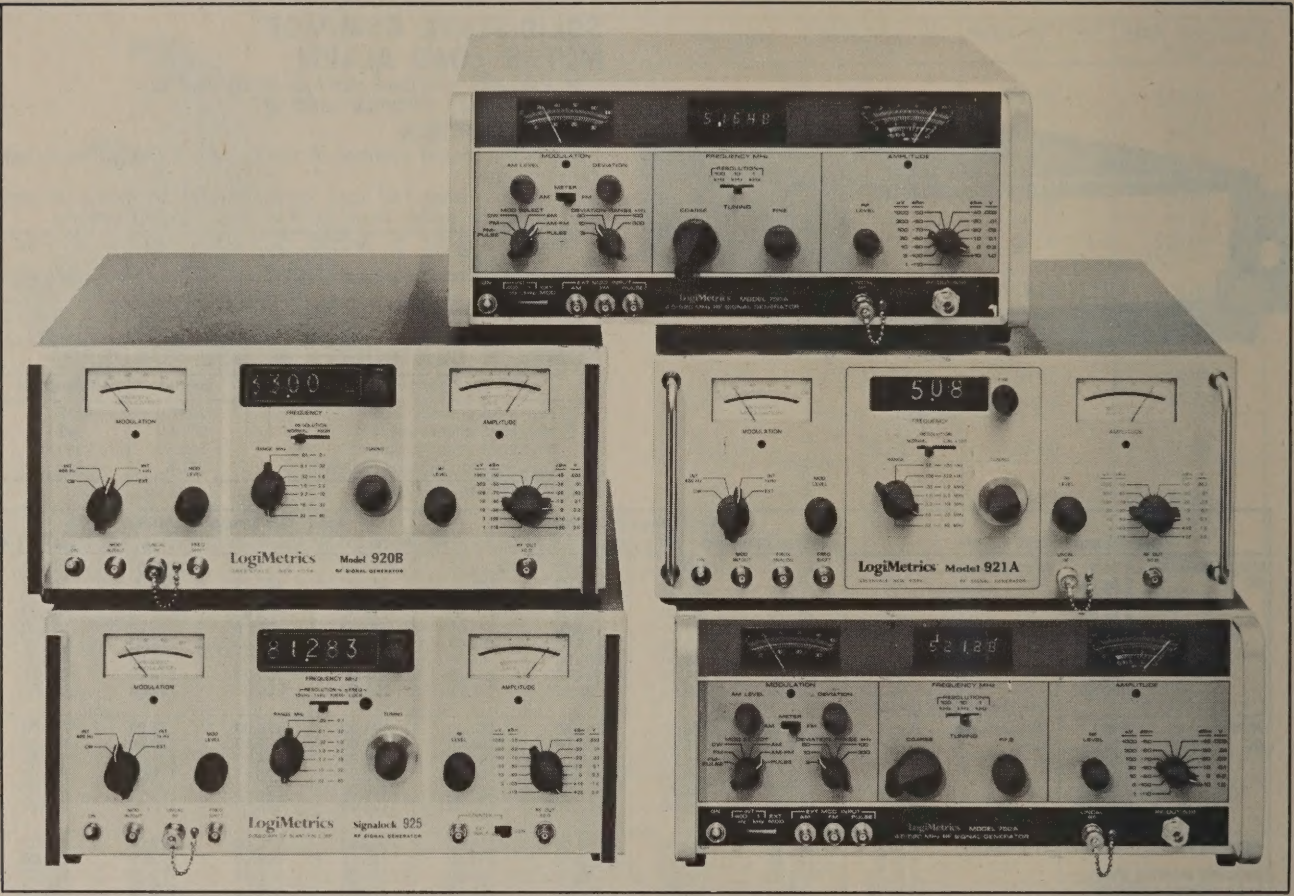
LogiMetrics RF SIGNAL GENERATORS



LogiMetrics provides the industry's most complete line of solid state signal generators, all of which are equipped with digital frequency readout. The signal generators cover the range of 50 kHz to 520 MHz with integral counters and leveled outputs. A precision attenuator allows the power to be varied from +23 dBm (3 V RMS) to –127 dBm (0.1 μV RMS) into 50 ohms.

The generators inherent stability and ease of calibration allow users to perform RF measurements with superior convenience and accuracy and at the best cost effectiveness.

Model 315 combines two models 925 for single sideband test.

Among the many features offered in the line is Signalock®*, the capability to count external signals and full modulation. Solid state design, self calibration and plug-in circuit cards insure ease of maintenance and long equipment life.

LogiMetrics signal generators are available with Federal Stock Nomenclature and under G.S.A. contract.

* LogiMetrics holds the original patents on the digital readout signal generator and Signalock®, the circuit that is the key to stabilized signal generators. These patents are licensed to other major companies.

Model	Frequency Range MHz	Accuracy	Digits Display	Features
925	.05 to 80	±10 Hz	6	AM, Signalock®
920B	.05 to 80	±500 Hz	5	AM, High Accuracy
921A	.05 to 80	0.01%	3 (+ x 100)	AM, Low Cost
750A	4.5 to 520	±0.0001%	5	FM/AM Pulse
950A	1.5 to 80	±500 Hz	5	FM/AM Com. Test
315	.25 to 80	±10 Hz	6	Two Tone S.S.B. Test

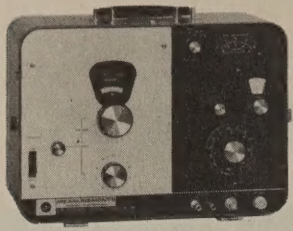
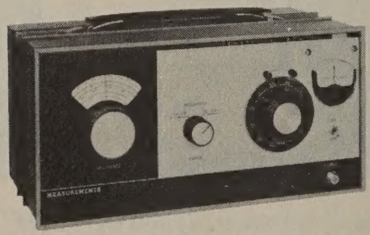
INSTRUMENTS FOR RESEARCH, PRODUCTION AND SERVICE



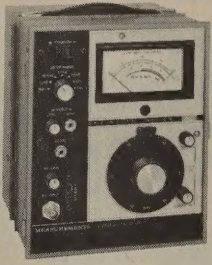
MODEL 1400 SERIES Standard FM Signal Generator

Frequency Accuracy: Individually calibrated dial, direct reading, accuracy ±0.5%. Electronic vernier tuning, with or without modulation; ±20 kHz shift at 470 MHz. Incremental tuning ±16 kHz. • **Output Voltage Scales:** 0.1 to 100,000 microvolts & (-8 to -128dBm) across a 50-ohm termination. Reference level automatically maintained ±10% from 25 to 470 MHz. (Optionally available 880 to 960 MHz harmonic band). • **Output Voltage, IF Oscillator (Model 1418 only)**: Maximum output better than 0.5 volts into a 50-ohm resistive load (crystal position 0.3 volts). A front panel potentiometer gain control provides at least 50 to 1 attenuation. • **Modulation Frequencies:** Internal: 1 kHz oscillator; 20 Hz sawtooth sweep oscillator; dc incremental. Note: Internal modulation signals available at EXT MOD binding posts. External: dc coupled to 20 kHz (1 volt r.m.s. required for 16 kHz deviation) • **Modulation Fidelity**: Within ±1 db to 15 kHz. • **Modulation Distortion**: Less than 3% at 16 kHz deviation • **Residual FM**: Less than 100 Hz at 460 MHz. • **Deviation:** ±16 kHz peak. Direct reading on panel meter for all ranges. Accuracy ±10%, uncalibrated ±32 kHz switch for sweep alignment. (Not available on Model 1418) • **Frequency Stability:** Less than 0.001% frequency shift (short term, 5 minute stability) after 1-hour warm-up. • **Leakage:** Double shielding for oscillator unit and multisection individually-shielded r-f filters reduce stray leakage to levels low enough for accurate sensitivity measurements to 0.1 uV. • **Power Supply:** 115 or 230 volts ±10%, 50-60 Hz, 21 watts. • **Weight:** 12.15 kg (27 lbs.) with cover. **Dimensions:** 25 cm (10'') high x 35 cm (14'') wide x 26.87 cm (10¾'') deep, with cover.



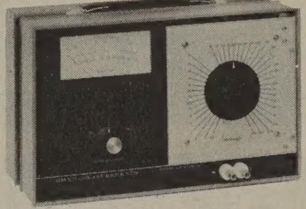
MODEL 950 Field Strength Calibrator

Carrier Frequency: Calibrated 54 to 250 MHz in 2 bands; dial also segmented by TV channels 2 through 13 and CATV channels A through N (CATV pilot frequency 73.5, 112.5 and 225 MHz). Special frequencies on request. • **Frequency Accuracy:** ±0.5% (hand calibrated). • **Attenuator:** Piston type. • **Output Voltage:** 100,000 microvolts across 75 ohms automatically maintained and metered. Can be attenuated to 0.3 microvolts. Calibrated +40 to -70 dBmV. • **Signal Level Accuracy:** ±.75 dB at 100,000μv. • **Source Impedance:** 75 ohms resistive (other impedances on request). • **Power Supply:** 115 or 230 volts ±10%, 50-60 Hz, 12 watts. • **Dimensions:** 17.99 cm (7'') high x 32.39 cm (12¾'') wide x 19.05 cm (7½'') deep.• **Weight:** Approximately 5.90 kg. (13 lbs.)



MODEL 920 Standard Deviation Meter

Carrier Frequency Range: 25 to 1000 MHz. (25 to 50 MHz local oscillator provides useful harmonics to 1000 MHz.) • **Sensitivity:** 25 millivolts from 25 to 500 MHz; 50 millivolts from 500 to 1000 MHz. • **Residual Frequency Modulation:** Less than 100 Hz at 500 MHz. • **Input Impedance:** Nominal 50 ohms. • **Deviation Ranges:** 0 to 2 kHz; 0 to 6 kHz; 0 to 20 kHz. • **Deviation Accuracy:** ±3% of full scale. • **Audio Distortion:** Less than 1% at PHONES jack. • **Modulation Frequency Response:** Flat from 100 Hz to 8 kHz. • **Speaker Output:** 200 milliwatt audio amplifier with de-emphasis; matched to built-in speaker. • **Scope Output:** Provides for visual observation of modulated signal without de-emphasis. • **Size:** 22.54 cm. (8-7/8'') high x 18.42 cm. (7-¼'') wide x 20.95 cm. (8-¼'') deep with cover and back containing power supply. • **Weight:** 4.54 kg. (10 lbs.) 5.67 kg. (12-½ lbs.) with battery . • **Power Supply:** 115 volts ±10%, 50-60 Hz; 12-volt storage battery or 9 ''D'' size dry cells. 3 watts maximum.



MODEL OP-963 Output Power Meter

Power Range: 0.1 milliwatt to 100 Watts in 5 ranges -10 to +10 dbm, ref. level 1 mw. • **Power Accuracy:** Indicated power accurate within ±0.25 db at full scale reading. • **Impedance Range:** 2.5 ohms to 20,000 ohms in 40 steps. • **Impedance Accuracy:** Within ±2% of indicated value 20 Hz to 20 KHz. • **Mounting:** Portable, extruded aluminum case with handle. • **Weight:** Approximately 5.4 kg (12 lbs.) • **Size:** 34.29 cm (13½'') wide x 22.88 cm (9'') high x 17.14 cm (6¾'') deep.

MODEL 159 SERIES Megacycle (Grid-dip) Meter

159-LF OSCILLATOR (100 kHz to 4.5 MHz)

159-RF OSCILLATOR (2.2 MHz to 420 MHz)

159-UHF OSCILLATOR (420 MHz to 940 MHz)

159-Power Supply Only

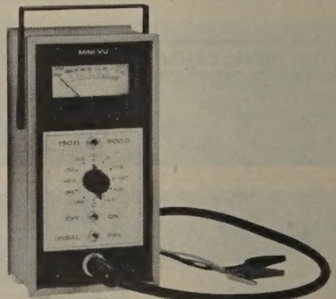
159 COMBINATION (100 kHz to 940 MHz)
One each of above units.

MODEL CB-27E Service Monitor

RECEIVER & TRANSMITTER SERVICING

Frequency Accuracy: ±3 PPM (.0003%) of mid-channel frequency at 25°C (77°F) +10 PPM (.001%) over operating range. • **Frequency Stability:** ±2 PPM (.0002%) in any 10 minute interval, after 1 second lock-up. • **Frequency Setability:** Frequency can be shifted ±5 kHz from mid-channel. • **Output Voltage:** 0.1 microvolt to 100 millivolts (-7 to -128 dBm) variable and maintained within ±2 dB. Resistive attenuator with five 20 dB steps plus a 20 dB vernier for any step. • **Amplitude Modulation:** Internal: 1 kHz with less than ±0.5%distortion variable from 0 to 100%. Calibrated at 30% to within ±5% of reading. External: 50 Hz to 5 kHz also variable from 0 to 100% modulation. • **Spectral Purity:** Harmonics: -40 dB relative to fundamental. In Band Non-Harmonics: (Mixer products, spurs, etc.) -50 dB relative to carrier peak. AM Noise Floor: -40 dB (related to 1 kHz at 30% modulation). • **RF Leakage:** Less than 0.1 microvolt 1'' from any surface. • **I.F. Output:** 455 kHz crystal, internally or externally modulated, plus two unassigned I.F. crystal positions.

RF Power Measurements: AM carrier output to 8 watts (±5%F.S.) average. SSB output to 24 watts (±5% F.S.) peak envelope power (PEP). • **Modulation Measurements:** 0 to 100% referenced to a 4 watt carrier output. Calibrated at 80% modulation to within ±5% of reading. • **Mid-Channel Accuracy:** Transmitter offset from mid-channel can be read from the panel meter and monitored down to zero beat against the accurate time base standard. • **Audio:** The built-in speaker, external jack and scope output jack • **Dimensions:** 15.2 cm (6'') high x 31.8 cm (12½'') wide x 19.1 cm (7½'') deep. • **Weight:** 5 kg. (11 lbs.) less batteries.



MODEL 945 Mini-Vu Audio Level Meter

Input: Balanced or unbalanced (selected by switch) • **Input Z:** 10K ohms min. • **Frequency Response:** ±1 dB 30 Hz to 15 kHz • **Range Selector:** 12 positions, eleven 10 dB positions (-60 VU to +40 VU) plus a calibrate position. • **Power Source:** 6.75 Volt Mercury Cell, Approximate life 250 hrs. operation • **Input Connector:** Tip, ring and sleeve jack on six foot test cable • **Operating Temp. Range:** -10°C to +55°C ambient • **Accuracy:** ±1dB • **Compact Size:** 17.78 cm (7'') high x 10.16 cm (4'') wide x 7.62 cm (3'') deep. • **Weight:** .91kg (2 lbs.)

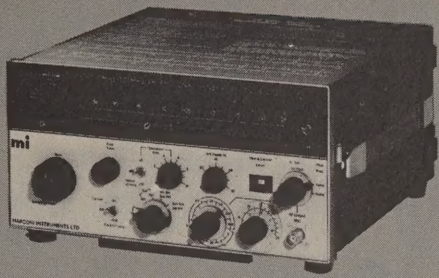
Automatic Modulation
Meter for Mobile Radio



Model 2015/2
Transistorized replacement for Model 1066B/6.

FM/AM SIGNAL GENERATORS

DESCRIPTION	FREQUENCY	FEATURES
FM/AM SIGNAL GENERATOR Model 2002B	10KHz to 88MHz	0.1μV to 1V ±1dB, fully solid state, AM variable to 100%, FM deviation ±1KHz to ±50KHz max. dependent upon range. Incremental frequency controls with discrimination of 0.025% and direct readout in KHz. Xtal calibrator. External frequency shift permits phase mod. or phase locking. Digital Synchronizer available.
FM/AM SIGNAL GENERATOR (6625-913-7223) Model 995B/Series	200KHz to 220MHz	0.1μV to 100mV. Calibrated ΔF. Step attenuator, Crystal standardized; extremely stable. Deviation ±600KHz on top bands. Has simultaneous FM & AM. Also available for narrow band working FM spurious less than 25Hz Model 995B/5.
FM SIGNAL GENERATOR (6625-937-2801) Model 1066B/6	10MHz to 470MHz	0.1μV to 100mV. FM at 1 KHz and 5 KHz internal, deviation to ±400 KHz, ΔF to ±100 KHz, both meter monitored. Stability .0025% 10 min. Xtal calibrator.
FM/AM SIGNAL GENERATOR Model 2015/2	10 MHz to 520 MHz	Transistorized replacement for Model 1066B/6. Automatically leveled output 0.1 uV to 100 mV; internal modulation at 1 kHz and 5 kHz, FM deviation to 400 kHz, AM to 80%; No non harmonic spurious; Stability .002% 5 min. Digital Synchronizer Model 2171 optional.
FM/AM SIGNAL GENERATOR Model 2015	10MHz to 520MHz	Covers 10MHz to 520MHz in 11 bands with discrimination permitting tuning to narrow band (±3KHz) receivers. FM deviation 10KHz and 100KHz. AM to 80%. Precision ALC eliminates need for external set carrier control. Fundamental signal with low spurious content. Will also operate from external 24VDC. Portable, 5½" high 11" wide. Lowest cost for performance generator on USA market today.
DIGITAL SYNCHRONIZER Model 2171	10MHz to 520MHz	Used with Model 2015 to set frequency to stability of ±2 in 10^7 to resolution of 100Hz. Once locked frequency may be digitally tuned to at least 1% from center frequency, with full modulation capabilities retained.
LOW NOISE VHF/UHF FM SIGNAL GENERATORS Models 2011-2012-2013	130MHz to 180MHz 400MHz to 520MHz 800 MHz to 960MHz	Highly stable low noise unit for testing narrow band mobile receivers. Velvet vernier tuning. Infinitesimal leakage. Noise less than —140dB/Hz, VHF/UHF; —125dB/Hz, 800 — 960MHz, 20KHz from carrier. Output level 0.01μV to 100mV into 50Ω FM deviation to ±30KHz f_m 300Hz to 3KHz.
AM/FM SIGNAL GENERATOR AND SWEEP GENERATOR Model 2008	10KHz to 510MHz	This unique combination Generator/Sweeper provides both facilities without sacrifice to the precision quality of either function. Eleven bands with 1 : 1.5 cover span from VLF thru UHF. Output 0.1μV to 100mV into 50Ω. Stability 5 p.p.m. FM deviation ±3KHz ±10KHz ±30KHz ±100KHz and above 45MHz ±300KHz. Mod. frequency to 125KHz. AM to 80%. Comprehensive sweep facilities on all bands. Full Modulation facilities may be retained in sweep mode. Xtal calibrator and markers.

FM DEVIATION METERS

FM DEVIATION/ AM MODULATION METER Model 2300A (USA) (6625-480-8706)	4MHz to 1000MHz to 2500MHz using ext. oscillator	Wide range, mod. freq. up to 200KHz; deviation ranges ±1.5, ±5, ±15, ±50, ±150, ±500KHz. Local oscillator can be xtal locked, external oscillator can be used. De-emphasis 50μsec. 75μsec. switch selected. FM accuracy ±3% for deviation up to ±500KHz f_m 30Hz to 150KHz. AM modulation two ranges 30% and 100% mod. freqs. 30Hz to 50KHz (carrier 4 to 350MHz).
FM DEVIATION/ AM MODULATION METER Model 2300B	4MHz to 1200MHz	Measures FM deviation to 500KHz, AM depth to 95% at carriers up to 400MHz. Very low internal noise allows narrow deviation measurements. Filter for noise measurement. De-emphasis 50μS, 75μS and 750μS. Distortion and channel separation on FM stereo meets FCC testing requirements.
PORTABLE AUTOMATIC MODULATION METER Model 2304	25 MHz to 1000 MHz	Completely automatic tuning and level setting. Measures FM on ranges 1.5 kHz to 150 kHz, AM 30% and 100% for modulating frequency 50 Hz to 9 kHz. Accuracy 3%. Optional internal rechargeable battery.
PROGRAMMABLE FM/AM MODULATION METER Model 2301A	4MHz to 1000MHz	FM deviation in six ranges from ±1.5KHz to ±500KHz f_m 30Hz to 200KHz demodulated output distortion 0.25%. AM 30% and 100%. Automatic internal carrier level setting.

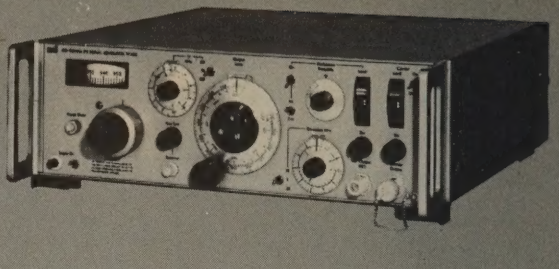
FM/AM Modulation Meter
Model 2300B



Model 2013
Low Noise 800-960MHz
Signal Generator

MOBILE RADIO TEST GEAR

DESCRIPTION	FREQUENCY	FEATURES
PORTABLE AUTOMATIC MODULATION METER Model 2304	25 MHz to 1000 MHz	Completely automatic tuning and level setting. Measures FM on ranges 1.5 kHz to 150 kHz, AM 30% and 100% for modulating frequency 50 Hz to 9 kHz. Accuracy 3%. Optional internal rechargeable battery.
MOBILE RADIO SIGNAL GENERATORS	All Mobile Bands	Special low noise signal generator series for all bands. 130MHz thru 960MHz. See Signal Generator Section, Models 2011, 2012, 2013, and general purpose 2015.
AUTOMATIC DISTORTION METER Model 2337	20Hz to 20KHz	Simultaneous indication of level down to 3mV, distortion down to 0.1% without tuning adjustments. With external filter, the unit becomes ideal for SINAD testing.

DIGITAL COMMUNICATIONS – P.C.M. TEST GEAR

DESCRIPTION	FREQUENCY	FEATURES
MULTIPLEX TEST SET Model 2807	Voice Channel	Both sinewave and pseudo random noise stimulus available to measure channel gain, frequency response, idle channel noise, gain linearity, quantization distortion and interchannel crosstalk. National and International models available.
DATA LINE ANALYZER Model 2809	300Hz to 3400Hz	Used for testing data transmission lines and links; measures peak-to-average rating (PAR), frequency response and system noise level. Has correction for phase-intercept distortion.

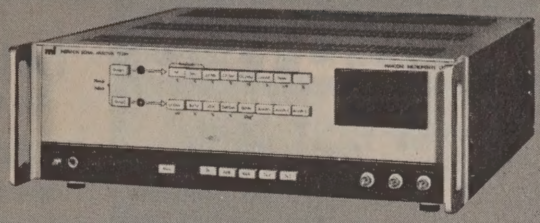
PROGRAMMABLE ATTENUATORS

DESCRIPTION	FREQUENCY	FEATURES
UHF ATTENUATOR Model 2168	DC to 1000MHz	Attenuation range 0 to 139 dB in 1 dB steps. Accuracy ±0.5%, ±0.1 dB at 1KHz, ±1.5%, ±0.2 dB at 1GHz.
MF ATTENUATOR Model 2165	DC to 500KHz	Attenuation range 0 to 99.9 dB in 0.1 dB steps. Accuracy 1% of setting ±0.01 dB. Output/input impedance 600Ω unbalanced. Usable to at least 1MHz.

INTERMODULATION AND BASEBAND TEST GEAR

DESCRIPTION	FREQUENCY	FEATURES
NOISE LOADING TEST SET (6625-965-8625) (AN/GSM 161A) Model 2090A	12KHz to 12.388MHz (i.e. up to 2700 channels)	Solid state unit has built-in standardizing noise source in receiver for gain setting, out-of-band testing, etc. Includes noise generator, receiver and a choice of many different filters. NPR measurements can be made up to 75 dB.
NOISE LOADING TEST SET (6625-591-8383) Model 2090B	12KHz to 12.388MHz	Designed to meet latest CCIR and CCITT accuracy requirements (Recommendation 399-1 Oslo 1966). Includes ALC on generator; suitable for use with A or B series filters.
Model 2099AB		This filter extension box can be added to any 2090A or 2090B system to provide accommodation for up to nine extra high, low or band stop filters and six extra band pass filters with oscillators. Minor modification required to existing generators and receivers to provide access. Simple field modification kits available.
AUTOMATIC WHITE NOISE TEST SET Model 2090C	6 kHz to 12.360 MHz	The automatic alternative to Model 2090B. Provides digital readout in all commonly used measurement units. In programmable mode all control transfers to auxiliary computer or optional Remote Control unit TK2085. Ideal for design, manufacturing, commissioning and maintenance of FDM systems, particular when rapid testing is critical. Suitable for A or B series filters.
HF SPECTRUM ANALYZER Model 2370	30Hz to 110MHz	Comprehensive spectrum analyzer system with dispersion from 20Hz/div to 100MHz full width, resolution 0.1 dB, filter bandwidths from 5Hz to 50KHz, displayed dynamic range 100dB, 10 x 12 cm flicker-free digitally stored display, frequency measurement to counter accuracy. Built in tracking generator for Network Analysis.
TWELVE CHANNEL NOISE GENERATOR (6625-948-4724) Model TM7816A	300Hz to 3400Hz	Generates twelve non-related channels of Gaussian noise from twelve separate solid state sources. Output: each channel 1mW in 600Ω balanced, 300Hz to 3400Hz. Attenuation to —32 dBm in 2 dB steps. Spurious noise in OFF channel (all other channels ON) is less than 15 dBrnC. Programmable option available.
TV AUTOMATIC MONITORING SYSTEM Model 2914/15		See television section overleaf.

Model 2910 series
Non Linear Distortion Analyzer with Sampler



Model 2914
Automatic TV Quality Analyzer

TV TRANSMISSION TEST EQUIPMENT

DESCRIPTION	FEATURES
TV SIDEBAND ANALYZER Model 2360R	Provides a symmetrical or asymmetrical swept video signal for testing video amplifiers or transmitters using 625, 525 or 405 line systems, positive or negative modulation. Uses Converter TM6936 for UHF channels.
TV SWEEPER Model 2361	Main sweep unit has internal rep. rate 0.01Hz to 100Hz with linear, semi log, CW, single shot and manual modes. TV field lock, blanking and phase shift controls and alternate trace separation. Produces ultra flat, low distortion sweep. Plug-ins available: Video 25KHz to 30MHz. VHF 1 to 300MHz, UHF 220MHz to 1000MHz.
TV SWEEP ANALYZER Model 2900	Comprehensive frequency sweep analyzer combines Model 2361 Sweeper and video unit, Blanking and Sync Mixer Model 2908 and Differential Probes unit, Model 2907. Measures response of active or passive transmission networks. Differential measurements on composite signal to an accuracy of 0.01dB. Also measures termination impedance and return loss.
LUMINANCE/CHROMINANCE GAIN & DELAY TEST SET Model 2904/1	Measures gain and delay inequality with gain discrimination 0.5dB, delay discrimination 2 nanoseconds, visible display of misalignment with waveform monitor.
NON-LINEAR DISTORTION ANALYZER with SAMPLER Model 2910	Makes accurate, simultaneous measurements from Vertical Internal Test Signal or Full Field Signal of differential gain, differential phase and luminance non-linearity, even in the presence of noise. Gain and phase can be directly measured against a calibrated pulse which can be varied over the ranges of 0 to 11% in .1% steps and 0 to 11° in .1° steps respectively, with the luminance non-linearity being resolvable down to 0.1% using an external scope display.
TV TESTLINE GENERATOR AND INSERTER Model 2913	Erases and inserts Vertical Interval Test Signals on selected lines, Generates full field test signals. Can be remote programmed. Ideal for use with TV Automatic Quality Monitoring System. NTSC and PAL versions available.
TV AUTOMATIC QUALITY MONITORING SYSTEM Models 2914 and 2915	Automatically analyzes and displays all essential parameters including: amplitudes of bar, sync, various T pulses, and noise; luminance linearity, chrominance gain, chrominance/luminance crosstalk, differential gain and phase, etc., all measured in the most suitable units of measure and presented digitally when under manual control (see illustration above). Data Selector Model 2917 enables both local and remote print out of results. Versions to meet International, F.C.C. and NTC recommendations.

COMMUNICATIONS RECEIVERS

Model 958	10KHz to 30MHz	A unique series of communications receivers covering 10KHz thru 470MHz. All feature superb construction and top performance. Low frequency models provide AM/CW/SSB, high frequency offer AM/FM. Xtal locking facility optional on all models to enhance stability. Optional Panoramic Display Units available.
Model 1830	120KHz to 30MHz	
Model 990R	27MHz to 240MHz	
Model 1990R	25MHz to 470 MHz	

BRIDGES AND Q METERS

UNIVERSAL BRIDGE Model 1313A	1KHz and 10KHz 20Hz to 20KHz External	0.1μH to 110H, 0.1pF to 100μF, 0.003Ω to 110MΩ. Accuracy 0.1%. Built-in osc. and det. Direct reading; simplest possible operation. Uses adapter TM6113 for biasing inductors to 200mA.
PORTABLE UNIVERSAL BRIDGE Model 2700	1KHz internal 20Hz to 20KHz External	0.2μH to 110H, 0.5pF to 1100μF, 0.01Ω to 11MΩ. Accuracy 1%. Transistorized, simple. Measures incremental L, electrolytics & non-linear resistance using external bias supplies.
Q METER Model 1245A	1KHz to 300MHz	Q ranges 5 to 1000, ΔQ 25-0-25. Accuracy 5% to 100MHz, 20% to 300MHz. Calibrated capacitor 7.5 to 500pF, ΔC ranges ±1 and ±5pF. Extremely stable and easy to operate. Uses separate oscillators. Dielectric and Series Loss Test Jigs available. Also HF & LF inductors.

MICROWAVE SIGNAL SOURCES

Model 6055	0.85 to 2.15GHz	A unique series of transistor and gunn diode microwave signal sources covering 400MHz to 18.0GHz. Digital display of frequency, accuracy typically ±1%. Variable output levels typically 10mW on gunn diode sources. Up to 150mW on transistor models, Gunn Diode Models are 6057, 6058 and 6059. Special frequency coverages on request.
Model 6056	2.0 to 4.0GHz	
Model 6057	4.5 to 8.5GHz	
Model 6058	8.0 to 12.5GHz	
Model 6059	12.0 to 18.0GHz	
Model 6070	0.4 to 1.2GHz

TAUT BAND PANEL METERS

2% F.S. accuracy in ranges for all applications

MOVING MAGNET PANEL METERS

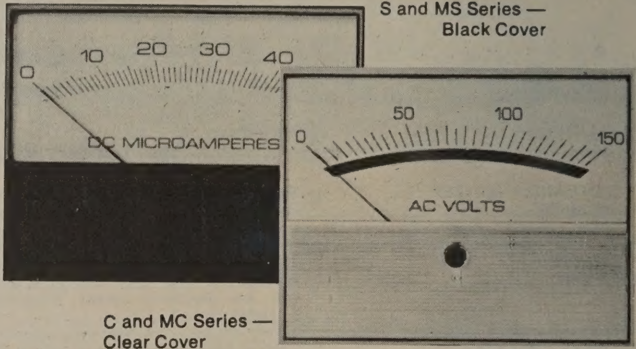
5% F.S. accuracy, high quality & style, low cost

Available in Taut Band & Moving Magnet Versions

SURFACE MOUNT

S and MS Series — Black Cover
Handsome aspect ratio and clean-cut detailing add distinction to any panel. Optional colors available.

C and MC Series — Clear Cover
Clear acrylic case front reduces contrast between the meter and adjacent panel for a pleasing overall effect.

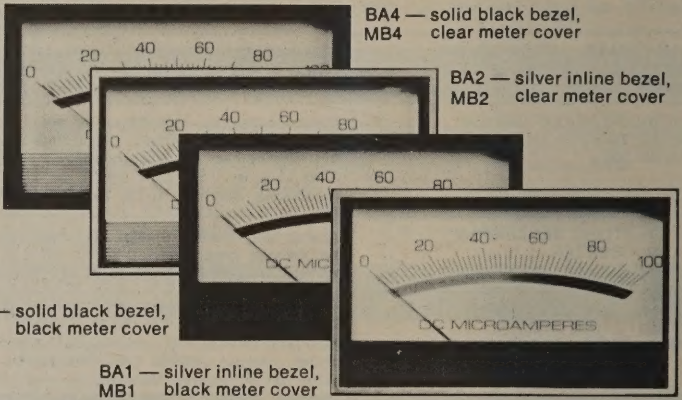


S and MS Series — Black Cover

C and MC Series — Clear Cover

BEZEL MOUNT

BA and MB Series
Actually a package comprising a surface mount meter and a slender, graceful bezel in the combination shown. Mounting hardware and instructions are included. Bezels are available in optional colors; all meter options apply.



BA4 — solid black bezel,
MB4 clear meter cover

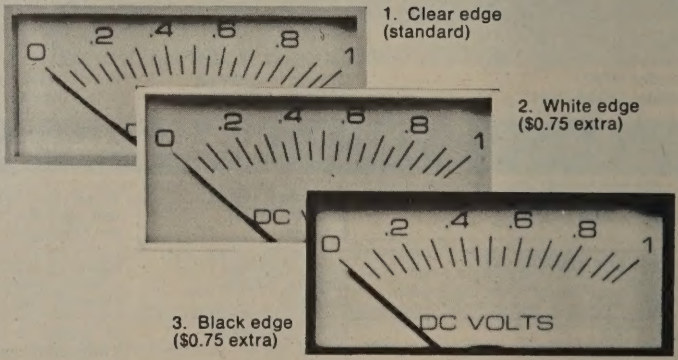
BA2 — silver inline bezel,
MB2 clear meter cover

BA3 — solid black bezel,
MB3 black meter cover

BA1 — silver inline bezel,
MB1 black meter cover

WINDO-MOUNT™

W and MW Series
A sophisticated and original design that has been widely imitated, these original Windo-mount meters are easily installed without special adapters, and do not sink the meter dial deep behind the panel. Uniquely attractive edge options are available, as shown at right.



1. Clear edge (standard)

2. White edge ($0.75 extra)

3. Black edge ($0.75 extra)

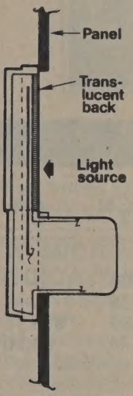
Available in taut band and moving magnet versions



L SERIES

Trans-Lit™ Panel Meters

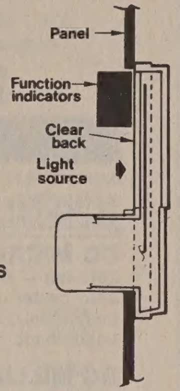
- Dial printed on translucent back for illumination through the meter dial — highest quality lighting of any meter.
- Optional smoke-grey covers enable "meter blackout" technology.
- Save money in installation and illumination accommodations.
- Available in Surface Mount, Bezel Mount, and Windo-Mount styles.

Available in taut band versions

V SERIES

Thru-Vue™ Panel Meters

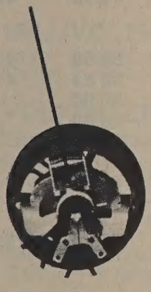
- Clear area over dial accommodates function indicators, etc., for reading "through the meter".
- Optional smoke-grey covers enable "meter blackout" technology.
- Bring high volume design advantages to custom and small run units.
- Multiple metering functions visible through one cutout — save space and installation costs.



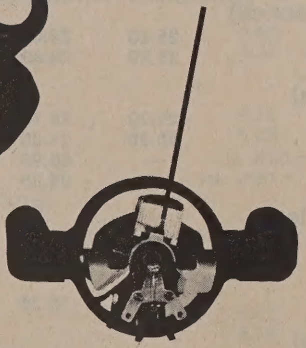
HIGH TORQUE METER MOVEMENTS

Unpointered • Pointered • Dial Mounted

Stnd. Type



Round-clamp mt.



FP-3 (FPZ also available)

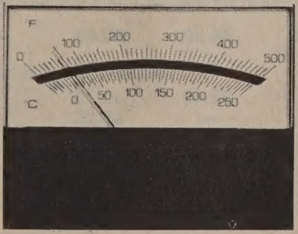
Modutec furnishes large numbers of uncased and dial mounted mechanisms to a variety of users. Units are available to fit standard cutouts and also are manufactured to meet individual requirements for performance, size, and shape. Made in USA.

The high torque and other desirable features of Modutec meter movements make them very useful in applications such as torque motors, recorder pen motors, flag indicators, etc.

High precision taut band movements, or ultra-economical moving magnet movements, will provide ideal answers to your needs, with benefits in cost, appearance, and space utilization.

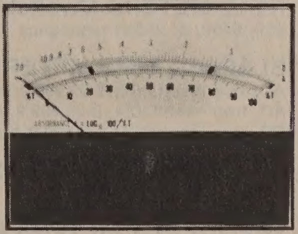
Phone or write for full information.

PYROMETERS & THERMOCOUPLES



Utilizing precise and reliable Modutec taut band movements, in all panel meter styles, sizes 1½″ through 5½″, Modutec pyrometers have thermistor copper error compensation, and are supplied in 19 ranges from −150°F to +3000°F. Many useful options can be incorporated. Thermocouples are stocked in useful variety, in types E, J, K, R, and T. Wire, connectors, and hardware are also available.
For details request Catalog PYR-1105.

CONTROL METERS



A new approach to actuating and monitoring IC control circuits.
Modutec Control Meters have precise taut band movements with low and/or high set potentiometers incorporated into the meter, the setting being indicated by pointers visible through the mirror-scale slot. They are available in 3½″, 4½″, and 5½″ sizes.
For information, including detailed typical applications, request Catalog CM-1012.

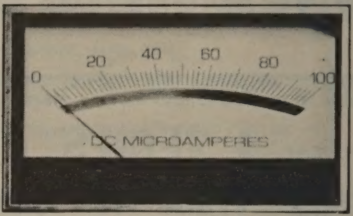
MODUTEC

(see preceding spread for description)

TAUT BAND PANEL METERS

Modutec 100° Taut Band Panel Meters are Number 1 nationally in sales — for many good reasons! Meet or exceed the performance requirements of USA STD C-39.1. Full-scale accuracy 2% (AC 3%), tracking 1.5% (AC 2%), repeatability 0.5%. Trend-setting styling, high torque, high precision, low friction movements. Numerous options available for immediate incorporation in any catalog meter. Plus fast service!



Ranges, Sizes, Prices (Request Modutec Catalog 262 for detailed information)

Note: Prices are approximately median for range groups; catalog price for any specific range may differ slightly.

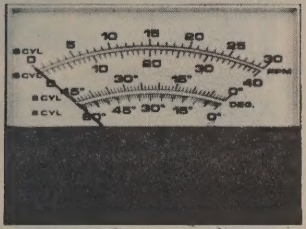
MODUTEC

(see preceding spread for description)

MOVING MAGNET PANEL METERS & INDICATORS



M-Series Panel Meters are for those users — high volume in particular — who do not require the rigorous performance characteristics of Modutec Taut Band Meters. Featuring sales-making appearance and advanced engineering, M-Series Meters are rugged and dependable, with 5% f.s. accuracy, improvable to 3%, as one of many catalog-listed options available in this unique line of low-cost meters.

M SERIES — Ranges, Sizes, Prices (Request Catalog MM353 for detailed information)

Note: Prices are approximately median; catalog prices for specific ranges may differ slightly. SIZE:	1"	1½"	2" SQ. or 2½"	3½"	Edge Reading (1.8")
DC MICROAMMETERS & LEVEL (BALANCE) INDICATORS					
Standard Sensitivity					
Zero Left — 3 ranges: 0-200μA to 0-500μA	$5.75	$6.12	$6.58	$6.92	$5.61
Zero Center — 3 ranges: 100-0-100μyA to 500-0-500μA	5.61	5.95	6.40	6.81	5.43
High Sensitivity					
Zero Left — 4 ranges: 0-200μA to 0-1000μA	7.61	7.83	8.24	8.58	6.86
Zero Center — 3 ranges: 100-0-100μA to 500-0-500μA	7.72	7.95	8.35	8.76	6.97
DC MILLIAMMETERS					
Zero Left — 14 ranges: 0-1mA to 0-500mA	4.63	4.97	5.38	5.83	4.11
Zero Center — 8 ranges: 1-01mA to 500-0-500mA	4.75	5.09	5.54	6.06	4.34
DC AMMETERS (Battery & Circuit Condition Indicators)					
Zero Left — 9 ranges: 0-1A to 0-30A Ammeters with ext. shunts can be supplied to 125A	4.40	4.75	5.26	5.72	4.11
Zero Center — 6 ranges: 1-0-1A to 25-0-25A	4.58	4.97	5.20	5.90	4.29
DC MILLIVOLTMETERS					
Zero Left — 0-50mV, 0-100mV	4.92	5.26	5.72	6.18	4.34
Zero Center — 50-0-50mV, 100-0-100mV	5.04	5.32	5.83	6.29	4.40
DC VOLTMETERS (Battery & Circuit Condition Indicators)					
Standard Sensitivity					
Zero Left — 20 ranges: 0-1V to 0-500V (Multiplier resistor furnished externally above 15V)	4.86	5.20	5.66	6.29	4.23
Zero Center — 9 ranges: 5-0-5V to 500-0-500V	5.04	5.38	5.90	6.52	4.58
High Sensitivity					
Zero Left — 19 ranges: 0-1V to 0-500V	5.20	5.54	6.06	6.69	4.75
Zero Center — 9 ranges: 5-0-5V to 500-0-500V	5.38	5.72	6.24	6.86	4.92
AC MILLIAMMETERS					
Zero Left — 6 ranges: 0-10mA to 0-500mA	4.86	5.26	5.66	6.29	4.40
AC AMMETERS — AVAILABLE ON SPECIAL ORDER					
AC VOLTMETERS (Multiplier resistor furnished externally above 15V)					
Zero Left — 8 ranges: 0-5V to 0-300V	5.09	5.43	6.01	6.40	4.63
VU METERS Supplied with either recording or broadcasting type scales, printed in black and red on white background. Designed to read zero VU (100%) with 1.23V applied to meter with the circuit supplied. DC Type are the same indicators, but the resistor/rectifier package is not supplied.					
AC TYPE — supplied with resistor/rectifier package					
Standard Sensitivity (1 mA basic)	7.20	7.61	8.06	8.58	6.81
High Sensitivity (200μA basic)	9.44	9.83	10.30	10.81	9.10
DC TYPE — resistor/rectifier package not supplied					
Standard Sensitivity (1 mA basic — 300 ohms)	6.63	5.90	6.35	6.86	5.15
High Sensitivity (200μA basic — 1140 ohms)	7.67	8.06	8.52	9.04	7.26

Bezel Mount — Available only on 1½", 2½", 3½" meters; added unit cost $2.40, before discount.
Surface Mount and Windo Mount styles with clear cover — deduct $0.35 from unit prices, before discount.

DISCOUNT SCHEDULE (per type): 1-9 list; 10-24 10%; 25-99 20%; 100-249 30%; 250-499 40%; 500+ inquire.

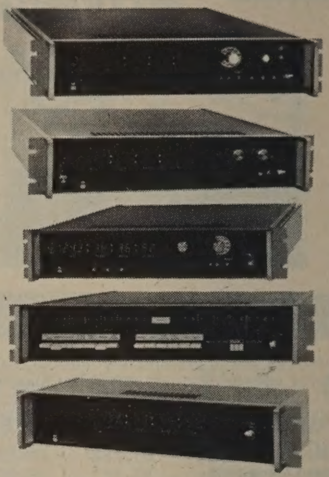
moxon INSTRUMENTATION

TIMING PRODUCTS NEW TIMING PRODUCTS ADVANCE STATE-OF-ART TECHNOLOGY



New generation timing products meet current demands and easily expand to interface with new computer requirements . . . and without permanent printed wire mother boards.

Applications include • indexing magnetic tape for data reduction • common reference for calculating velocity, frequency, etc. • sync. remote test sites to N.B.S. • precise time correlation for hospital intensive care • automatic event sequencing for industrial processing • computer time entry and automatic computer controlled data reduction.

MODEL 514 TIME CODE GENERATOR — Supplies all popular codes. Serial or parallel output, BCD or binary.

MODEL 520 TIME CODE TRANSLATOR — Accepts all standard and many non-standard time codes. Standard decoded outputs: serial, parallel and synchronization pulse rates.

MODEL 540 TIME CODE TRANSLATOR/GENERATOR — Provides translation and generation within the same chassis.

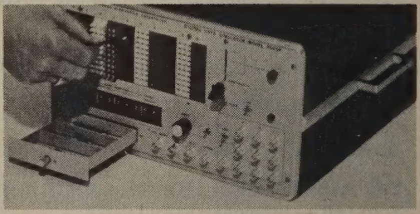
MODEL 524 TAPE SEARCH AND CONTROL UNIT — Interfaces Models 520 or 540 to any standard instrumentation tape recorder and provides output for search and playback.

MODEL 552 TIME CODE REMOTE DISPLAY — Converts parallel BCD for seven segment readout, anywhere in data line.

MODEL 562 TIMING TERMINAL UNIT — 21 channel plug-in unit expands to most popular amplifier and driver applications.

MODEL 544 TIME CODE TRANSLATOR/GENERATOR/TAPE SEARCH — Provides simultaneous translation, generation and search-to-start functions for highest performance at low cost.

DIGITAL GENERATORS WORLD'S LARGEST DIGITAL DATA GENERATOR SELECTION



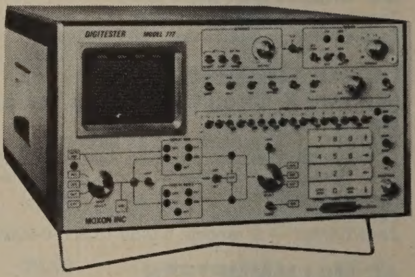
These precision, compact instruments utilize exclusive patented linear programming to provide the equivalent of up to 960 toggle switches . . . in a portable bench-top housing. All units have both serial and parallel outputs with data rates in excess of 10 MHz.

MODEL 912 — multiple serial words from 4 to 960 bits or 12 parallel outputs of 80 bits each.

MODEL 912CR — 960 bits • IBM card programming from front panel.

MODEL 916 — 480 bits serial or 16 parallel outputs of 30 bits each or 8 outputs with 60 bits or 2 outputs with 240 bits each.

DIGITAL GENERATOR/ANALYZER/COMPARATOR WORLD'S FIRST 3 IN 1 INSTRUMENT



The Digitester Model 777 is a new 1024 bit instrument offering more digital and/or micro-processor development and test capabilities than any single unit currently available.

A keyboard is used to generate and a CRT displays the bit pattern program, ready for edit or storage in an internal memory, or for transmission to the Device Under Test (DUT). The 777 receives and displays DUT bit patterns and compares the received pattern with the anticipated response.

Features of the Digitester include • generation/analysis/comparison of 1024 serial bits or 64 parallel words of 16 bits each at rates up to 20 MHz • simultaneous generate and receive • adjustable input thresholds/output levels • 1 bit inversion • program of start/stop • keyboard programming or edit • 4 internal memories • big jitter-free 5″ CRT display • internal crystal, variable or external clock • 16 bit serial or parallel combinatorial trigger (pre-/post trigger).

VIDEO CHARACTER GENERATORS COMPLETE GENERATE/EDIT SYSTEM FOR ANY TV APPLICATION

VIDEO TITLING GENERATOR
MODEL 74

This series of Video Character Generators produce 16 lines of 32 characters each in black or white for commercial broadcast or closed circuit TV applications.

Character messages may first be generated and displayed in a preview position prior to insertion into a program. Characters are easy-to-read 7 x 8 dot matrix, in place of conventional 5 x 7.

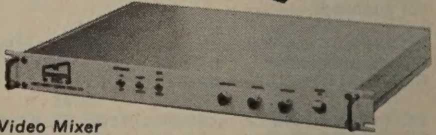
Message viewing modes are full page and 1-line or 2-lines, using a roll-up/roll-down feature that displays individual lines at locations on the screen selected by the cursor.

A second page of internal memory may also be programmed and displayed in all three modes: page, single or dual line.

The Model 74 consists of a generator and integrated keyboard, providing standard 64 character ASCII set.

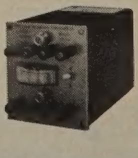
Generators also include character enhancement and selectable black or white characters.

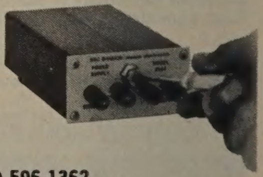
The units are supplied with all connectors required for connection to composite sync and video inputs which provide program, preview and sync outputs.



Model 557 Video Mixer

POWER SUPPLIES FINEST ISOLATED POWER SUPPLIES AVAILABLE IN WIDE RANGE OF OUTPUTS





To insure testing results that are precise, try one of the Mitey Mite Series Power Supplies that essentially eliminate noise, ripple and spikes . . . power supplies that provide battery quality DC . . . 0 to 30 volts with current to 0.5 amps. DC isolation: 10,000 megohms, AC isolation: less than 0.1 pF and ripple typically below 20 microvolts peak-to-peak.

moxon TRANSDUCERS & GAUGING SYSTEMS

VARIABLE RELUCTANCE TRANSDUCERS

A LEADING SUPPLIER OF PRECISION TRANSDUCERS SINCE 1938

Moxon variable reluctance transducers offer several advantages, including direct measurement, friction free operation for long life, and low cost. In addition to the types listed below, Moxon manufactures special purpose transducers to meet specific customer applications along with compatible electronics.

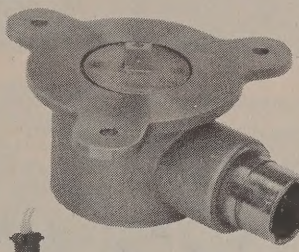
LINEAR POSITION — Offered in 3-wire, 4-wire and DC-DC types • displacement ranges 0.01 to 16 inches • linearity ± 0.1% to 1% full scale.

MILITARY — Linear displacement transducers, built to military specifications, meet or exceed performance parameters listed above.

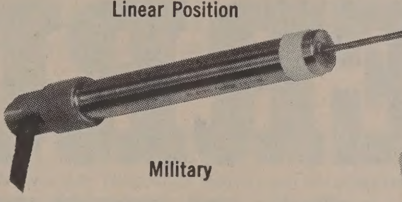
ROTARY — Offered in 3-wire or 4-wire types • displacement ranges 0 to ± 60° • linearity ± 0.5% typical.

TORQUE — Offers readout in both rotating directions • range 5 to 3,000 inch pounds • speeds to 6,000 RPM • optional RPM pick off • DC input/DC output.

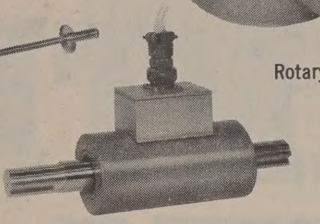
Linear Position



Rotary



Military



Torque

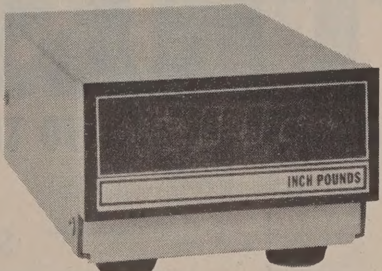
GAUGING SYSTEMS

PRECISE DIGITAL READOUT OF 1 TO 20 TRANSDUCERS

MICRO-MOX

A compact one-channel instrument that accepts a bipolar analog signal from any DC transducer and converts it into a precise digital readout. The easy-to-read 7-segment digital display has $\frac{1}{2}$" high characters on a black background. Meter options are 3½ or 4½ digits plus overflow with 10ms to 0.1% response time. Calibration and meter control access behind removable front meter bezel.

Integral power supply has 5 or 24VDC regulated output @ 40ma full scale • isolated serial BCD output data • polarity and print command • calibration in engineering units such as inches, grams, inch pounds, foot pounds, millimeters, etc.



MICRO COMPUTER GAUGING SYSTEM

REDUCES GAUGING TIME OVER 90%

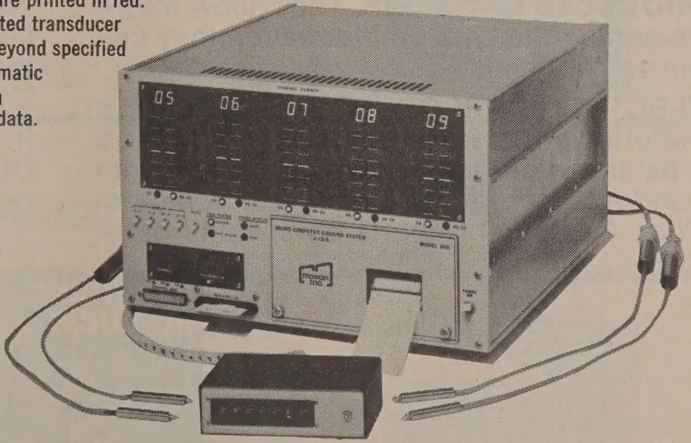
The Model 360 AUTO-MASTER is the first system of its kind. In one installation this system reduced calibration and inspection time from 6 hours to 20 minutes.

The system employs a built-in microprocessor that provides fast handling of 1 to 20 electro-mechanical transducer inputs. This allows up to 20 transducers to be positioned and automatically calibrated to measure any parameter that can be gauged by micrometer accurate linear transducers (see below).

Measurement readout is provided by vertical LED arrays and GO/NO-GO comparator indicators for each channel.

In addition, a printed record of all measurements is provided for subsequent diagnosis on command from a front panel pushbutton. The printout also includes day, time of day, work station identification and serial number of the unit under test. Readings not within limits are printed in red.

Disconnected transducer probes or those beyond specified limit initiate automatic system shut-down assuring reliable data.



GAUGING SYSTEM TRANSDUCERS

These precision transducers are of the linear DC-DC type. They employ separate but integral electronics so the smaller transducer housing, which fits standard gauging tool holders, can be more easily installed in confined spaces. Shielded electronics also reduces electrical interference.

Variable DC voltage output is proportional to mechanical deflection • a 2-ounce pressure produces full scale deflection of 0.05 inch • standard dome tip easily replaced with other A.G.D. gauging tips.

SLIMLINES . . . the METERS that GROW

the BROADEST and MOST POWERFUL line of digital meters . . . IN THE WORLD

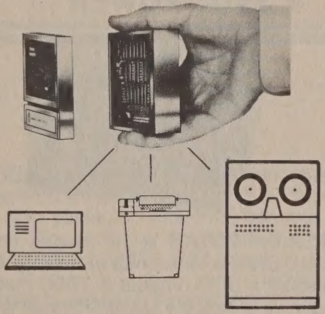
METERS . . . what an inadequate word to describe these compact workhorses! Most meters on the market are designed to be looked at. Slimlines work for a living.

They combine high-performance measurement circuitry with all of the control inputs and data outputs needed for fast, efficient systems interface. And their quality is backed up by an unheard-of 5-year warranty!

THERMOCOUPLE
THERMOMETER
+1825 F
NATIONWIDE ELECTRONIC SYSTEMS, INC.

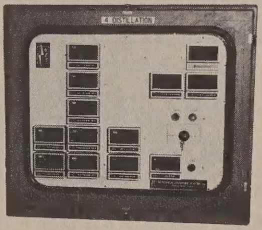
SOLVE MEASUREMENT PROBLEMS!

The widest selection of meters on the market, with a model to fit your need. **VOLTMETERS** from $76, **AMMETERS** from $185, **OHMMETERS** from $255, **WATTMETERS** from $416, **TRI-SCALE METERS** from $580, **CUSTOM METERS** with special scaling from $300, **TRANSDUCER READOUTS** from $88, **FREQUENCY METERS** and **TACHOMETERS** from $300, **CLOCKS** from $76, **CALENDARS** from $199, **STOPWATCHES** from $200, **RTD THERMOMETERS** from $380, **THERMISTOR THERMOMETERS** from $280, **THERMOCOUPLE THERMOMETERS** from $280, **COUNTERS** from $175, **TENSION & COMPRESSION METERS** from $560, **VACUUM & PRESSURE METERS** from $550, **REMOTE DISPLAYS** from $145, **POWER FACTOR METERS** from $415. NEW PRODUCTS: **PRODUCTION RATE METERS** from $240, **PRODUCTION YIELD** from $240, **WATT-HOUR METERS**, $600, **VARS METERS** from $500, **RELATIVE HUMIDITY METERS** from $455.



TRANSMIT & RECORD DATA!

A NES EXCLUSIVE! Plug-on **ASCII BUSTLES** (from $180) give Slimlines incredible power: connect 100 Slimlines to a single pair of wires . . . meters transmit readings in serial ASCII to teletypewriters or printers for logging, CRT terminals for real-time dislay, computers or microprocessors for on-line processing. Address meters at random or program for automatic self-scan. Build a complete system one step at a time. **RECEIVING BUSTLES** . . . control equipment from a teletypewriter. **BCD BUS BUSTLES** from $160: up to 100 Slimlines on a parallel BCD data bus . . . use with printers, microprocessors, minicomputers, etc. **ISOLATOR/DRIVER INTERFACES** (from $150): isolating buffers and interface to high-level logic.

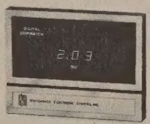


AUTOMATE!

Monitor the reading of **any Slimline** and control, alarm, or automate! **COMPARATOR/CONTROLLERS** (from $196) do it automatically, providing outputs for solid-state relays, indicators, motor controls, solenoid actuators, etc. **PRELOADERS** from $124 and **SCANNERS** from $175, too.

COMPLETE SYSTEMS!

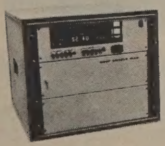
We will design and build instrumentation and control systems to solve specific problems . . . large or small, at reasonable cost. Call our applications engineering department.

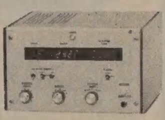


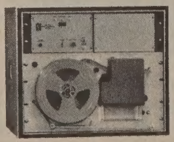
READ-ONLY MODELS = LOW COST!

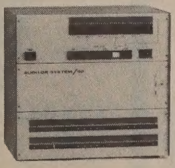
Same high quality, appearance, and **5-year warranty** as the other Slimlines . . . only the data outputs and control inputs have been left off to substantially lower the cost! **CLOCKS, VOLTMETERS, TRANSDUCER READOUTS, STOPWATCHES & COUNTERS** with more units due for release shortly!

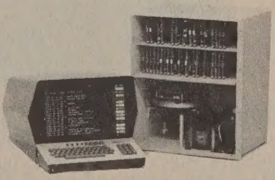
OTHER PRODUCTS FROM NES:











MEASUREMENT

METERS, CIRCUIT CARDS, and complete Systems for all types of Measurement Applications.

PROCESS CONTROL

AUTOMATIC TESTING, PROCESS ALARMS, BATCHING, SORTING . . . small & large Systems to fit any need.

DATA ACQUISITION

DATA LOGGERS, RECORDERS, and **CUSTOMIZED SYSTEMS**, for Transmitting, Printing, and storing Data.

COMMUNICATIONS

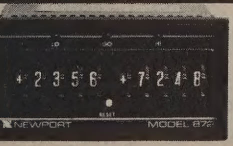
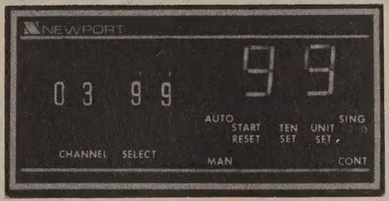
SYSTEM COMPONENTS

MODEL 810 • Digital printer • 9 columns, std.; expandable to 18 • Small size 4½" H. X 8½" W. • Programmable two-color printing • Reliable rotating drum printer • Fixed or floating decimal point • Uses standard adding machine paper • Last line visible without advancing paper • From $495



SERIES 870 • Dual or single limit comparators • Capacity to ±39999 • Hi, Lo, Go lamps on dual comparator • DIN case, 96mm W. X 48mm H. X 130mm D. • Relay output • Compares parallel BCD or binary input data with numbers preset on front panel thumbwheel switches • From $115



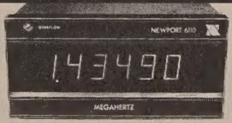
LOW LEVEL SCANNERS

MODEL 850 • Controller for up to 100 channels • Thumbwheel selection of first and last point • Manual, single, and continuous scan modes • Adjustable scan rate up to 10 ch./sec. • 13mm (½ in.) LED ch. I.D. • DIN case (96 W. X 48 H. X 130 D.) mm • From $235

MODEL 851 • 10 channel 2 pole Reed relay card • Low thermal EMF for TC signals • Low pass filter per channel • From $125

MODEL 852 • Low pass filter per channel • 10 channel reed relay card for switching 3-wire RTD's • High level switching up to 200 volts • From $250

TIME & EVENT METERS



MODEL 6110, 6130 • Direct readout of RPM, frequency, time interval, period, period average, totalize and ratio • High noise immunity • Optically-coupled, isolated input with anti-contact bounce circuit • High input sensitivity • Buffered and gated BCD outputs • Beckman or 13mm (½ in.) LED display • From $210

POWER FAIL
RESET
RUN
SET

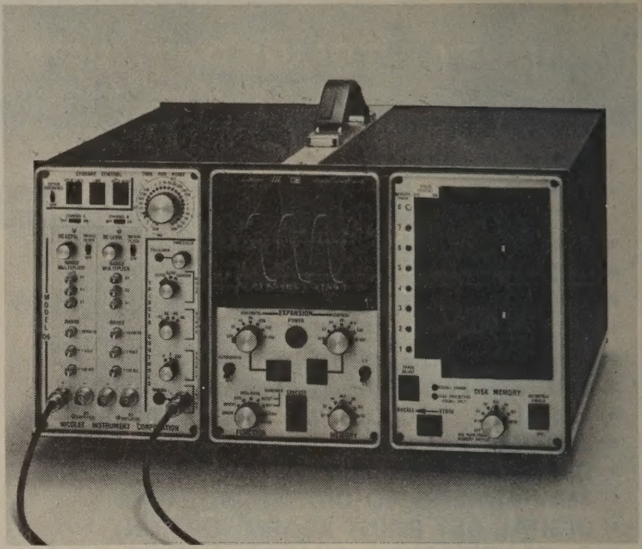
EXPLORER II

For visual observation of waveforms, just as analog oscilloscopes are used. Has order-of-magnitude better accuracy, resolution, and waveform storage. 1 mHz or 10 mHz bandwidth.



EXPLORER III

For visual observations of waveforms, but with internal high capacity additional memory for permanent records. Includes digital I/O for calculator and computer interfacing.

New! General Purpose Oscilloscopes

For low frequency high precision measurements, there is no other general purpose oscilloscope which even approaches the performance, efficiency, and ease of operation of Explorers II and III.

These two new digital oscilloscopes are designed for use in exactly the same applications as analog oscilloscopes, both storage and non-storage. They're equally useful in more advanced applications, too.

What do they do that's better?

- Resolution 0.025% vs 0.4%. Accuracy 0.2% vs 2%.
- Storage at the touch of a button. No adjustments.
- Superimposition of stored and live waveforms.
- Numerical voltage and time values shown for any selected point.
- Easy zoom-in scale magnification, up to x64.
- Non-fading stored waveforms.
- Pre-trigger information, as well as the usual post-trigger information, may be viewed.
- And a great deal more.

Explorer III has a superb additional feature, a built-in magnetic disk recorder which can hold up to 32 waveforms for later recall or for permanent filing. Two seconds to record, two to recall. Recordings may be one at a time, under manual control, or automatically in sequence as the signals occur. Or, one long 32 k point record may be made of slower signals. To make an equivalent recording using a chart recorder, of comparable resolution, would involve a roll of paper 2 meters wide, and 320 meters long.

Explorer III also has digital I/O, for interfacing to the HP9825 calculator, and IEE (HPIB) standard buss.

NIC
NICOLET
INSTRUMENT
CORPORATION
5225 Verona Road Madison, Wisconsin 53711 Telephone: 608/271-3333

Mainframe Specifications (EXPLORER II & III)

Memory:	4096 12 bit words. All 4096 words can be used for one waveform, or two 2048 point waveforms can be stored, or four 1024 point waveforms.
Variable Persistence:	Each waveform is shown, as it occurs. The trace remains until the next signal is received, however long the interval. Depressing one of the two "hold" buttons causes either the last or next signal to be held until the "live" pushbutton is depressed.
Out of Sight Storage:	One or more waveforms can be placed in memory out of sight, for later recall, while the oscilloscope is in use for other purposes in the meantime.
Superimposition of Waveforms:	Two or more stored waveforms can be viewed superimposed for comparison. A stored and live waveform may also be superimposed, or two live waveforms. Zoom-in scale magnification may be used to observe very small difference in all three cases. (Up to x64 magnification.)
Display:	Either YT or XY display may be used.
Numerics:	These show true time and voltage for any selected point, with respect to zero or with respect to any other selected point.
Autocenter:	When in use, expanded displays are automatically centered vertically, and the numbers shown indicate the voltage and time corresponding to screen center.
Pen Recorder Output:	Microprocessor controlled pen recorder drive voltages cause external XY recorders to plot waveform information with constant speed per motion along the waveform, rather than constant horizontal pen speed, for much faster recordings.
Waveform Subtraction:	Two stored waveforms may be subtracted, to produce the difference waveform.
Status Storage:	The oscilloscope operating control settings are recorded with the waveform information to insure that waveforms recalled later will indicate true time and voltages independent of intervening control setting changes.
Power:	85 watts, 115 v ±10% or 230 v± 10%, 48-60 Hz. Specify voltage when ordering.

Weight:	(Explorer II) 32 lbs. Explorer III) 42 lbs.
Size:	(Explorer II) Bench top cabinet 18" long x 11-1/2" wide x 8-3/4" high. (Explorer III) Rack mount cabinet 18" long x 17" wide x 8-3/4" high (not including rack mount ears.)

Explorer III Additional Spec's (mainframe)

Disk Recorder:	Capacity 32 k 12 bit bytes Recording time 2 seconds Recall time 2 seconds Manual or automatic recording sequence Eight individually protectable tracks Disks removable for filing
I/O Buss:	IEEE (HPIB) or 12 line binary.
Interchangeability	Explorer II may be converted at the factory to an Explorer III, at any time within 2 years of purchase.

Plug-in Unit Descriptions

Model 206-1 and 206-2 are one and two channel plug-ins which have 12 bit ADC's. These contain buffer memories which allow observation of pre-trigger signal information. Bandwidths are 1 mHz, with signal measurement rate of 2 mHz (for both signal channels in the case of Model 206-2).

CMRR is 1000:1 dc to 10 kHz, or better, over a range at least 10 times the amplifier signal range selected (up to ±200 v max.) Sample and hold aperture time is ±5 ns or less. Sweep timing is accurate to 0.01%, with sweep start time error of ±25 ns.

These are the most versatile of the 1 mHz plug-on units.

Model 205 is a single input plug-in the same as Model 206-1 except that it contains no buffer memory for observation of pre-trigger signal information.

Model 204-1 and 204-2 are 10 mHz bandwidth plug-ins, one and two channel which have 8 bit ADCs. Sensitivity ranges are ±1 volt to ±200 volts. They include buffer memories for observing pre-trigger information. Sweep speed ranges 50 ns per data point to 20 seconds per point. Amplifiers are single input rather than differential.

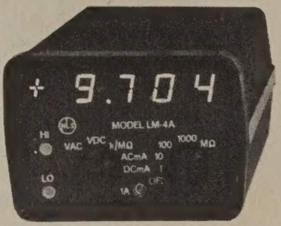
Model 201-1 an1 201-2 will be available in September, 1977. These are low bandwidth (1 kHz), high sensitivity units for measuring slowly changing variables. They have high input impedance, drift stabilized dc amplifiers with 10 μv maximum sensitivity (±20 millivolts full scale, with 0.025% resolution and essentially no dc drift with time and temperature). Excellent for low level transducer signal measurements with sweep durations of up to days in length.

SPANKING NEW VOLKSMETERS!

Now with an internal current measuring function and those astounding new Rollaball switches.

All fitted into the same small case and at the usual low prices.

To add an internal current measuring function (up to 1 ampere) to its line of miniature digital multimeters, NLS developed new miniature Rollaball rotary switches. Rollaball switches are of an unbelievably simple design which makes them extremely wear-free and they exhibit outstanding electrical characteristics. Check the specifications and prices below and then compare prices, performance and the variety of NLS' Digital Multimeters to any DMMs anywhere. Volksmeters have more capability and perform better at lower prices.



NLS' Silver Jubilee Products!

MODEL	RANGES	DC ACCURACY	RESOLUTION	DIGITS	PRICE
LM-3A	VDC, VAC, DCmA & ACmA - 1, 10, 100 & 1000. *100% over-range - 1000 VDC or VRMS AC & 1 A max. OHMS - 1 kΩ, 10 kΩ, 100 kΩ, 1 MΩ & 10 MΩ	±1% Rdg	1 mV	3	$125
LM-3.5A*		±0.5% Rdg	1 mV	3-1/2	$147

LM-4A		±0.03% Rdg	100 µV	4	$227

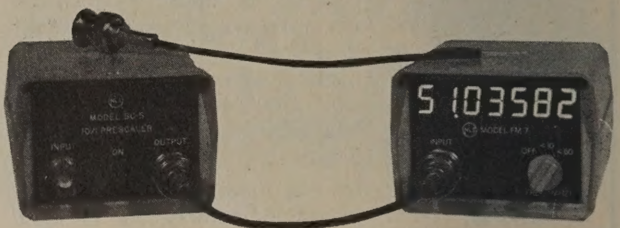
Size: 1.9" H x 2.7" W x 4.0" D   Rechargeable Batteries & Charger Unit Included.

FANTASTIC PERFORMANCE!

FM-7 & SC-5 Frequency Meters measure up to 60 MHz for $195; up to 512 MHz for $89 more. Examine the other great features!

NLS' Silver Jubilee Year

SC-5   FM-7



With Rechargeable Batteries & Charger Unit. **$89**   With Rechargeable Batteries & Charger Unit **$195**

Features Include:

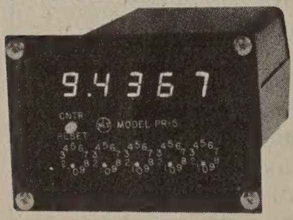
- By using the new NLS SC-5 Prescaler, the range of the FM-7 Frequency Meter, which is 10 Hz to 60 MHz, may be extended to 512 MHz (the upper VHF & UHF frequency bands). ● The FM-7 utilizes an LED readout, providing 7-digit resolution. ● The FM-7 can be calibrated to an accuracy of 0.00001%. ● The SC-5 is accurate to one part per million. ● Each unit has 30 millivolts sensitivity, is battery powered and has a charger unit included. ● Dimensions of each are 1.9" H x 2.7" W x 3.9" D. ● The units may be obtained separately or as a "Frequency Duo."

LOOK AGAIN!!

NLS' Counter specs are amazing and the prices will please you.

NLS' Silver Jubilee Year

PR-5 PRESET COUNTER

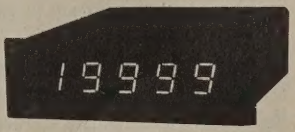


Unit Quantity—$149

Features Include:

- Five-digit LED display of count plus 5-digit preset. ● Counts at 500 kHz pulse and 300 Hz contact closure. ● Small: 2.25" H x 3.25" W x 4.0" D; fits in the palm of your hand. ● Permits multiple presets. ● Optional battery pack for standby operation. ● Solid-state LSI circuitry with high noise immunity.

PC-4 EVENT COUNTER



Unit Quantity—$54.50

Features Include:

- Counts to 19999 events @ up to 200 kHz. ● Programmable decimal. ● TTL or switch input. ● Electronic reset. ● Display inhibit/dimming and lamp test. ● Leading zero suppression capability. ● Multiplexed BCD output. ● Multiple units may be cascaded. ● Large 0.3" LED display. ● Small size: 1" H x 2.5" W x 3.25" D. ● Operates from +5 vdc supply; using less than 0.75 watts. ● Optional 115 vac operation.

TAKE YOUR PICK!!

NLS' DPMs fill every need and the prices are pleasing.

NLS' Silver Jubilee Year

PM SERIES   DC OR AC VOLTS

Features Include:

- Operates from a +5V separate power supply. ● Overload indication. ● Auto zeroing. ● Low power consumption. ● Programmable decimal. ● Protected input. ● Smallest package available anywhere - 1" H x 2.5" W x 3.25" D. ● MOS/LSI construction. ● Large 0.3" LED display. ● Volts dc models have range change capability.

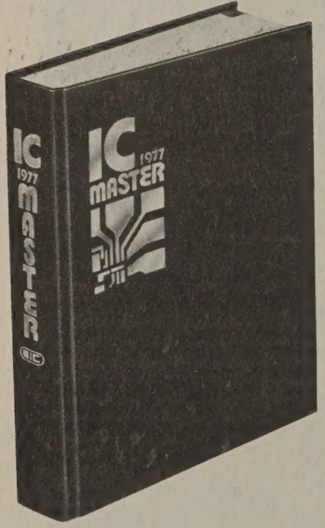
WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

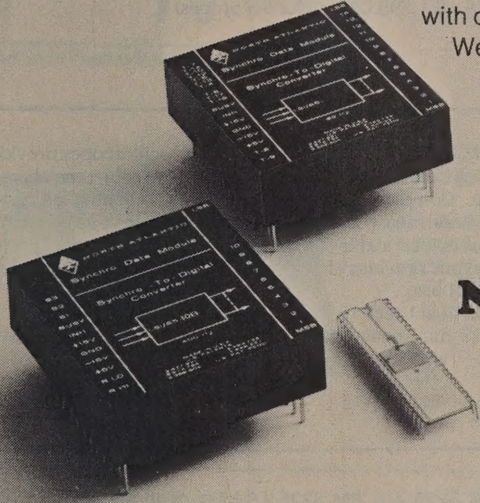
LSI-enhanced data conversion!

If you're into AC Instrumentation or ATE, then you've probably worked with our high-accuracy, high-reliability instrumentation . . . or wanted to! We are the innovators of equipment and modules based on an industry-first usage of LSI that resulted in performance parameters unmatched by competitive products.

All North Atlantic equipment reflects the highest state-of-the-art technology. Each product we produce goes through extensive testing including burn-in at a 100% level.



Now! LSI in Synchro Converter modules!

Founded on our leadership in AC Instrumentation is our innovative line of data conversion modules. Making use of advanced LSI technology, all receive the same, intensive quality-control tests as our instruments including burn-in. If you're into data conversion, your logical next step should be to learn about our LSI-enhanced modules.

NORTH ATLANTIC

200 Terminal Drive, Plainview, New York 11803 • (516) 681-8600

LSI/85 and LSI/90 SYNCHRO TO DIGITAL
LSI-enhanced reliability
10, 12, or 14 bits
3-minute accuracy at 1440°/second
All standard Synchros and Resolvers
Type II Tracking—no velocity lag.

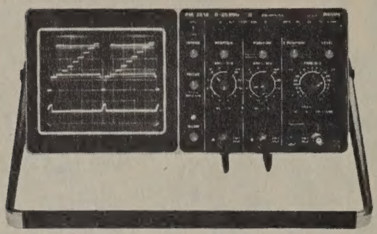
785 DIGITAL TO SYNCHRO
Full 1.25 VA output at 60 and 400Hz
10, 12, or 14 bits
Slew speed 4000°/second
4-minute accuracy under full load
All standard Synchros and Resolvers

MODEL 8300 ANGLE POSITION INDICATOR
.01° Resolution
High reliability with LSI
LAZY EIGHT AMBIGUITY INDICATOR
Programmable for Synchro or Resolver and Line-Line Voltage
2 channel

MODEL 8800 ANGLE POSITION INDICATOR
0.005° accuracy, 5½ digits
High reliability with LSI
Small-size, remotely programmable
Synchro and/or resolver—auto line/line select
2 channel
IEEE Interface (optional) for ATE

MODEL 225 DIGITAL PHASE ANGLE VOLTMETER
High phase and voltage accuracy
Direct and automatic phase angle display
AC ratiometer capability
Autoranging and reference AGC
Remote control and digital output capability
IEEE Interface (optional) for ATE

PHILIPS.. the USER-ORIENTED instrument company

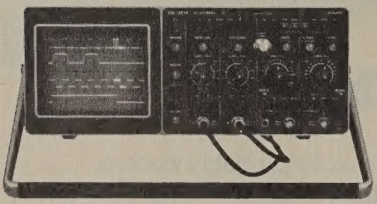


PM 3212 25 MHz Portable Dual Trace Oscilloscope

- **Comprehensive triggering**
- **25 MHz at 2 mV**
- **Double insulation**
- **8 x 10 cm bright 10 kV display**

The Philips PM 3212 is the most versatile instrument in its price range available. Its size, weight and complete functional capability make it an ideal scope for field or lab use. Triggering includes AC, DC, TV, Auto on both channels, and even composite. A 550 KHz chopping rate allows HF signal viewing with no interference. Add mode with Channel B inversion provides A-B capability, with triggering possible on the differential signals.

PM 3212 - $ 1155.00 (including probes)

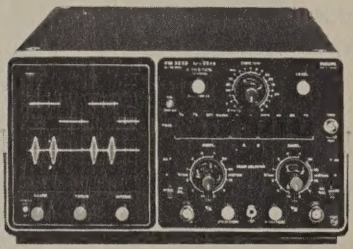


PM 3214 25 MHz Dual Trace Osilloscope with Delayed Time Base

- **Complete triggering on both time bases**
- **25 MHz at 2 mV**
- **Double insulation**
- **8 x 10 cm sharp 10 kV display**
- **Alternate time base display**
- **Battery option (internal)**

The PM 3214 with its complete triggering facilities and delayed time base is the ideal digital service oscilloscope. Alternate time base display allows full viewing of the main time base with intensified zone and complete delayed time base expansion simultaneously for both channels. "User-oriented" front panel design allows quick and efficient measurements to be made without error. Completely separate delayed time base controls allow use of full capability without confusion.

PM 3214 - $ 1,395.00* including probes)



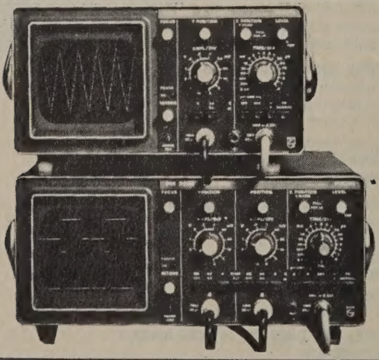
PM 3232 and PM 3233 Dual Beam 10 MHz Oscilloscopes

- **Dual beam operation — no alternate or chopped displays**
- **10 kV 8 x 10 cm display**
- **10 MHz at 2 mV**
- **Comprehensive triggering facilities**

The PM 3232 and PM 3233 dual beam oscilloscopes provide measuring capability with no phase errors as in time shared displays. Complete triggering capability including an auto mode where trigger is derived from peak to peak value of the signal, provides stable displays of all measurements. Front panel layout provides efficient operation, ideal for laboratory and school use.

PM 3232 dual beam 10 MHz oscilloscope - $ 1,015.00

PM 3233 dual beam 10 MHz oscilloscope with delay lines with delay lines - $ 1,085.00



PM 3225 and PM 3226 Single and Dual Trace Oscilloscopes

- **15 MHz at 2 mV**
- **Lightweight, compact portable**
- **Complete triggering facilities**

The PM 3225 and PM 3226 15 MHz oscilloscopes are truly lightweight portables which are designed for use in servicing, production and education. Automatic triggering provides, stable displays under almost any signal conditions. A minimum of controlled use, a maximum of functional capability that is efficient to use due to the functional front panel design. Sturdy, rugged construction leads to reliability under the most demanding conditions.

PM 3225 - 15 MHz single trace oscilloscope - **$545.00**
PM 3226 - dual trace 15 MHz oscilloscope - **$695.00**
PM 3226P - dual trace with A-B capability — **$850.00**

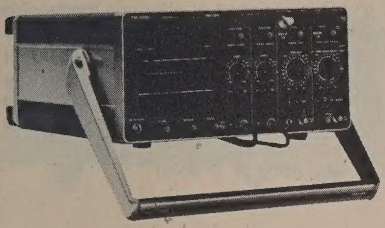
PHILIPS Test & Measuring Instruments

PHILIPS

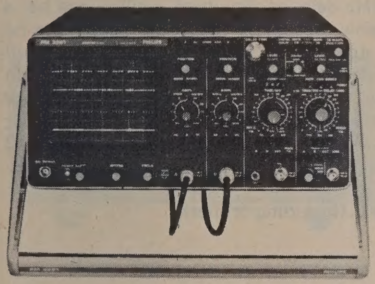
PHILIPS.. the USER-ORIENTED instrument company



PM 3260E Dual Trace 120 MHz Oscilloscope

- Lightweight portable
- Separate delayed time base
- Complete triggering facilities

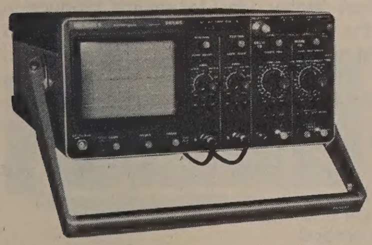
The PM 3260E is a dual trace, 120 MHz portable oscilloscope with delayed time base at 5 mV per cm. At 18.5 lbs. the PM 3260E has a switching regulated supply which will accepted voltage inputs of 100 - 250 V AC (40 - 440 Hz) or DC. Complete triggering facilities for main and delayed time bases. X-Y operation via A or B channels or Inversion of both channels and Add mode for A ± B operation. 20 kV, 8 x 10 cm. CRT for bright displays at low rep rates. Cold switching controls provide logical front panel layout wih separate delayed time base section.
PM 3260E - $ 2,145.00 (including probes)



PM 3261 120 MHz Portable Oscilloscope for Digital Testing

- Digital delay mode
- Special TTL trigger circuits

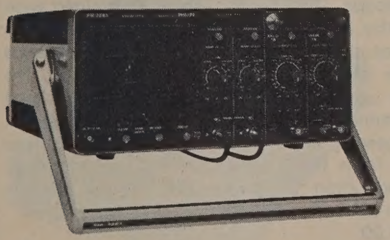
Same basic specs as PM 3260E with the addition of a digital delay counter that can be preset from 1 to 99,999 to start the delayed time base. Delayed time base can be set to start at any preset Nth after main base starts. Trigger selection includes TTL threshold window to insure positive triggering on TTL transitions and not on spurious pulses or noise. The oscilloscope provides a TTL pulse output simultaneous with the delayed timebase. This output can be used along with main time base trigger to measure time from start to end pulse.
PM 3261 - $ 2, 795.00 (including probes)



PM 3265E 150 MHz Portable Oscilloscope

- Alternate time base display
- Cold switching controls
- 2.3 nS risetime

The PM 3265E is a dual trace 150 MHz portable oscilloscope with separate delayed time base control section. Alternate time base display capability allows viewing of time base with intensified zone and full screen delayed time base of both channels simultaneously. "User-oriented" front panel design, enabled by cold switching technique, provides a most efficient use of the instrument. Switching regulated supply provides power input capability from 100 - 250 V AC (40 440 Hz) or DC at total of 45 watts.
PM 3265E - $ 2,895.00 (including probes)



PM 3265 150 MHz Multiplier Oscilloscope

- 150 MHz dual trace
- 100 MHz multiplier (A X B)
- Alternate time base display

The PM 3265 is a 150 MHz dual trace oscilloscope with delayed time base and also features a 100 MHz multiplication capability, Real time power can be displayed for circuit and device analysis. A X B output provided for average instrument with cold switched controls and logical front panel layout. Alternate time base display allows main and delayed time base to be presented simultaneously for both channels. B Channel display is provided in addition to A X B display for reference.
PM 3265 - $ 3,595.00 (including probes)

For technical information, additional data or a complete test and measuring instruments catalog, utilize our toll-free Hotline 800 631-7172 (New Jersey residents call (201) 529-3800 collect) or contact:

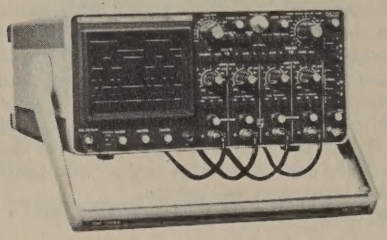
PHILIPS Test & Measuring Instruments

PHILIPS

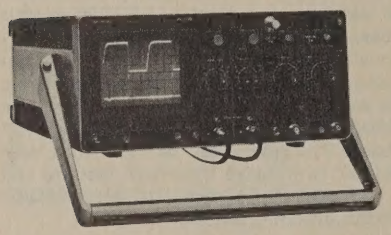
PHILIPS.. the USER-ORIENTED instrument company



PM 3244 4 Trace Portable Oscilloscope

- 50 MHz, delayed time base
- Complete triggering facilities
- Up to 6 traces with A + B and C + D

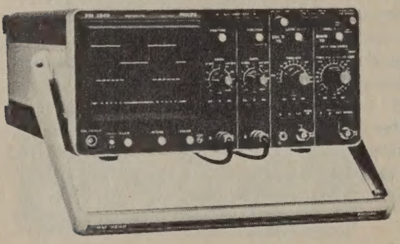
The PM 3244 is a 50 MHz 4 trace portable scope with delayed time base at 5 mV per cm. Displays any combination of channels A, B, C and D in chopped or alternate mode with A ± B and C ± D possibilities. X deflection possible using any selected channel or external input for X —Ya, Yb, Yc, Yd display. Complete triggering facilities including composite trigger, with AC or DC coupling. 8 x 10 cm 10 kV CRT. Cold switching allows all the controls necessary for a 4 trace scope in a portable instrument.
PM 3244 - $ 2,895.00 (including 4 probes)



PM 3243 50 MHz Multiplier/Storage Oscilloscope

- A X B capability to 40 MHz
- Variable persistence and complete storage
- Delayed time base

The PM 3243 50 MHz delayed time base oscilloscope has a 40 MHZ multiplication capability. Real time power can be displayed as well as stored in the variable persistence and full storage mode. A fully comprehensive storage scope with delayed time base and complete triggering facilities makes for a versatile laboratory and field instrument. A X B output provided for additional laboratory measurements. PM 3243 has all the features of the other Philips high frequency portables.
PM 3243 - $ 3,895.00 (including probes)

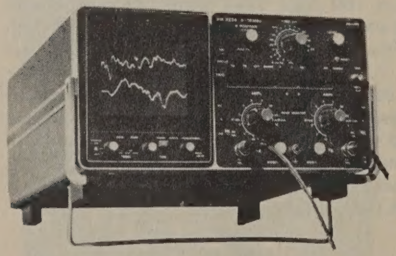


PM 3240, PM 3240X 50 MHz Portable Oscilloscope and TV version

- Seperate delayed time base control section
- 18.5 lbs./ 23 watts
- Complete triggering facilities
- TV line and frame sync

PM 3240 is an ultra lightweight dual time base instrument with a bright 8 x 10 cm display. Ideal for service, production and laboratory use, the PM 3240 has all the features needed for analog and digital measurements. A bright CRT coupled with an efficient front panel design, incorporating comprehensive triggering and display controls make the PM 3240 an ideal field service portable. For television applications, the PM 3240 includes odd/even frame selection as well as line frame synchronization and line/sync and delayed time base.

PM 3240 - 50 MHz dual trace oscilloscope - $ 1,725.00 (including probes)
PM 3240X 50 MHz dual trace TV oscilloscope - $ 1,895.00 (including probes)



PM 3234 10 MHz Dual Beam Storage Scope

- Dual beam operation
- Variable persistence and full storage
- Bright displays with 8.5 kV CRT
- Complete triggering including one shot
- 10 MHz at 2 mV

The PM 3234 is a dual beam operation storage and variable persistence oscilloscope. Dual beam display, combined with the storage facilities, insures true displays and recording including single shot phenomena. Use of variable persistence allows the storage of multiple traces for comparison. No chopping and no alternate display provides total signal storage of both channels even with fast one shot signals. AC, DC and Auto triggering are provided, with Auto position triggering derived from the incoming signal peak to peak value. 24V DC operation is possible as well as AC line voltages, Maximum writing speed is 1 div/mS.
PM 3234 - $ 2,495.00

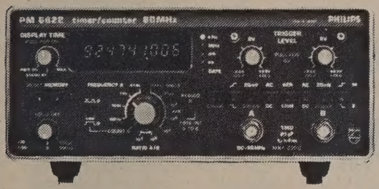
PM 6610 Universal counters

- 5 models to choose from
- Measure frequency, period, ratio, totalize and time interval
- Comprehensive triggering
- Bright, 9-digit gas discharge display

The PM 6610 series is a family of universal frequency counters designed to fulfill a broad range of measurement applications. The PM 6611 provides for frequency, ratio, period average, and totalizing measurements up to 80 MHz and the PM 6612 also permits time interval measurements. The PM 6613, PM 6614 and PM 6615 extend the range of frequency measurements to 250, 520 and 1000 MHz, resp. Options available include internal rechargeable battery pack, digital or analog outputs, rack mounting and either of four time base oscillators.

PM 6611- 80 MHz - $ 750. PM 6612 - 80 MHz - $ 790.
PM 6613 - 250 MHz - $ 875 PM 6614 - 520 MHz - $ 975.
PM 6615 - 1000 MHz - $ 1,175.00



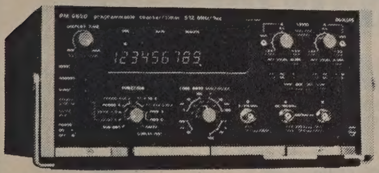
PM 6620 Series Universal Timer/Counters

- Comprehensive Time and Frequency Measurements
- Two 80 MHz Channels with Complete Triggering Controls
- Models Available with Trigger Hold-Off, 520 or 1000 MHz Frequency Range

The PM 6620 series comprises three compact instruments offering time and frequency measurement capabilities. All models provide for measuring (single shot and averaging), time interval, period, frequency, ratio and pulse counting. Two identical 80 MHz input channels are equipped with comprehensive triggering controls and monitoring facilities. The PM 6622 also includes a trigger hold-off control which permits masking unwanted stop pulses such as those generated by contact bounce or ringing. The PM 6624 and PM 6625 extend the range of frequency measurements to 520 or 1,000 MHz respectively.

All of the options available for the PM 6610 series above are also compatible with the PM 6620 series.

PM 6622 - 80 MHz - $ 965. PM 6625 - 1000 MHz - $ 1,565.
PM 6624 - 520 MHz - $ 1,365.



PM 6650 Programmable Timer/Counter

- Complete Time and Frequency Measurement System
- 10 nS Single Shot T.I. Resolution
- Direct Counting to 520 MHz
- GPIB Option
- 1 and 12.6 GHz Sub-Units Available

The PM 6650 is a complete time and frequency measurement system for the lab or systems use. The instrument's basic architecture includes a 100 MHz clock; a 512 MHz RF channel with 62 dB dynamic range; two very fast (1 nS), equalized 160 MHz channels with comprehensive triggering facilities; and a nine-digit gas discharge display. This architecture provides for: frequency measurements to 512 Mhz with 1 Hz resolution in 1 sec.; single shot T.I. measurments with 10 nS resolution; average T.I. measurments with 1 pS resolution; and accurate monitoring of trigger levels for easy pulse parameter measurements. The PM 6650 is available with a plug-in IEEE Bus module which provides for complete control of all instrument functions including trigger level adjustments.

PM 6650B - $ 3,855.00

PM 6664 AUTOMATIC 520MHz COUNTER
PHILIPS
474.499.11
808560.13

PM 6661 80 MHz, PM 6664 520 MHz Automatic Frequency Counters

- Fully Automatic Frequency Measurements
- Automatic PIN Diode Attenuator with 50:1 Range
- 8—digit LED display with leading zero blanking and grouped digits for easy reading.
- Compact, rugged steel housing.
- 98% AM Tolerance

These compact instruments have been designed to provide accurate, easy to read frequency measurements with an absolute minimum of operation attention. Fully automatic operation has been achieved by replacing the usual sensitivity control or attenuator switch by a high effective automatic Pin diode attenuator.

Both models provide 1 Hz resolution up to 80 MHz and the PM 6661 provides 10 Hz resolution between 10 and 520 MHz.

The PM 6661 time base ageing rate is 2 ppm/yr. and temperature stability is 15 ppm, 0 - 50° C. The PM 6664 ageing rate is 0.1 ppm/month and temperature stability is 1ppm, 0 - 50° C.

PM 6661 - 80 MHz - $295.00 PM 6664 - 520 MHz - $ 675.

Digital Memory & I/O Interface... New Dimensions in RF/Microwave Spectrum Analyzers

COMPACT N-R 600 SERIES 100 kHz-40 GHz WITH DIGITAL MEMORY

- **Eliminate annoying flicker— even when highly selective, slow scans are used.**
- **Provide precise on-screen comparisons; dual display of stored and incoming signals.**
- **Plot maximum signal level vs. frequency for any desired time interval.**
- **Have memory I/O interface for remote storage and recall of standard displays.**
- **Also used for signal processing; "talker" and "listener" functions. Adaptable to IEEE 488 Bus.**

New N-R 600 Series Summary		**U.S.A. Prices**	
Model		**Without Memory**	**Including Memory**
632	100 kHz to 2 GHz	$ 5,975	$ 7,075
630	10 MHz to 40 GHz, 7 Bands	$ 7,750	$ 8,850
640	630 plus Internal Preselector	$10,150	$11,250
631	10 MHz to 40 GHz, 6 Bands	$ 7,100	$ 8,200
641	631 plus Internal Preselector	$ 9,500	$10,600

N-R 600 SERIES provide the absolute calibrated analysis features needed for today's stringent applications, at very affordable prices. Select among 5 easy-to-use models. Digital Memory (Option 1) is only one of the N-R 600 SERIES' outstanding design features. Some others include:

- LED frequency readout. Absolute level calibrations.
- Calibrated 0-2 GHz frequency spans.
- Resolution: 300Hz (phase-locked) to 1 MHz BW, auto-tracked or selectable.
- −115 dBm sensitivity, Model 632. To −110 dBm, other Models. Sensitivity conservatively rated @ S+N=2N, 1kHz BW.
- Internal tracked preselector (Models 640 & 641).
- 70 dB Log Scale (10 dB/Div.). Also 2 dB/Div and Linear Scales.
- Parallax-free internal CRT graticule. Scale illumination. Std. camera mount.
- Interface for Tracking Generator (Option 2).
- Compact, portable, all solid-state construction. Models 630, 631 & 632 are 7" high; approx. 40 lbs.

SIGNAL CONDITIONERS

THE SG-11 IS A PLUG-IN MODULE with power supply, balance calibration and monitoring circuits. The power supply circuit offers high temperature and time stability, providing line and load regulation of 0.01%; excitation voltage is adjustable from 0 to 16 volts at 0 to 150 mA. Featured is a self-restoring current limit circuit. All units may be wired for constant-current operation.

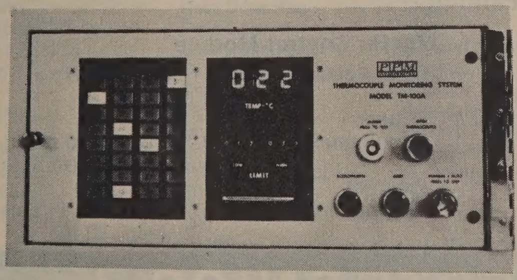
THE SG-11 has very high isolation to line—under 0.03 pF coupling capacitance from power line to DC output—SG-11 performance approximates battery operation.

All controls are 10 turn potentiometers of very high resolution. Calibration is bipolar single shunt.

Two types of enclosures are available: A 19" relay rack that permits the mounting of eight units side-by-side and a portable enclosure accepting a single plug-in unit. A plug-in power supply is also available.

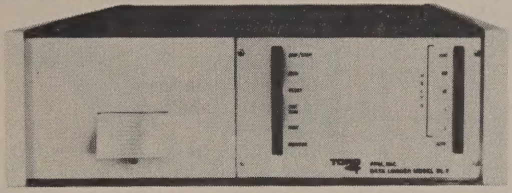
MODEL SG-11 PLUG-IN UNIT (eight shown in rack)	**$187.50**
PORTABLE ENCLOSURE (MODEL SG-11-P as shown)	**$ 39.50**
RELAY-RACK MOUNTING ENCLOSURE (MODEL SG-11-R as shown) with solder terminals only	**$129.00**
RELAY-RACK MOUNTING ENCLOSURE (MODEL SG-11-RC as shown) with MS connectors (mating connectors included)	**$395.00**

THE MODEL SG-16 series (not illustrated) provides lowest-cost strain-gage conditioning. A 20 channel system with common power supply occupies only 5¼ inches of vertical panel space at a total cost of $75 per channel. Amplifier options range from $10 per channel for 10ma galvo drive amplifiers to $100 per channel for low-drift differential amplifiers. Write for Bulletin SG-16.



THERMOCOUPLE MONITOR

THE TM 100A SCANS UP TO 100 THERMOCOUPLES, displaying temperature in digital form. A high-low limit circuit compares temperature with preset thumbwheel switches; a lamp matrix displays all out-of-limit channels. Interface provides for auxiliary printout or computer entry of data.

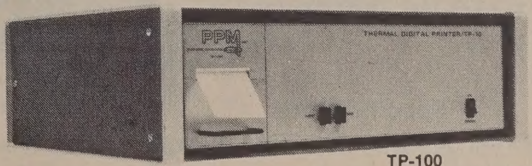


DATA LOGGER

THE MODEL DL-2 IS A COMPLETE DATA ACQUISITION SYSTEM in a compact, portable package. It scans up to 100 differential signals, digitizes them and a thermal printer records their values. Options include floating decimals, internal digital clock, conditioning for thermocouple or strain-gage transducers and punched paper or magnetic tape recording.

Input signals include DC voltage, resistance and frequency. Write for Bulletin DL-2.

Data Logger with 10 Channels	**$2320.00**
Data Logger with 100 Channels	**$3220.00**



TP-100

SILENT THERMAL PRINTER

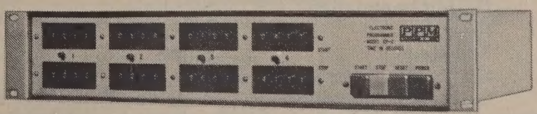
THE TP-100 IS A SILENT, ALPHA-NUMERIC THERMAL PRINTER. It prints up to 20 columns at speeds to 5 lines/second from BCD or ASCII inputs.

This high-performance instrument is simple and compact, with only one moving part. Quiet and reliable operation, long life as well as low cost, result from the use of a simple mechanism whose only function is to advance paper.

A choice of input interface options is available, as well as an internal digital clock or voltmeter. The Model TP-100M is available for O.E.M. applications; it is a plug-in unit with all electronics, but less cabinet and power supply.

Model TP-100, 12 columns, as shown. Unit price.	**$595.00**
Model TP-100M, 12 columns. 100 each.	**200.00**

Write for Bulletin TP-100, or call collect today.



DIGITAL TIMERS-PROGRAMMERS

The EP series of solid-state digital electronic programmers provide relay or solid-state switch operation at digitally-preset start and stop times. Each channel operates independently of all others. Units available from 1 to 1000 channels, with timing from microseconds to hours.

Write for Bulletin EP.

PULSPAK 10A Precision High Voltage Pulse Generator

1 nS Command Jitter • Trigger Input: 2-10 volts

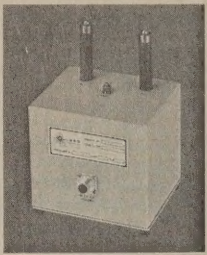
Pulse Output: 10 kV

$2,250

Key Performance Specifications

Output pulse		
	Peak volts	+ 10 kV
	Peak Current	200 Amps
	Output Impedance	50 Ohms
	Risetime (10-90%)	< 10 nS
	Fall-time	150 nS
	Throughput Delay	70 nS or less
	Internal Repetition Rates	1, 5, 10 Hz

External power requirements
115 VAC, 60 Hz at 3 Amps
External dimensions/weight
17" wide, 7" tall and 13" deep, 35 lbs.



TX-40 Pulse Transformer

$330

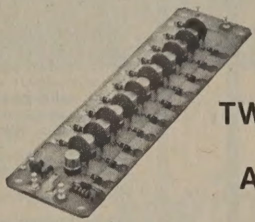
Transform 10 kV to 40 kV

Specifications

(TX-40 driven by PULSPAK 10A)

Input	10 kV, 50 ohms
Output	40 kV, 2000 ohms
Output pulse risetime	30 nS

External dimensions/weight
6" wide, 8¾" tall and 5" deep, 12 lbs.



TWM-1000N Pulse Amplifier

$235

Less than 1 nS Command Jitter
Compact • Versatile

Specifications

Input trigger 1-10 volts
Output pulse (standard is negative)

	50 Ohm Load	1000 Ohm Load
Peak voltage	~ 400 V	~ 1000 V
Risetime	~ 10 nS	~ 5 nS
Decay time	~ 60 nS	~ 1 μS

Supply voltage + 125 VDC, 1.5 mA

SW-50K High Precision Switch

±1 nS Jitter • Compact

$182
(Quantity Discounts Available)

Specifications

Operating range: 10 kV to 50 kV

Jitter: ± 1 nS (when used with PULSPAK 10A)

Lifetime: 10 k shots at 250 millicoulomb/shot and peak current of 50 kA

Gas: Synthetic air (Hydrocarbon free dry air)

Trigger: Pulse risetime<50 nS at 50% charge voltage

Switch Inductance: Depends on circuit application; typically in 100 to 200 nH range

ANVIL L SYSTEM Electrical Isolation in a Precision Pulse Generator

$3,020 - $10,800
(1-8 channels)

Fiber Optic Coupled • 1 nS Risetime into 50 Ohms

Key Performance Specifications

Remote Output Pulser (ANVIL-160)

Peak volts	+ 140 to + 220 V., unit-to-unit variation
Peak current	3.2 Amps
Output impedance	50 ohms
Risetime	≲ 2 nS
Fall-time	55 nS
Single shot jitter	± 0.25 nS
External Dimensions	4" wide, 3" tall and 6" deep

Master Control Module

Input Power	115 VAC, 60 Hz at 2 Amps
Trigger Requirements	2-10 volts, > 40 nS wide pulse, 50 ohms
External dimensions/weight	17" wide, 7" tall and 13" deep, 20 lbs.

Here's why REI can rent you what you want when you want it

Our inventory. It's the biggest in the industry, with over 8,000 items of electronic test equipment in stock and ready to go. And it's getting better all the time, because we add more state-of-the-art equipment every month. This means we can deliver one special instrument . . . or a dozen . . . within hours of the time you place your order.

Now, more than ever, renting makes sense ... to stretch your equipment budget, to fill temporary needs, and to avoid the long delivery lead times associated with purchasing.

And renting helps your financial strength, too. Since you pay only for the time you have your instruments, you'll never have to spend your money on idle equipment.

And renting from REI makes even more sense . . . because we're better equipped to fill your needs than any other rental company.

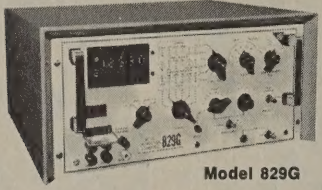
INSTRUMENTATION DIVISION

RFL Since 1922

AC / DC Voltage, Current and Power Standard



Model 829G

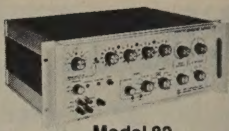
Model 829G	Measure & Deliver
Full-scale ranges	AC/DC Volts 0.01 — 1400 V AC/DC Current 10 $_\mu$A-14A Ohms 0.1-10 meg.
Accuracies of reading	±0.05% DC ±0.08% AC ±0.06%Ohms
AC Frequencies	50, 60, 400, 1000 Hz

Model 5058A

Model 5058A Wattmeter Calibration Module for use with two Model 829G's. For calibration of wattmeters ranging from 0.05 watt to 14,000 watts.

Precision Standard

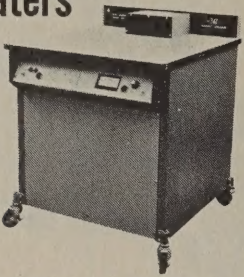
for AC/DC Voltage and Current



Model 82

Tests a wide range of analog and digital meters. AC and Bipolar DC voltage ranges of 100mV, 1V and 10V. AC and Bipolar DC current ranges of 100uA, 1mA, 10mA and 100mA. Nominal accuracies of 0.01% DC and 0.05% AC. Percent error deviation dial. Frequency variable from 40Hz to 1kHz. Four fractional scale division ranges.

Magnet Chargers and Treaters



Model 747

High energy magnet charger covers full range of charging applications, from the lowest to the highest coercive forces, in all configurations. Available in five separate energy-storage capacity levels from 2,000 to 10,000 watt-seconds.

Model 107A

Saturates most medium size and instrument magnets, including core types, using variety of fixtures. Two output ranges: Maximum 18-watt-seconds. Booster unit also available.

Model 1500

Produces 225 watt-seconds for large Alnico meter magnets plus cobalt platinum and barium ferrite materials. Wirewound fixtures plug into front panel through safety interlocks.

Model 2470-350

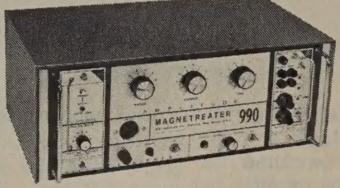
Variable output voltage with energies up to 440 watt-seconds for saturating up to 4 lbs. of Alnico V using wire-wound fixture. Bench or rack mounting available. Accessory Booster available for doubling output.

Model 2470-700R

With variable voltage outputs and energies up to 880 watt-seconds. Will saturate Alnico V up to 5½ pounds, as well as many core-type indicating meters completely assembled and encased. Rack mounting only.

Model 942

Saturate Alnico magnets to 34 lbs. and high coercive force barium ferrite compounds of any shape or number of poles. Outputs to 3,600 watt-seconds. Safety interlocked.



Magnetreater® Model 990

Completely solid-state demagnetizer for stabilization of permanent magnets. Power continuously variable from less than 1 VA to in excess of 80,000 VA. Resolution 0.1%. Can be programmed for automatic or semiautomatic operation.

Magnetreater®/Charger Model 580

Combination Magnet Charger and Magnetreater capable of charging and stabilizing permanent magnet materials and assemblies. Completely solid-state, providing high reliability. Energy storage for the charging mode is 105 watt-seconds; Magnetreater mode is 54 watt-seconds. Can be combined with RFL Gaussmeter for automatic or semiautomatic operation.

Gaussmeters

Model 505

Model 505, a low cost unit ranging from 5 gauss to 50 kilogauss in 7 full-scale ranges. Measures permanent magnet, DC and AC fields to 20 kHz. Built in probe calibration and zero center mode for determining polarity. Accuracy: ±3%.

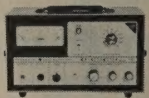
Model 750A, sensitive wide-range device for analog measurement of 0.10 gauss to 50 kilogauss in 18 full-scale ranges. Measures permanent magnetic fields, DC and AC, to 400Hz. Polarity sensitive, self-calibrating. Nominal accuracy ±1%.

Model 750D, sensitive high-range device for digital measurement of 10 gauss to 100 kilogauss in five full-scale ranges. Measures permanent magnetic fields, DC and AC, to 400 Hz. 3½-digit panel meter. Polarity sensitive. Self-calibrating. Nominal accuracy ±0.2%.

Probes — Are InAs elements for temperature stability. Choice of flat, axial or tangential in various sizes to fit most gaps. Flat ranges from .015" thick x .080" wide x .309" long.

Reference Magnets — Traceable to NBS with 50 gauss to 20K gauss fields and gaps from .040" to .343" are standards for probe calibration.

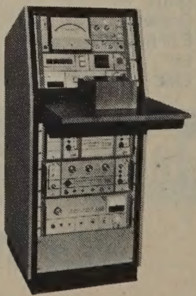
Magnetometer



Model 101

Solid state low level magnetic flux density measurements from 1 gamma to 100,000 gamma (1 oersted). Temperature compensation is provided to enable virtual drift-free operation.

Automagnetic® Systems



A combination of RFL standard magnetizing, measuring and demagnetizing equipment permits interconnection for semi-automatic and completely automatic systems designed for individual requirements. Processing includes TWT, BAR and C shaped magnets, DC meters, Torque motors, accelerometers and other designs embodying permanent magnets.

Crystal Impedance Meters

Model	Module	Frequency Range	Impedance Range
5950	254	2.5 kHz - 4 MHz	10 ohms - 400 K ohms
5950	460	4 MHz - 60 MHz	2 - 75 ohms
1207	n/a	60 - 200 MHz	10 - 125 ohms

Model 5950-254/460 replaces discontinued RFL Models 459B, 531 and 541C.

Reference standards for measuring resonance and anti-resonance of quartz crystals in determination of capacitance, inductance and performance index. Meet U.S. MIL-C-3098E/Amd. 1 and U.K. Defense DEF-5271 A.

New Model 5950 completely solid-state CIM measures semi-automatically. Consists of a main-frame and two interchangeable RF modules covering a frequency range of 2.5kHz to 60MHz.

These state-of-the-art designs all employ some form of *direct* synthesis . . . widely acknowledged to be the most advanced technique in frequency synthesis. By eliminating all of the limitations of the phase-locked-loop technique, Rockland synthesizer designs offer greatly superior performance at very reasonable prices. The newest Rockland synthesizer, the Model 5600, is remarkable in that it provides the superiority of direct synthesis at a price significantly *lower* than phase-locked designs in the same frequency range.

NEW! Model 5600 Programmable Frequency Synthesizer

- Direct Digital Synthesis — No Heterodyning or Phase-Locking
- 0.1 to 160MHz — without Multipliers
- Constant 1Hz Resolution throughout range
- High-Speed Switching — 20μsec
- High Spectral Purity: —70dB Spurious, —35dB Harmonic
- Low Phase Noise: —70dB typical
- Remote-Digital and Front-Panel Programming
- Excellent Temperature Stability: ±1 x 10^{-8}/°C (or ±1 x 10^{-6}/°C optionally) from 0°C to 50°C . . . or use external reference.

Models 5100 and 5110 Frequency Synthesizers

- Direct Digital Synthesis — No Heterodyning, no Phase-Locking
- DC — 2MHz Range. To 3MHz (Option 13)
- 0.001Hz Resolution over entire range
- High Spectral Purity: —70dB Spurious, —55dB Harmonic
- Low Phase Noise: —50dB
- High-Speed Switching: 1.5μsec Programming Delay, 625nsec Update
- No Switching Transients
- Excellent Temperature Stability: ±1 x 10^{-8}/°C (or ±1 x 10^{-6}/°C optionally) from 0°C to 50°C . . . or use external reference.
- Remote and Local Frequency and Amplitude Programming (Model 5110 remote only -- for OEM Systems)

System 51 Programmable Multichannel Frequency Synthesizer System

- Direct Digital Synthesis — No Heterodyning or Phase-Locking
- DC to 3MHz Range — Constant 1Hz Resolution throughout range
- Up to 48 Channels
- Very Fast Switching: 2μsec Programming Delay, 1μsec Update
- Sine and Squarewave Outputs
- No Switching Transients — Amplitude and Phase Continuity Maintained
- High Spectral Purity: —50dB Spurious, —40dB Harmonic
- Low Phase Noise: —50dB
- Excellent Temperature Stability: ±1 x 10^{-6}/°C, from 0°C to 50°C
- Manual/Automatic Programming

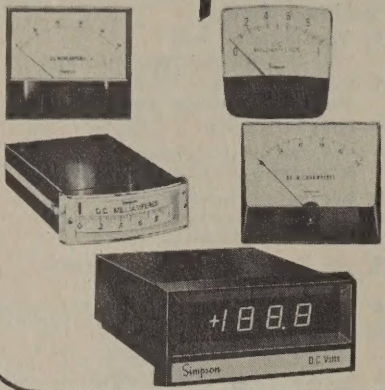
PANEL METERS

If it's a meter — stock or special — analog, digital, Ana-Led® or meter relay, Simpson makes it



STANDARD ANALOG PANEL METERS Industry's Widest Source

Century Series, modern styling in 1½, 2½, 3½ and 4½″ sizes, wide choice of ranges. **Wide-Vue®**, popular style, in 1½, 2½, 3½, 4½ and 8″ sizes, many stock ranges to select from. **Edgewise meters** save precious panel space, available in barrel and stackable models with vertical or horizontal scales, in all standard ranges plus specials. Other panel meter types also available include Bold-Vue®, Designer series, round and rectangular, metal cased. 250° long scale meters provide double the length of standard scales. The famous Simpson self-shielded meter movement provides calibration that is not affected by stray magnetic fields or magnetic mounting. A wide variety of stock DC, AC, RF, DB, wattmeters, percent load, elapsed time, frequency, and segmental ranges are available through worldwide electronics distributors.

DIGITAL PANEL METERS

Highly reliable 3½ digit instruments utilize state-of-the-art LSI circuitry and provide 0.1% of reading accuracy. Designed to fit 1.682″ x 3.622″ cutouts. Adapters are available for other popular domestic and IEC/DIN cutout sizes. Automatic zero and polarity indication. Choice of 120/240 V AC, 50-400 Hz or 5 V DC operation. Input/output edge connector is included.

Low Cost Series 2860 DPM has 0.43″ LED readout.

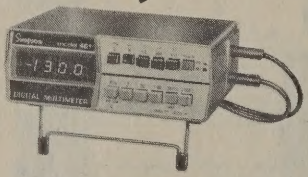
Available in 9 stock DC ranges **$69.00**

Deluxe Series 2850 DPM. Choice of 0.43″ LED or 0.55″ planar gas discharge display. BCD output for computer or recorder interfacing.

Available in 9 stock DC ranges plus specials including AC ranges **$138.00**

Simpson®

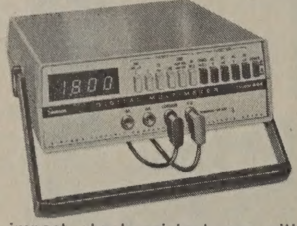
DIGITAL MULTIMETERS



NEW MODEL 461 — DIGITAL MULTIMETER

Compact 2″ x 5.6″ x 4.6″ instrument weighs only 1 lb. 3 oz. 3½ digit, 0.33″ LED readout. ±0.5% accuracy on all DC V ranges. High impact, shock-resistant case with tilt-view adjustable handle. 26 ranges, pushbutton selection: 5 AC and 5 DC current ranges to 2 amps, 6 resistance ranges to 20 M, 5 AC voltage ranges to 600 V, 5 DC voltage ranges to 1000 V. Conforms to ANSI C39.5 requirements. With nickel-cadmium batteries and recharger/adapter.

Model 461, for 120 V AC (50-400 Hz) line and battery operation. Catalog No. 12136	**$130.00**
Model 461, for 230 V AC (50-400 Hz) line and battery operation. Catalog No. 12137	**$130.00**
40 KV High Voltage Probe, Catalog No. 00749	**$36.75**
Carrying Case, Catalog No. 00747	**$19.50**
RF Probe, Catalog No. 00748	**$26.25**
Model 153 AC Amp-Clamp Adapter, Catalog No. 12138	**$29.50**



MODEL 464 PRICE/ PERFORMANCE BREAKTHROUGH

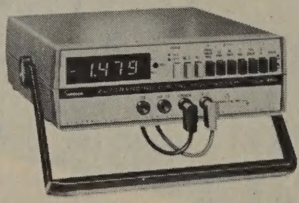
For field or factory, production line, lab or R & D testing and for general electronic/electrical servicing. 3½ digit, 0.43″ LED readout ±0.1% accuracy on DC ranges. High impact, shock-resistant case with tilt-view, adjustable handle. 28 ranges, pushbutton selection: 6 AC and 6 DC current ranges to 10 amps, 6 resistance ranges to 20 MΩ, 5 AC voltages to 600 V, 5 DC voltages to 1000 V. Conforms to ANSI C39.5 requirements.

464A for AC line operation.

For 120 V. Catalog No. 12583	**$210.00**
For 220 V. Catalog No. 12597	**$210.00**
For 240 V. Catalog No. 12595	**$210.00**

464D for AC line or rechargeable battery operation. Batteries not incl.

For 120 V. Catalog No. 12584	**$247.00**
For 220 V. Catalog No. 12598	**$247.00**
For 240 V. Catalog No. 12596	**$247.00**



MODEL 465 AUTORANGING DMM

Automatically selects and displays the proper measuring range. Has bright 3½ digit 0.43″ LED readout. Custom MOS/LSI circuitry provides high 0.1% DC V accuracy. Measures DC voltage to 1000 volts, AC voltage to 600 volts, resistance to 20 megohms, plus low-power ohms ranges, AC/DC current to 10 amps. High-impact shock-resistant case with tilt-view adjustable handle.

465A for AC line operation.

For 120 V. Catalog No. 12561	**$295.00**
For 220 V. Catalog No. 12562	**$295.00**
For 240 V. Catalog No. 12563	**$295.00**

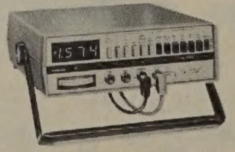
465D for AC line or rechargeable battery operation. Batteries not incl.

For 120 V. Catalog No. 12564	**$332.00**
For 220 V. Catalog No. 12565	**$332.00**
For 240 V. Catalog No. 12566	**$332.00**

MODEL 360-2 DIGITAL VOLT-OHM-MILLIAMMETER

Choice of nickel-cadmium rechargeable battery operation or AC line operation. Large bright 3½ digit 0.43″ LED readout, plus calibrated zero center analog meter for nulling, peaking, scanning trends. Exclusive MOS/LSI circuitry provides compactness with high reliability and low power dissipation. 29 ranges: 7 AC and 7 DC current ranges to 10 amps, 5 DC voltage ranges to 1000 V, 5 AC voltage ranges to 600 V, 6 resistance ranges including 2 low ohms ranges.

360-2, line and battery operation, 120 V AC (50-400 Hz), Catalog No. 12286	**$257.00**
360-2, line and battery operation, 220 V AC (50-400 Hz), Catalog No. 12287	**$257.00**
Carrying Case, Catalog No. 00816	**$26.25**



460-3 DIGITAL MULTIMETER

32 ranges with separate low-power ohms ranges for most measurement application. 3½ digit 0.54″ LED readout. Custom MOS/LSI circuitry gives 0.1% DC V accuracy. Calibrated auxiliary analog display. Measures AC/DC current to 10 amps, AC voltage to 600 V, DC voltage to 1000 V, resistance to 20 megohms. High impact case with tilt-view adjustable handle.

460-3A. for AC line operation.

For 120 V. Catalog No. 12541	**$285.00**
For 220 V. Catalog No. 12546	**$285.00**
For 240 V. Catalog No. 12542	**$285.00**

460-3D for AC line or rechargeable bat. operation. Batteries not incl.

For 120 V. Catalog No. 12543	**$322.00**
For 220 V. Catalog No. 12545	**$322.00**
For 240 V. Catalog No. 12544	**$322.00**

ACCESSORIES FOR 464, 465, 460-3, 360-2

High Voltage Probe, Catalog No. 00432	**$36.75**
Carrying Case, (not for 360-2), Catalog No. 01617	**$26.25**
RF Probe, Catalog No. 00433	**$26.25**
Model 154, AC Amp-Clamp Adapter, Catalog No. 12222	**$29.50**

Simpson® 260 FAMILY OF VOMS

260-6® VOLT-OHM-MILLIAMMETER

Fast, accurate measurements of 27 popular ranges. Direct dial reading of Amp-Clamp ranges. Rugged taut band movement, varistor protected. External access battery and fuse compartment. Multi-purpose test leads with combination probe and alligator clips. Two batteries supplied — 9 V (NEDA 1604) and 1.5 V "D" size (NEDA 13F). Complete with batteries, test leads and manual, Catalog No. 12167 ...... $79.50

260-6P. Circuit overload protected. Reset pushbutton releases when overload exists. Will not reset until overload is eliminated. With batteries, test leads and manual, Catalog No. 12171 .... $119.00

260-6M, with Mirror Scale, Catalog No. 12168 .... $82.50

260-6RT, in Roll Top Case, Catalog No. 12169 .... $89.50

260-6MRT, with Mirror Scale and in Roll Top Case, Catalog No. 12170 .... $92.50

260-6PM, Protected with Mirror Scale, Catalog No. 12175 .... $122.00

260-6PRT, Protected in Roll Top Case, Catalog No. 12172 .... $129.00

Low-Power Ohms Probe, Catalog No. 00735 .... $32.50

Vinyl Ever-Redy Case, Catalog No. 00805 .... $22.65

260-6XL VOLT-OHM-MILLIAMMETER

For the special needs of solid-state electronics. 33 ranges with extra voltage, current, resistance and low-power ohms functions. Extra shock and drop resistant construction. High impact, custom-molded panel and case. Extra large viewing area with color-keyed scales. Plus, all the features of the 260 Series 6. Complete with batteries, test leads and manual, Catalog No. 12177 .... $93.00

260-6XLM, with Mirror Scale, Catalog No. 12186 .... $96.00

260-6XLP Circuit overload protected — same as 260-6XL. With batteries, test leads and manual, Catalog No. 12176 .... $128.00

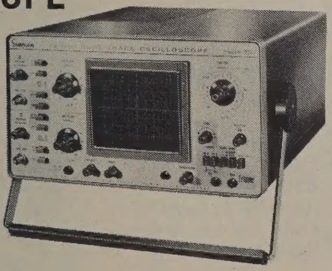
260-6XLPM, Protected with Mirror Scale, Catalog No. 12187 .... $131.00

30 KV Probe, Catalog No. 00509 .... $24.30

Vinyl Ever-Redy Case, Catalog No. 00805 .... $22.65

Simpson® MODEL 452

DUAL TRACE TRIGGERED SWEEP SCOPE



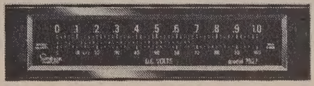
For design, development and service of digital circuitry, communications, audio, TV. Uses reliable integrated circuitry and solid state components. Differential vertical amplifier stages provide DC to 15 MHz bandwidth with smooth rolloff to beyond 27 MHz. Triggering is internal and external with 3 TV sync positions (TVV, TVH, VITS). Trace automatically shifts from Chop to Alternate as you change sweep times. Also 24 nsec rise time, front panel X-Y displays CHA, CHB, A&B, A+B or A−B. 0.5 V P-P 1 KHz square wave calibrator. Voltage calibrated 11-step vertical and horizontal inputs, X5 magnification.

Model 452, for 120 V AC, Catalog No. 12513 .... $635.00

Model 452, for 220-240 V AC, Catalog No. 12515 .... $635.00

Low-Cap. 10-1 Probe, Catalog No. 07548 .... $18.40

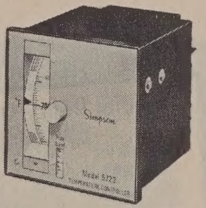
Simpson® ANA-LED

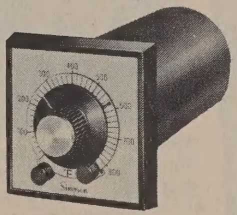


MODEL 7527 SOLID-STATE PANEL METER/CONTROLLER

The best of analog and digital techniques for unique advantages. Choice of "bar" or dot display, through or front panel mounting. Instant response, no moving parts. Extreme resistance to shock and vibration. 5" direct-reading horizontal linear LED scale. Vertical scale available. No pointers, no blinking digits. 15 msec max. response, no overshoot. Set-point modules for on/off limit control and output devices available.

Many variations available $130.05





CONTROLLERS • RECORDERS

Model 5850 Solid State, Non-Indicating Controller provides precision control of voltage, current or temperature. Single or double set-points. Rugged sealed, all metal housing. Solid state circuitry with 10-amp relay output. Wide selection of ranges.

Single Set-Point Models $96.00

Double Set-Point Models $165.00

Model 3623XA Edgewise Controllers. 3½" size, single or double setpoint with removable knobs. Wide variety of ranges. **Model 3323XA Rugged Seal Controllers.** 3½, 4½ and 4 x 6" sizes. Variety of ranges.

Model 2750 Miniature Strip Chart Recorders. Panel mount or portable. 3¾" square. Versatile models for electrical value, event or temperature recording. Wide complete selection of ranges and accessories.

Quantity OEM prices available on request.

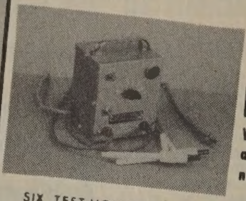
High-voltage Insulation Tester with buzzer signal on breakdowns ...grounds ....shorts

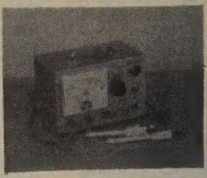


MODEL
101

Watch what you are doing . . . not the tester

SIX TEST VOLTAGES . . 500 to 2500 V.A.C. PRICED SO YOU CAN AFFORD TO SPOT A FEW ALONG YOUR ASSEMBLY LINES.

Adjustable High-voltage Tester with buzzer signal on breakdowns ...grounds ....shorts

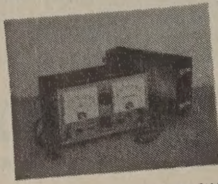


MODEL
106

Voltmeter shows actual Test Voltage

CONTINUOUSLY VARIABLE TEST VOLTAGE RATINGS TO 10,000 VOLTS AC & DC . . RECOMMENDED FOR BREAKDOWN TESTING AT FINAL ASSEMBLY AND INSPECTION

High-voltage Leakage Tester checks insulation for...leakage ...grounds .....arcing

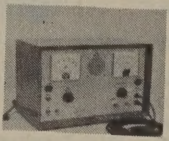


MODEL
122

16 lb. Portable for lab and field work

VARIABLE VOLTAGE RATINGS TO 2.5 KV AC & DC. DUAL RANGE LEAKAGE METER 0/100/1000 μa. . . . CAPACITY COMPENSATION. . . MEASURES INSULATION RESISTANCE, CAPACITY, POWER FACTOR.

High-voltage Leakage Tester audibly signals excess leakage ...grounds .....arcing

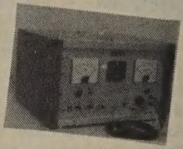


MODEL
103

Measures Leakage . . . not capacity current

TEST VOLTAGE CONTINUOUSLY VARIABLE ADJUSTABLE LEAKAGE LIMIT. . CAPACITY COMPENSATION ON AC TESTS. . . RATINGS TO 10,000 VOLTS AC & DC. . . . LIMITED ENERGY. . NON-DESTRUCTIVE. . . FOR LAB AND PRODUCTION LINE SERVICE. . . . . .

Automatic H-V Insulation Tester for precision checking... breakdowns ...leakage ...grounds

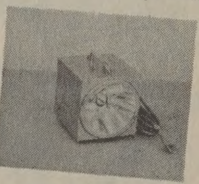


MODEL
103-MP

Automatic Test Cycle

FULLY AUTOMATIC TEST CYCLE. . . CONTROLLED RATE-OF-RISE. . . ADJUSTABLE TEST VOLTAGE, DWELL TIME, & LEAKAGE LIMIT. . . CAPACITY COMPENSATION ON AC TEST. . . FOR PRECISION TEST OF CRITICAL PARTS & ASSEMBLIES. . .

General Utility Stroboscope .....with high intensity daylight lamp



MODEL
168

200/5,000 Flashes per Minute

ECONOMY UNIT FOR MOTION STUDY AND INSPECTION APPLICATIONS . . . HIGH INTENSITY WHITE LIGHT . . . INSTANT STARTING . . . OPERATES FROM INTERNAL OSCILLATOR OR EXTERNAL TRIGGER.

Inspection Stroboscope .....with high intensity daylight lamp

MODEL
161

0/2,000 Flashes per Minute

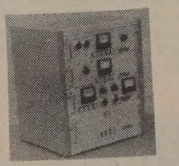
. . . fields



SERIES
720

Test Rates to 1000 Parts per Hour

READY-TO-GO PACKAGE HANDLES 90% OF COILS WINDING TEST APPLICATIONS . . . QUICK CHANGE TEST FIXTURES . . . FULLY AUTOMATIC GO/NO-GO CYCLE.

High Speed Circuit Tester

. . . for accuracy and integrity

SERIES
703

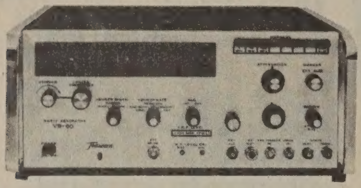
3000 Tests per Minute

SELF PROGRAMMING FOR TESTING UP TO 500 POINTS . . . MICRO PROCESSOR CONTROLLED . . . GO/NO-GO OPERATION DIGITAL READOUT OF FAULT AND LOCATION.

Sweep Generators. Spectrum Analyzers. Oscillator Attenuators. Filters and R.F. Components

INSTRUMENTS

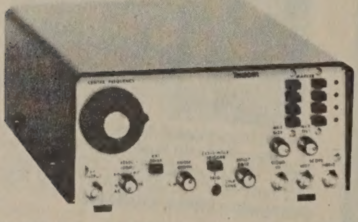
Texscan was incorporated on May 10, 1965 to engage in the design and manufacture of instruments and components for the electronic industry. The original line was limited to only a few of the products presently produced and consisted principally of sweep signal generators, display oscilloscopes and various coaxial and microwave components. Today, Texscan offers a complete line from a single source.



VS SERIES - SWEEP/SIGNAL GENERATORS

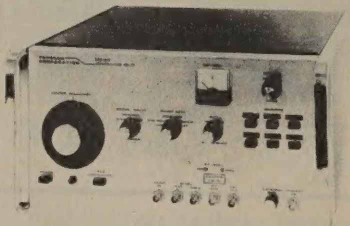
The VS series sweep/signal generators are completely solid state, low distortion, wide sweep instruments containing sufficient features for wide application in the industry. These include variable sweep rate capability, excellent linearity, with attenuated outputs and have extensive marker capability. The unit shown is the VS-60, and its controls are typical. Controls may be deleted or rearranged on other units. This line includes instruments with extensive tuning range.

Model	Frequency Range
VS-20	500 Hz to 25 MHz
VS-30A	300 kHz to 100 MHz
VS-40A	1 MHz to 300 MHz
VS-50A	5 MHz to 500 MHz
VS-60B	5 MHz to 1000 MHz
VS-80	1 MHz to 1200 MHz
VS-80DH	0.5 MHz to 1200 MHz
VS-90B	5 MHz to 2350 MHz
VS-340	3.6 GHz to 4.3 GHz
	5.8 GHz to 6.5 GHz



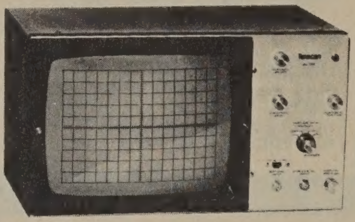
WB SERIES - SWEEP/SIGNAL GENERATORS

The WB series sweep signal generators are designed to make swept measurements at relatively low cost. They cover the frequency range of DC to 960 MHz in four units: DC to 32 MHz, 4 to 400 MHz, 1 to 500 MHz and 1 to 960 MHz. The unit covering 1 to 960 MHz is a two band unit. The bands are 1 to 500 MHz and 450 to 960 MHz. The instruments are less than one-half rack unit width, approximately 4-3/16 inches high and 12-5/8 inches deep.



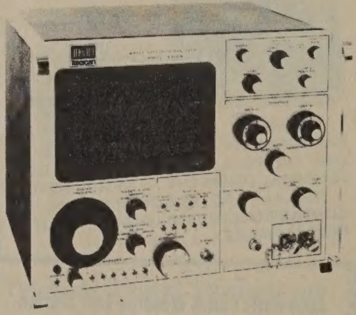
SS SERIES - HIGH POWER SWEEP/SIGNAL GENERATORS - 5 WATTS

The SS series utilizes solid state power amplifier output devices. This combination eliminates the costly replacements previously associated with high power tube-type sweep/signal generators. These units produce 5 watts into 50 Ω and are VSWR protected. Frequency range is 1 to 1000 MHz.

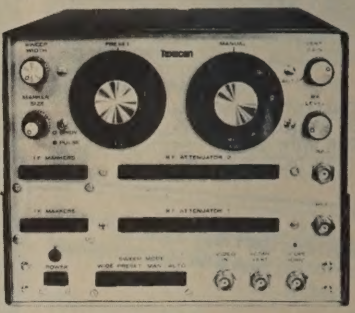


DU SERIES OSCILLOSCOPES

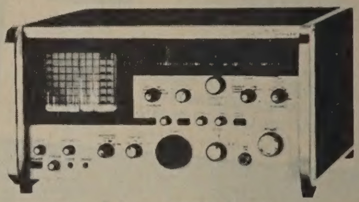
Texscan oscilloscopes are sensitive, large screen, solid state, X-Y display units designed to satisfy the particular needs of a production or laboratory testing system using sweep generator techniques. These display units are complete with cathode ray tube, vertical and horizontal deflection amplifiers, video (Z axis) amplifier, and high and low voltage supplies.



The Model 9650 tracking sweep spectrum analyzer makes possible dynamic measurements of over 100 dB. This technique provides rapid observation of many band pass — band reject responses previously available only on a point-to-point basis. This unique instrument combines the features of a sweep generator, spectrum analyzer, display section, reflection bridge and associated 1 dB step attenuators.



The Ultima 9000 Series and related products mark Texscan's entry into the realm of TV tuner and chassis testing. TV industry sweep instruments are by nature custom designed and the Texscan 9000 Series is fully flexible to meet user requirements.



SPECTRUM ANALYZER AL-60

1 MHz to 3 GHz, solid state, −110 to +30 dBm. Texscan's line of lab spectrum analyzers consists of the AL-60, 1 MHz to 3 GHz. Designed for maximum reliability and maintainability, accurate frequency and amplitude identification.

PORTABLE SPECTRUM ANALYZERS

The AL-50 family of portable spectrum analyzers provides the user with a rugged instrument for making RF measurements both in the lab and in the field. There are three units in the series — the AL-50, single resolution 4-300 MHz, AL-51 selectable resolution and phase lock, 4-1000 MHz, and the AL-55, 4-350 MHz, with crystal markers and special hum modulation measurement circuittry. These units will operate from an internal 12V rechargeable battery, an AC power converter, or 12V vehicular systems. Weighing less than 25 lbs., they are provided with a protective cover and rugged field carrying case with handle.

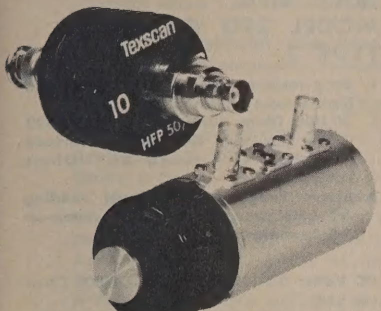
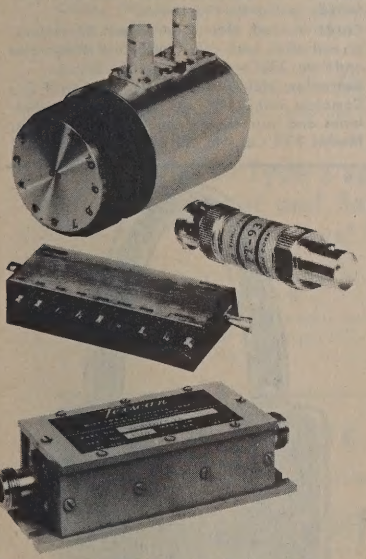
weep Generators. Spectrum Analyzers. Oscillators. Attenuators. Filters and R.F. Components

ATTENUATORS



New High Performance Attenuators — New HFP Series are 10 watt CW fixed attenuators and FP are subminiature with an exacting range from DC — 18 GHz. With a conservative 2 watt rating at room temperature these attenuators are ideal for environmental protection, ruggedness and low cost. The attenuators are also packaged in convienent laboratory protective cases.

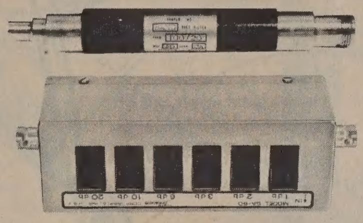


Attenuators — RA Series — Rotary — DC — 4000 MHz, direct reading in dB, 8 attenuation ranges up to 120 dB, 50 to 75 ohm. Texscan offers a complete range of attenuators with steps of 0.1, 1.0 and 10.0 dB, covering attenuation ranges of 1.0, 10.0 and 120.0 dB. Wide selection of connector choices available.

FP Series — Fixed Coaxial — DC — 18 GHz, 2 watt average power, values up to 50 dB.

PA Series — Digitally Programmable — DC — 1250 MHz, 6 millisecond switching speed. Three different units cover 0 — 127 dB in 1.0 dB steps. Each pad represents a single binary digit for easy mating to a digital system.

FILTERS



Filters — Tunable Bandpass — 48 MHz to 4 GHz, 3 dB BW, 1% to 10%, 3 and 5 sections. Any single model covers more than an octave.

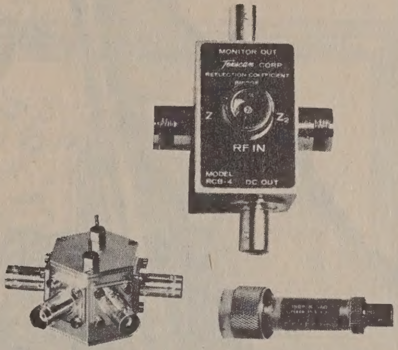
Bandpass/Lowpass — 10 MHz to 13 GHz. Five different types available, each with its own unique characteristics. Choice of connector style as well as special mechanical designs to fit your packaging requirements, 48 hour delivery.

Lumped Component — 5 MHz to 100 MHz, 3 to 8 sections. Miniature size provides freedom in circuit layout, reducing overall package volume. Available in bandpass and lowpass designs.

Cavity Bandpass — 30 MHz to 3000 MHz, 2 to 6 sections, 0.2 to 3%, 3 dB BW. Designed to provide low insertion loss at narrow bandwidths.

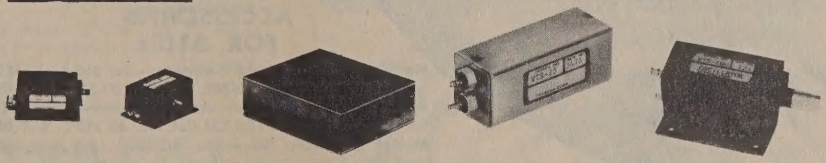
Waveguide — 4 GHz to 18 GHz Bandpass. Custom designs from 0.25 to 10% bandwidths.

COMPONENTS



RF COMPONENTS	FREQUENCY RANGE
Detectors	100 KHz — 4000 MHz
Minimum Loss Pads	DC — 1000 MHz
Reflection Coefficient Bridges	500 KHz — 2.5 GHz
Terminations	DC — 1000 MHz
RF Coax Switches	DC — 2000 MHz
Voltage Monitors	500 KHz — 4 GHz
Mismatches	DC — 2.5 GHz

OSCILLATORS



Solid State Oscillators — Texscan's seven lines of solid state RF sources span between 2.5 MHz to 20 GHz and supply RF power up to one watt. Both electronically and mechanically tuned devices are available.

BITE Oscillators — Texscan's PMO series operate with TTL logic pulses at a .001 duty. They require a 20 mW input for a 200 mW peak RF output making them ideal for battery operation. The PMO series is also available with a direct pulse drive input.

SOLID STATE OSCILLATORS

Frequency Range	Series	Tuning	Tuning Range	Power Range
2.5 MHz - 2 GHz	VTS	Elect.	Up to an octave	200 - 1000 mW
1 GHz - 8 GHz	VTO	Elect.	Up to an octave	20 - 150 mW
10 MHz - 4 GHz	MTO	Mech.	Up to an octave	10 - 1000 mW
4 GHz - 20 GHz	GTO	Mech.	Up to 65%	5 - 1000 mW
4 GHz - 18 GHz	ETO	Elect.	Up to 2500 MHz	10 - 100 mW
32 MHz - 1 GHz	LTO	Elect.	Up to 3 octaves	
VHF - 18 GHz	PMO	Mech.	Up to an octave	0.1 - 500 mW Peak

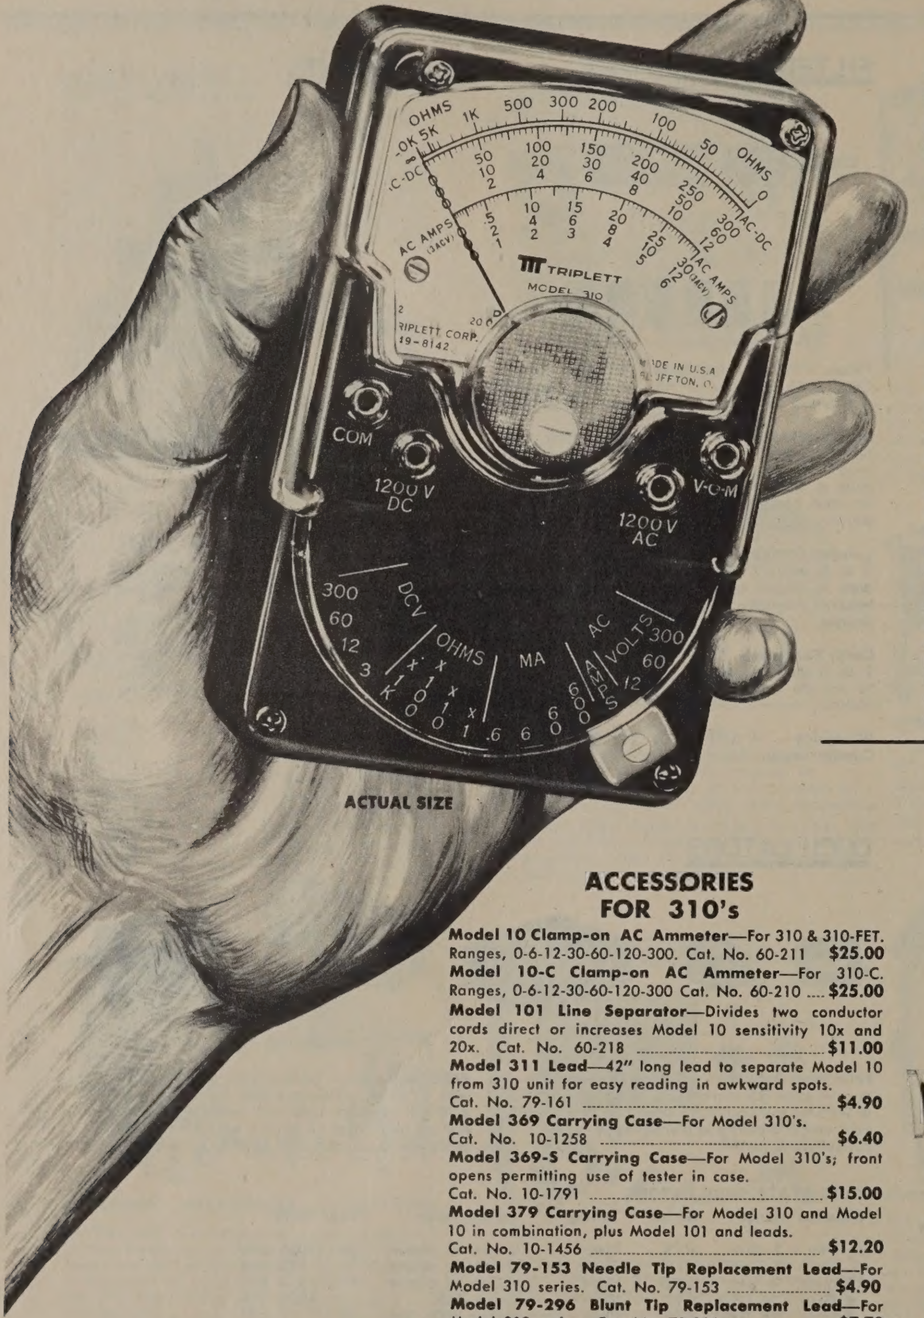
GENERAL MULTI-PURPOSE V-O-Ms



ACTUAL SIZE

DROP RESISTANT
Hand Size MODEL 310 V-O-M TYPE 3

1. **Drop-resistant, hand-size V-O-M with high-impact thermoplastic case.**
2. **20,000 Ohms per volt DC and 5,000 Ohms per volt AC; diode overload protection with fused Rx1 Ohms range.**
3. **Single range switch; direct reading AC Amp range to facilitate clamp-on AC Ammeter usage.**

RANGES

DC Volts: 0-3-12-60-300,1,200 (20,000 Ohms per Volt).
AC Volts: 0-3-12-60-300-1,200 (5,000 Ohms per Volt).
Ohms: 0-20k-200k-2MΩ-20MΩ (200 Ohm center scale on low range).
DC Microamperes: 0-600 at 250 mV.
DC Milliamperes: 0-6-60-600 at 250 mV.
Accuracy: ±3% DC; ±4% AC; (full scale).
Scale Length: 2⅛″.
Meter: Self-shielded; diode overload protected; spring backed jewels.
Case: Molded, black, high impact thermoplastic with slide latch cover for access to batteries and fuse, 2¾″ w x $1\frac{5}{16}$″ d x 4¼″ h.
Batteries: NEDA 15V 220 (1), 1½V 910F (1): Complete with 42″ leads, alligator clips, batteries and instruction manual. Shpg. Wt. 2 lbs.
Model 310 Cat. No. 3018 .... **$53.00**

ACCESSORIES FOR 310's

Model 10 Clamp-on AC Ammeter—For 310 & 310-FET. Ranges, 0-6-12-30-60-120-300. Cat. No. 60-211 **$25.00**

Model 10-C Clamp-on AC Ammeter—For 310-C. Ranges, 0-6-12-30-60-120-300 Cat. No. 60-210 .... **$25.00**

Model 101 Line Separator—Divides two conductor cords direct or increases Model 10 sensitivity 10x and 20x. Cat. No. 60-218 .... **$11.00**

Model 311 Lead—42″ long lead to separate Model 10 from 310 unit for easy reading in awkward spots. Cat. No. 79-161 .... **$4.90**

Model 369 Carrying Case—For Model 310's. Cat. No. 10-1258 .... **$6.40**

Model 369-S Carrying Case—For Model 310's; front opens permitting use of tester in case. Cat. No. 10-1791 .... **$15.00**

Model 379 Carrying Case—For Model 310 and Model 10 in combination, plus Model 101 and leads. Cat. No. 10-1456 .... **$12.20**

Model 79-153 Needle Tip Replacement Lead—For Model 310 series. Cat. No. 79-153 .... **$4.90**

Model 79-296 Blunt Tip Replacement Lead—For Model 310 series. Cat. No. 79-296 .... **$7.70**

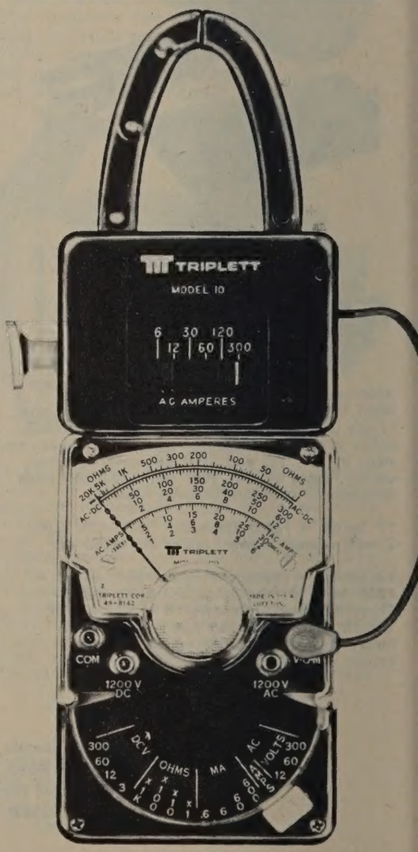
HAND SIZE V-O-M CLAMP-ON AMMETERS
MODEL 100 WITH TYPE 3 MODEL 310

1. **Complete maintenance kit with V-O-M and clamp-on AC ammeter.**
2. **Diode overload-protected; 20,000 Ohms per volt on DC.**
3. **AC clamp-on will read up to 300 Amps AC.**

Model 100—Complete set includes Model 310 Type 3, Model 10, Model 101, No. 311 lead and Model 379 case. Shpg. Wt. 7 lbs. Cat. No. 3014 .... **$101.00**

Model 100-C—Complete set includes Model 310-C, Model 10-C, Model 101, No. 311 lead and Model 379 case. Shpg. Wt. 7 lbs. Cat. No. 3010 .... **$115.00**

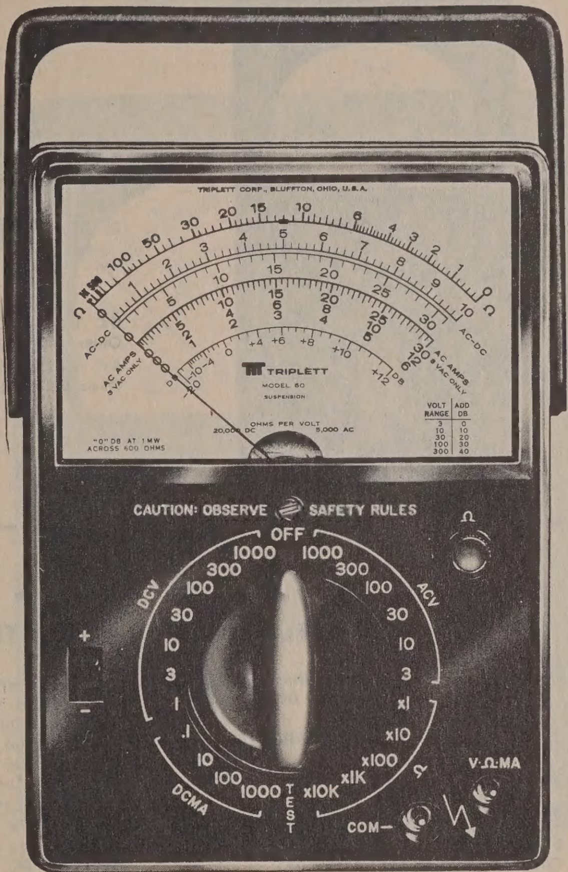
Model 100-FET—Complete set includes Model 310-FET, Model 10, Model 101, No. 311 lead and Model 379 case. Shpg. Wt. 7 lbs. Cat. No. 3013 .... **$134.00**



MODEL 100

X'TRA RUGGED, OVERLOAD PROTECTED, SAFETY DESIGNED

MODEL 60 V-O-M TYPE 2



1. **X'TRA RUGGED—Will withstand an accidental drop up to a five foot height.**
2. **OVERLOAD PROTECTED—All ranges protected by diode and unusual three fuse arrangement, including ⅛ amp, 1 amp and 2 amp/1000V fuses.**
3. **SAFETY DESIGNED FOR YOU—Designed to most rigid safety standards; completely insulated unit including newly designed safety leads.**

RANGES

DC Volts: 0-0.3-1-3-10-30-100-300-1000 (Approx. 20,000 Ohms per Volt).
AC Volts: 0-3-10-30-100-300-1000 (Approx. 5,000 Ohms per Volt).
Ohms: 0-1k-10k-100k-1MΩ-10MΩ (12 Ohms center scale on low range).
DC Microamperes: 0-100 at approx. 320mV.
DC Milliammeters: 0-10-100-1000 at approx. 320mV.
Decibels: −20 to +52 ("0"db at 1mW on 600 Ohm line).
Accuracy: ±2% DC; ±3% AC; (full scale).
Scale Length: 4½".
X'TRA Rugged—Will withstand an accidental drop up to a five foot height with deviation from stated accuracy not exceeding ±4%.
Overload Protected—All ranges protected by diodes and unusual three fuse arrangement, including ⅛ amp, 1 amp and 2 amp/1000V fuses.
Safety Designed to most rigid safety standards to prevent explosive arcs in high energy circuits, up to the 2 amp/1000V (20kW) fuse capacity.
Meter: Diode overload protected ruggedized suspension movement, easily replaced integral module, DC polarity reversing switch.
Confidence test: Reassurance check of instrument meter.
Case: Molded, International Safety Orange, high impact thermoplastic; easy external access to sealed battery and fuse compartment; molded plastic handle will hold tester at 30° angle; 5¼" W X 7½" H X 3¼" D.
Batteries: NEDA 9V 1604 (1), 1½V 13F (1).
Complete with 48" safety test leads, insulated alligator clips, batteries, spare 1/8A and 1A fuses and instruction manual. Shpg. wt. 4 lbs.
Model 60 Cat. No. 3145 .... **$99.00**

Model 60 Type 2 approved by Mining Enforcement and Safety Administration Approval 2G-2880.

Model 60-A, similar to Model 60 with mirror scale and ±1½% DC accuracy. Cat. No. 3148 .... **$106.00**

Model 60-K, includes complete Model 60, Model 10 Clamp-on AC Ammeter, Model 101 Line Separator, Model 10 attachment lead and leather case. Cat. No. 3150 .... **$162.00**

MODEL 310-C V-O-M TYPE 3

1. **Hand-size V-O-M with diode overload-protected suspension movement.**
2. **20,000 Ohms per volt DC and 15,000 Ohms per volt AC.**
3. **Single, enclosed range switch minimizes error; DC polarity-reversing switch.**

RANGES

DC Volts: 0-3-12-60-300-600 (20,000 Ohms per Volt).

AC Volts: 0-3-12-60-300-600 (15,000 Ohms per Volt).

Ohms: 0-20k-200k-2MΩ-20MΩ (200 Ohm center scale on low range).

DC Microamperes: 0-600 at 250 mV.

DC Milliamperes: 0-6-60-600 at 250 mV.

Accuracy: ±3% DC; ±4% AC; (full scale).

Scale Length: 2⅛".

Meter: Self-shielded, diode overload protected suspension movement; DC polarity-reversing switch; single, enclosed range switch.

Case: Molded black, 2¾" w X 1$\frac{5}{16}$" d X 4¼" h.

Batteries: NEDA 15V 220 (1), 1½V 910F (1).

Complete with 42" leads, alligator clips, batteries and instruction manual. Shpg. Wt. 2 lbs.

Model 310-C Cat. No. 3022 .... **$68.00**

MODEL 100-T MAINTENANCE KIT

1. **Complete maintenance kit—Drop-Resistant hand-size V-O-M with two temperature ranges and clamp-on AC Ammeter.**
2. **High-impact thermoplastic case; 20,000 ohms per Volt DC and 5,000 Ohm per Volt AC; diode overload protection with fused Rx1 Ohms range.**
3. **Single range switch; direct reading AC Amp range facilitates clamp-on AC Ammeter usage, reads to 300 Amps AC.**

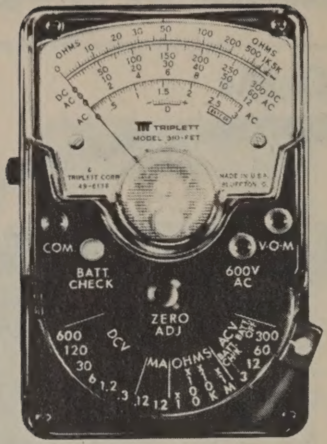
RANGES

DC Volts: 0-3-12-60-300, 1,200 (20,000 Ohms per Volt).
AC Volts: 0-3-12-60-300-1,200 (5,000 Ohms per Volt).
Ohms: 0-20k-200k-2MΩ-20MΩ (200 Ohm center scale on low range).
DC Microamperes: 0-600 at 250 mV.
DC Milliamperes: 0-6-60-600 at 250 mV.
Temperature: −50°F to +150°F
+50°F to +300°F
Accuracy: ±3% DC; ±4% AC; ±3% temperature; (full scale).
Scale Length: 2⅛".
Meter: Self-shielded; diode overload protected; spring backed jewels.
Case: Molded, black, high impact thermoplastic with slide latch cover for access to batteries and fuse, 2¾"w x 1 5/16"d x 4¼"h.
Batteries: NEDA 15V 220 (1), 1½V 910F (1):
Complete with 42" leads, 31" temperature probe, alligator clips, batteries and instruction manual. Shpg. Wt. 2 lbs.
Model 390 .... **$74.00**

Model 10 Clamp-on AC Ammeter—For 390. Ranges, 0-6-12-30-60-120-300. Cat. No. 60-211 .... **$25.00**
Model 101 Line Separator—Divides two conductor cords direct or increases Model 10 sensitivity 10x and 20x. Cat. No. 60-218 .... **$11.00**
Model 311 Lead—42" long lead to separate Model 10 from 390 unit for easy reading in awkward spots. Cat. No. 79-161 **$4.70**
Temperature Probe—31" long lead, interchangeable, curve matched thermistor with removable protective sleeve.
Cat. No. 79-386 .... **$18.90**
Model 379 Carrying Case—For Model 390 and Model 10 in combination, plus Model 101 and leads. Cat. No. 10-1456 ...... **$12.20**

Complete with above items, 42" leads, alligator clips and batteries for Model 390 and instruction manual. Weight approx. 2 lbs. complete.
Model 100-T. Cat. No. 3011 .... **$120.00**

HANDSIZE FET V-O-M



MODEL 310-FET—TYPE 1

1. **Hand-size FET V-O-M with 10 megohm DC input resistance and diode overload-protected suspension movement.**
2. **Low voltage range of 300 mV DC; X1 megohm range.**
3. **Single range switch; DC polarity-reversing switch.**

RANGES

DC Volts: 0-0.3-1.2-6-30-120-600. Input resistance 10 megohms.

AC Volts: 0-3-12-60-300-600 (5,000 Ohms per Volt).

Ohms: 0-5k-500k-50MΩ-5,000MΩ (50 Ohm center scale on low range).

DC Milliamperes: 0-0.12-1.2 at 300 mV.

Accuracy: ±3% DC; ±4% AC; (full scale).

Scale Length: 2⅛".

Meter: Self-shielded, diode overload protected suspension movement; DC polarity-reversing switch.

Case: Molded, black, 2¾" w X 1$\frac{5}{16}$" d X 4¼" h.

Batteries: NEDA 7V 1501M (1), 1½V 910A (1).

Complete with 42" leads, alligator clips, batteries and instruction manual. Shpg. Wt. 2 lbs.

Model 310-FET Cat. No. 3027 ....**$88.00**

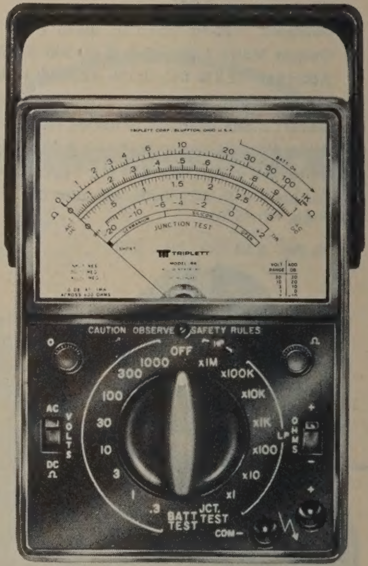
Model 100-FET Cat. No. 3013 ......**$134.00**

See Page 2 for additional 310 accessories.

FET VOLT-OHMMETER WITH LOW POWER OHMS

MODEL 64

1. **X'TRA RUGGED/OVERLOAD PROTECTED (all ranges)/SAFETY DESIGNED solid state Volt-Ohmmeter.**
2. **LOW-POWER OHMS—LPΩ™—6 ranges with 90mV power source for in-circuit measurements plus junction test circuit.**
3. **EXCLUSIVE TRIPLETT MICRO POWER—TMP™—permits continuous operation with carbon battery life in excess of a year.**



RANGES

DC Volts: 0-0.3-1-3-10-30-100-300-1,000. Input resistance 11.12 megohms all ranges.

AC Volts: 0-0.3-1-3-10-30-100-300-1,000. Input impedence 10 megohms all ranges. Frequency range 20Hz to 20kHz, except 300 and 1000V.

Ohms—Low Power: 0-1k-10k-100k-1MΩ-10MΩ-100MΩ. (Max. voltage 90mV, Max. power 0.8mW, 10 Ohm center scale on low range).

Ohms—Conventional: 1000MΩ. (Max. voltage 0.9V, Max. power 0.08μW, 10M ohm center scale).

Junction Test: Checks diodes and transistor junctions (silicon-germanium-open or shorted); forward and reverse conduction. (Max. voltage 0.9V, Max. power 0.8mW).

Decibels: −40dB to +62dB.

Accuracy: ±3% all ranges (full scale).

Scale Length: 4½".

X'TRA Rugged: Will withstand an accidental drop up to a five foot height with deviation from stated accuracy not exceeding ±4%.

Overload Protected: All ranges protected by diodes and unusual two fuse arrangement, including 1 amp and 2 amp/1000V fuses.

Safety Designed to most rigid safety standards to prevent explosive arcs in high energy circuits, up to the 2 amp/1000V (20kW) fuse capacity.

Meter: Diode overload protected, ruggedized suspension meter movement module; "+ jack" polarity reversing switch.

Case: Molded, green high impact thermoplastic; easy external access to sealed battery and fuse compartment; molded plastic handle will hold tester at 30° angle; 5¼"W x 7½"H x 3¼"D.

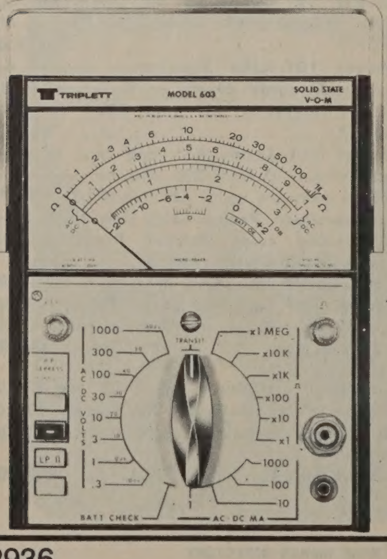
Batteries: NEDA 9V 1604 (2), 1½V 13F (1).

Complete with 48" safety test leads, insulated alligator clips, batteries, spare 1A fuse and instruction manual. Shpg. wt. 4 lbs.

Model 64 Cat. No. 3152 ....**$136.00**

FET V-O-M WITH LOW POWER OHMS

MODEL 603—TYPE 1



1. **Exclusive TRIPLETT MICRO POWER—TMP™ provides battery life in excess of a year for carbon batteries with unit left ON continuously.**
2. **LOW-POWER OHMS—LPΩ™—6 ranges with 70 mV power source for in-circuit measurements without component damage.**
3. **FET V-O-M WITH AUTO-POLARITY—convenient and time saving, always reads up scale.**

RANGES

DC Volts: 0-0.3-1-3-10-30-100-300-1,000. Input resistance 11.12 megohms with 1.12 Meg in Probe.

AC Volts: 0-0.3-1-3-10-30-100-300-1,000. Input impedance 10 megohms. Frequency range 20 Hz to 10 kHz.

Ohms—Low Power: 0-1k-10k-100k-1MΩ-10MΩ-1000MΩ. (70 mV open circuit voltage, 123 μW maximum power applied to device under test, 10 Ohm center scale on low range).

Ohms—Conventional: 0-1k-10k-100k-1MΩ-10MΩ-1000MΩ. (1.5V open circuit voltage, 56 mW maximum power applied to device under test, 10 Ohm center scale on low range).

AC and DC Milliamperes: 0-1-10-100-1000 at 316 mV.

Decibels: −30 to +62 ("0" dB is equal to .776V).

Accuracy: ±3% all Voltage and Ohms ranges, ±4% all Current ranges; (full scale).

Scale Length: 4⅛".

Meter: Diode overload protected suspension movement.

Case: Shielded, molded, black, 5⅛" w X $3\frac{3}{16}$" d X 6½" h.

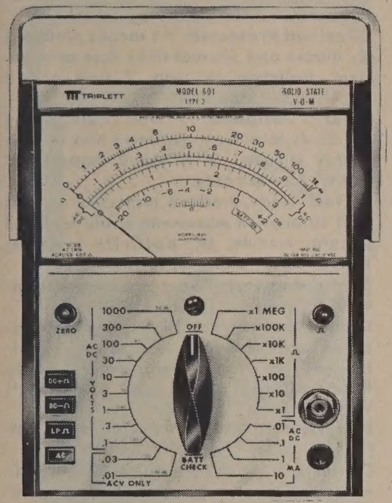
Batteries: NEDA 9V 1604 (2), 1½V 13F (1).

Complete with 48" leads, alligator clips, batteries and instruction manual. Shpg. Wt. 5 lbs.

Model 603 Cat. No. 3037 ....**$173.00**

FET V-O-M WITH LOW POWER OHMS

MODEL 601—TYPE 2



1. **LOW-POWER OHMS—LPΩ™—7 ranges with 75 mV power source.**
2. **High sensitivity—10 mV AC full scale at 10 megohm input impedance; 100 mV DC at 11 megohm input resistance.**
3. **Simplified scale—only 4 arcs for all 53 ranges.**

RANGES

DC Volts: 0-0.1-0.3-1-3-10-30-100-300-1,000. Input resistance 11 megohms with 690k series resistor in probe tip. Includes 40 dB 60 Hz rejection.

AC Volts: 0-0.01-0.03-0.1-0.3-1-3-10-30-100-300-1,000. Input impedance 10 megohms. Frequency range 50 Hz to 50 kHz. Capacitance at input jack 60 mm fd max.

Ohms—Low-power: 0-1k-10k-100k-1MΩ-10MΩ-100MΩ-1,000MΩ (75 Mv open circuit voltage, 100 μW maximum power applied to device under test, 10 Ohm center scale on low range).

Ohms—Conventional: 0-1k-10k-100k-1MΩ-10MΩ-100MΩ-1,000MΩ (1.5V open circuit voltage, 56 mW maximum power applied to device under test, 10 Ohm center scale on low range).

AC and DC Milliamperes: 0-0.01-0.1-1-10 at 100 mV.

Decibels: −60 to +62 ("0" dB is equal to .775V).

Accuracy: DC ±2% Voltage, ±3% Current; AC ±3% Voltage, ±4% Current; full scale).

Scale Length: 4⅛″.

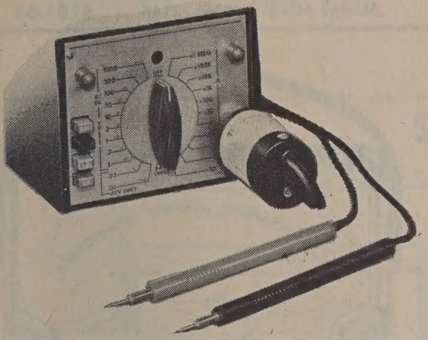
Meter: Diode overload protected suspension movement.

Case: Shielded, molded, black, 5⅛″ w X 3 3/16″ d X 6½″ h.

Batteries: NEDA 1½V 15A (10).

Complete with 48″ leads, alligator clips, batteries and instruction manual. Shpg. Wt. 5 lbs.

Model 601 Cat. No. 3033 .... **$215.00**



AC CURRENT LEAKAGE ADAPTER

Adapter used with new or existing Model 601 V-O-M's for testing appliances, motors, hand tools, industrial equipment and machines, etc. for AC current leakage. Meets proposed ANSI Standard C101.1 for commercial appliance AC Current Leakage tests.

Leakage Readings: 7 ranges, 10 μA f.s. to 30 mA f.s.

Resolution: .2 μA on lowest V-O-M range.

Accuracy: ±4% of full scale.

Frequency Response: Approximates the C.F. Dalziel's "50 Percentile threshold of Perception Curve, within ± 1.0 dB".

Input Impedance: 1500 Ω test load.

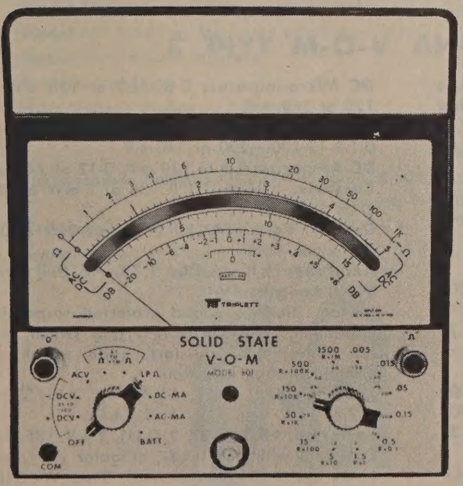
Leakage Adapter for Model 601
Cat. No. 60-407 .... **$34.30**

FET V-O-M WITH LOW POWER OHMS

MODEL 801—TYPE 2

1. **LOW-POWER OHMS—LPΩ™—8 ranges with 35 mV power source and 1 Ohm center scale.**
2. **High sensitivity—5 mV AC full scale at 10 megohm input impedance; 50 mV DC at 11 megohm input resistance.**
3. **Simplified scale—8″ meter with only 4 arcs for all 73 ranges.**

RANGES



DC Volts: 0-0.05-0.15-0.5-1.5-5-15-50-150-500-1,500. Input resistance 11 megohms with 1 megohm series resistor in probe tip. Includes 40 dB 60 Hz rejection.

AC Volts: 0-0.005-0.015-0.05-0.15-0.5-1.5-5-15-50-150-500-1,500. Input impedance 10 megohms. Frequency range 50 Hz to 50 kHz. Capacitance at input jack 60 mm fd max.

Ohms—Low-power: 0-100-1k-10k-100k-1MΩ-10MΩ-100MΩ-1,000MΩ (35 mV open circuit voltage, 35 μW maximum power applied to device under test, and 1 Ohm center scale on low range).

Ohms—Conventional: 0-1k-10k-100k-1MΩ-10MΩ-100MΩ-1,000MΩ (1.5 open circuit voltage, 56mW maximum power applied to device under test, and 10 Ohm center scale on low range).

AC and DC Microamperes: 0-5-15-50-150-500 at 45 mV.

AC and DC Milliamperes: 0-1.5-5-15-50-150-500 at 45 mV.

AC and DC Amperes: 0-1.5 at 45 mV (Optional external shunt for 0-15A measurements).

Decibels: −70 to +66 ("0" dB is equal to .775 V).

Accuracy: DC ±2% Voltage, ±3% Current; AC ±3% Voltage, ±4% Current; (full scale).

Scale Length: 6¾″.

Meter: Diode overload protected suspension movement.

Case: Shielded, molded, black, 8″ w X 5″ d X 7″ h.

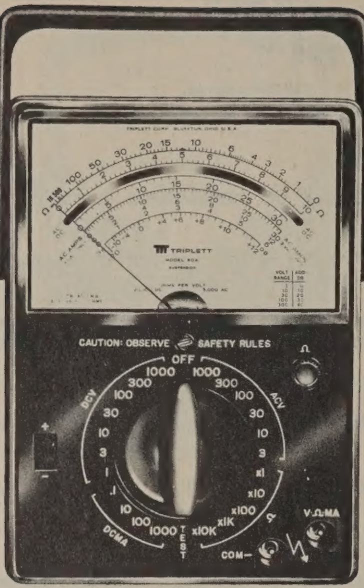
Batteries: NEDA 9V 1604 (3), 1½V 13F (1).

Complete with 48″ shielded probe, 36″ grd. lead, alligator clips, batteries and instruction manual. Shpg. Wt. 10½ lbs.

Model 801 Cat. No. 3071 ....**$265.00**

LABORATORY ACCURACY V-O-Ms

MODEL 60-A



1. **X'TRA RUGGED—Will withstand an accidental drop up to a five foot height.**
2. **OVERLOAD PROTECTED—All ranges protected by diode and unusual three fuse arrangement, including 1/8 amp, 1 amp and 2 amp/1000V fuses.**
3. **SAFETY DESIGNED FOR YOU—Designed to most rigid safety standards; completely insulated unit including newly designed safety leads.**

RANGES

DC Volts: 0-0.3-1-3-10-30-100-300-1000 (Approx. 20,000 Ohms per Volt).
AC Volts: 0-3-10-30-100-300-1000 (Approx. 5,000 Ohms per Volt).
Ohms: 0-1k-10k-100k-1MΩ-10MΩ (12 Ohms center scale on low range).
DC Microamperes: 0-100 at approx. 320mV.
DC Milliammeters: 0-10-100-1000 at approx. 320mV.
Decibels: −20 to +52 ("0"dB at 1mW on 600 Ohm line).
Accuracy: ±1½% DC; ±3% AC; (full scale).
Scale Length: 4½".
X'TRA Rugged: Will withstand an accidental drop up to a five foot height with deviation from stated accuracy not exceeding ±4%.
Overload Protected: All ranges protected by diodes and unusual three fuse arrangement, including 1/8 amp, 1 amp and 2 amp/1000V fuses.
Safety Designed to most rigid safety standards to prevent explosive arcs in high energy circuits, up to the 2 amp/1000V (20kW) fuse capacity.
Meter: Diode overload protected ruggedized suspension movement, easily replaced integral module, DC polarity reversing switch, mirror scale, ½% resistors.
Confidence test: Reassurance check of instrument meter.
Case: Molded, black, high impact thermoplastic; easy external access to sealed battery and fuse compartment; molded plastic handle will hold tester at 30° angle; 5¼" W X 7½" H X 3¼" D.
Batteries: NEDA 9V 1604 (1), 1½V 13F (1).
Complete with 48" safety test leads, insulated alligator clips, batteries, spare 1/8A and 1A fuses and instruction manual. Shpg. wt. 4 lbs.
Model 60-A Cat. No. 3148 ....**$106.00**

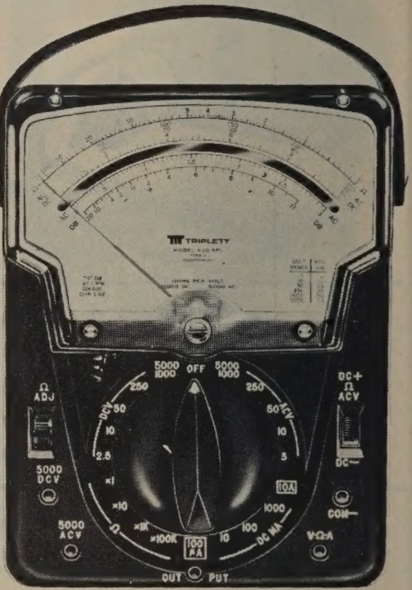
MODEL 630-APL V-O-M TYPE 4

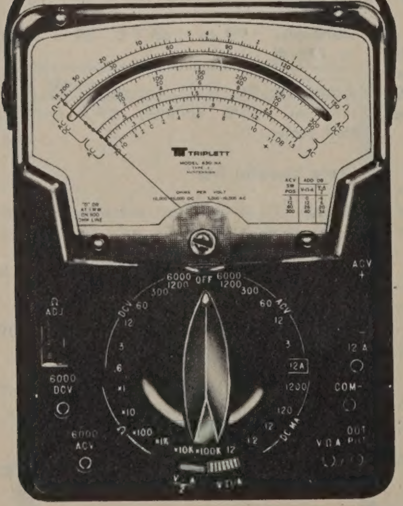
1. **Accuracy 1½% DC and 3% AC; mirrored scale; diode overload-protected suspension movement.**
2. **27 range V-O-M with single range switch minimizes error; DC polarity reversing switch.**
3. **4 ohmmeter ranges with 4.4 Ohms center scale.**

RANGES

DC Volts: 0-2.5-10-50-250-1,000-5,000 (20,000 Ohms per Volt); 0-0.25 at 100 μA.
AC Volts: 0-3-10-50-250-1,000-5,000 (5,000 Ohms per Volt). Frequency range 10 Hz to 500 kHz.
Ohms: 0-1k-10k-1MΩ-100MΩ (4.4 Ohm center scale on low range).
DC Microamperes: 0-100 at 250 mV.
DC Milliamperes: 0-10-100-1,000 at 250 mV.
DC Amperes: 0-10 at 250 mV.
Decibels: −20 to +49 ("0" dB at 1 mW on 600 Ohm line).
Output Volts (AC): 0-3-10-50-250 (5,000 Ohms per Volt).
Accuracy: ±1½% DC; ±3% AC; (full scale).
Scale Length: 4½".
Meter: Diode overload protected suspension movement, DC polarity reversing switch, mirror scale, ½% resistors.
Case: Molded, black, 5½" w X 3-11/32" d X 7½" h.
Batteries: NEDA 30V 210 (1), 1½V 13F (1).
Complete with 48" leads, alligator clips, batteries and instruction manual. Shpg. wt. 5 lbs.
Model 630-APL Cat. No. 3038 .... **$94.00**

Model 630-APLK: Similar to Model 630-APL with solid-state switching circuit overload protection for burnout protection of entire tester. Cat. No. 3120.
$136.00





MODEL 630-NA V-O-M TYPE 3

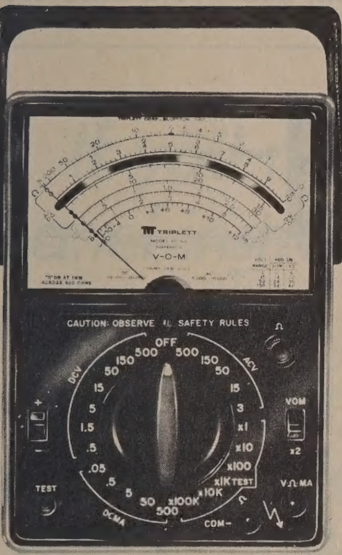
1. **70-range V-O-M with single range switch and DC polarity-reversing switch.**
2. **Accuracy 1½% DC and 3% AC; mirrored scale.**
3. **Diode overload-protected suspension movement; temperature compensation.**

RANGES

DC Volts: 0-0.6-3-12-60-300-1,200-6,000 (10,000 Ohms per Volt). 0-0.3-1.5-6-30-150-600-3,000 (20,000 Ohms per Volt). 0-0.120 at 60 microamperes; 0-0.240 at 120 microamperes.
AC Volts: 0-3-12-60-300-1,200-6,000 (5,000 Ohms per Volt). 0-1.5-6-30-150-600-3,000 (10,000 Ohms per Volt). Frequency range 35 Hz to 20 kHz.
Ohms: 0-1k-10k-100k-1MΩ-10MΩ-100MΩ (4.4 Ohm center scale on low range).
DC Microamperes: 0-60-600 at 120 mV; 0-120 at 240 mV.
DC Milliamperes: 0-6-60-600 at 120 mV; 0-1.2-12-120-1,200 at 240 mV.
DC Amperes: 0-6 at 120 mV; 0-12 at 240 mV.
Decibels: −26 +51 ("0" dB at 1 mW on 600 Ohm line).
Output Volts (AC): 0-3-12-60-300 (5,000 Ohms per Volt).
Accuracy: ±1½% DC; ±3% AC; (full scale).
Scale Length: 4½".
Meter: Diode overload protected suspension movement, DC polarity reversing switch, mirror scale, ½% resistors, slide switch for doubling range selection.
Case: Molded, black, 5½" w X 3-11/32" d X 7½" h.
Batteries: NEDA 30V 210 (1), 1½V 13F (1).
Complete with 48" leads, alligator clips, batteries and instruction manual. Shpg. Wt. 5 lbs.
Model 630-NA Cat. No. 3042 .... **$118.00**

LABORATORY ACCURACY V-O-Ms

MODEL 60-NA



1. **X'TRA RUGGED—50ranges with mirror scale and ±1½% DC accuracy—will withstand an accidental drop up to a five foot height.**
2. **OVERLOAD PROTECTED—All ranges protected by diode and unusual three fuse arrangement, including ⅛ amp, 1 amp and 2 amp/1000V fuses.**
3. **SAFETY DESIGNED FOR YOU—Designed to most rigid safety standards; completely insulated unit including newly designed safety leads.**

RANGES

DC Volts: 0-0.15-0.5-1.5-5-15-50-150-500 (Approx. 20,000 Ohms/Volt).

X2: 0-0.3-1-3-10-30-100-300-1000 (Approx. 10,000 Ohms/Volt).

AC Volts: 0-3-15-50-150-500 (Approx. 10,000 Ohms/Volt).

X2: 0-6-30-100-300-1000 (Approx. 5,000 Ohms/Volt).

Ohms: 0-1k-10k-100k-1MΩ-10MΩ-100MΩ (6 Ohm center scale on low ranges).

DC Microamperes: 0-50-500 at approx. 150mV.

DC Milliammeters: 0-5-50-500 at approx. 150mV.

X2: 0-1-10-100-1000 at approx. 300mV.

Decibels: −20 to +52 ("O"dB at 1mW on 600 Ohm line).

Accuracy: ±1½% DC: ±3% AC (Full scale).

Frequency Response: ACV through 300 compensated from 20Hz to 20kHz.

Scale Length: 4½".

X'TRA Rugged: Will withstand an accidental drop up to a five foot height with deviation from stated accuracy not exceeding ±4%.

Overload Protected: All ranges protected by diodes and unusual three fuse arrangement, including ⅛ amp, 1 amp and 2 amp/1000V fuses.

Safety Designed to most rigid safety standards to prevent explosive arcs in high energy circuits, up to the 2 amp/1000V (20kW) fuse capacity.

Meter: Diode overload protected ruggedized suspension movement, easily replaced integral module, DC polarity reversing switch, X2 range doubling switch, mirror scale, ½% resistors.

Confidence Test: Reassurance check of instrument meter.

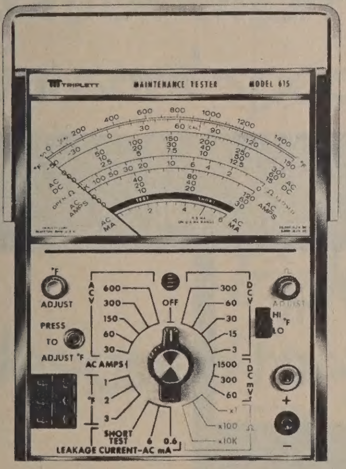
Case: Molded, gray, high impact thermoplastic, easy external access to sealed battery and fuse compartment; molded plastic handle will hold tester at 30° angle; 5¼"W x 7½"H x 3¼"D.

Batteries: NEDA 30V 210 (1), 1½V 13F (1). Complete with 48" safety test leads, insulated alligator clips, batteries, spare ⅛A and 1A fuses and instruction manual. Shpg. wt. 4 lbs.

Model 60-NA Cat. No. 3151 .... **$136.00**

SPECIAL FEATURE V-O-Ms

MODEL 615 MAINTENANCE TESTER



1. **Maintenance tester . . . measures AC/DC Volts, Ohms, temperature and AC current leakage.**
2. **Two electrically compensated temperature ranges with switch selection for up to three temperature probes; ideal for air-conditioning, refrigeration maintenance.**
3. **Low millivolt ranges for thermocouple circuit touble-shooting; special scale for direct reading of AC Amps with clamp-on adapter accessory.**

RANGES

DC Volts: 0-.06-.3-1.5-3-15-30-60-300 (20,000 ohms/volt).

AC Volts: 0-3-30-60-150-300-600 (5,000 ohms/volt).

Ohms: 0-1K-100K-1MΩ. 10 ohm center scale on low range.

AC Amperes: (requires accessory Model 20-A Adapter) 0-6-12-30-60-120.

Temperature: −50°F to +150°F; −50°F to +1500°F.

AC Current Leakage: (through a network that simulates the human body. Short test and 0-0.6-6mA AC for ANSI C101.1—1971 commercial appliance AC Current Leakage Tests.

Accuracy: ±2% DC Voltage and Ohms ranges: ±3% AC Voltage and temperature ranges, ±4% AC Current Leakage ranges, ±8% AC Ampere ranges (basic VOM ±3%, Adapter ±5%).

Scale Length: 4½".

Meter: Diode overload protected suspension movement.

Case: Black, molded high impact plastic, 5⅛" W x 3$\frac{3}{16}$" D x 6½" H.

Batteries: NEDA 9V 1604 (2), 1½V 13F (1). Complete with 48" leads, 6' thermocouple probe, alligator clips, batteries and instruction manual. Shpg. Wt. 2½ lbs.

With 1369 different sizes, styles and types of analog panel instruments, there's almost certainly one to suit your needs. Choose from:

- **AC, DC, and RF types**
- **Volt, millivolt and VU meters**
- **Amp, milliamp and microamp meters**
- **Null meters, ohmmeters and pyrometers**
- **Pivot and jewel, suspension, iron vane, d'Arsonval**
- **All DC movements contain exclusive bar-ring self shielded magnet**
- **½", 1½", 2½", 3½", 4½" edgewise types**
- **1½", 2½", 3½", 4½", 5½", 6½", 7½", 8½" round, square & rectangular models.**

In addition to a large stock of standard models at the Bluffton, Ohio, plant and most Triplett distributors, standard models and specials are available from 40 authorized Sales / Service / Modification Centers throughout the United States and in Canada.

Although we stock some 1369 different styles, sizes and types of standard panel instruments, a very large proportion of our customers buy custom instruments.

Because they need:

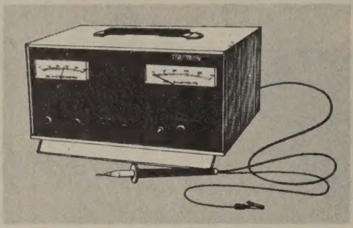
Custom Dials. Reading in such units as pH, roentgens, mm Hg, rpm, %, inches. **Custom Cases.** Square, round, rectangular, edgewise (horizontal and vertical), wide, narrow, shallow. **Custom Ranges.** 0-28.4, 25-0-75, 80-220, 75-0 or virtually any electrical range not listed in catalog. **Custom Accuracy.** To within ½% with mirror scales and knife-edge pointers. **Custom Tracking.** To match the specific needs of existing or new instrument designs. **Custom Resistance.** For low circuit loading with tolerances as low as ±1%. **Custom Damping.** To meet stringent electrical and vibration requirements. What custom panel instrument specifications do you need to make your product more reliable, more accurate, more rugged and — in the long run — less expensive? For quick, dependable delivery of small quantities of Triplett's "designed-for-you" panel instruments, contact your Triplett Sales/Service/Modification Center. For prototypes or production quantities, contact your Triplett representative. He'll put you in touch with our Instrument Designers/Engineers who'll help you analyze the problem and suggest the optimum cost/result solution.

TOROTRON CORP. DEPT. EM, 255 WASHINGTON ST., MT. VERNON, NY 10553, (914) 664-2050

AC/DC Hipot Insulation Tester

Application: • Production testing for insulation resistance, Dielectric withstand, etc. • High Voltage Capacitor • Motors • Wire & Cable • Dielectric Materials • Transformers & Coils • Bushing & Insulators • High Voltage Rectifiers • UL Listed Electrical Hi Pot Tests.

SHP Hipot Tester



The RHP & SHP Series Test Sets are reliable, sensitive power sources for laboratory or production testing. These sets having fully zero start interlock with HV on and off switches — compels operator to start test at zero volts. Sensitive multi-range current meter circuit for accurate leakage measurement, built in current limiting, coupled with a meter relay for overload sensing provides overload protection and facilitates GO no GO testing.

Features:

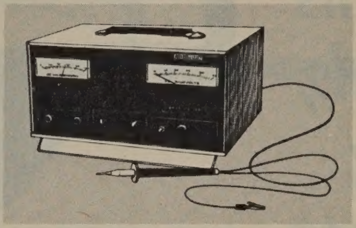
- **High Voltage Output Control:** Continuously variable from 0 to full voltage.
- **Leakage Detector:** Continuously adjustable from 500 μA to 5 mA permitting non-destructive testing of insulation.
- **Arcing Detector:** Visual Indicators illuminated on front panel when component Leakage or Arcing is detected.
- **Voltage Monitoring:** 4½″ Taut Band Mirror Scale Ruggedized Kilovoltmeter with an accuracy of 2% monitors actual output voltage.
- **Current Monitor:** Multi-range leakage current meter with overload current setting to shut off High Voltage when preset leakage current exceeds set limit.

Specifications:

Input: 115 VAC, 60 Hz, 3 Amp.
Size & Weight: 9½″H x 17″W x 11″D. Approx. 22 lbs.
Meter: 2% full scale accuracy. 4½″ ruggedized meter.

DC Model	Output Voltage	Current Meter Range	Price 1-5
SHP-02	2 KVDC	50 μA 500 μA 5000 μA	$400
SHP-04	4 KVDC		425
SHP-07	7 KVDC		440
SHP-12	12 KVDC		460

RHP Hipot Tester



The RHP Series is similar to the SHP Series, with the addition of a TIMER that ranges from 2 seconds to 120 seconds. It is particularly useful in the testing of High Voltage Capacitor, where specification calls for a predetermined testing duration. When time has elapsed the timer shuts the High Voltage off and places a short circuit on output terminals so as to discharge the circuit and permit safe removal of test leads. An override switch permits the bypassing of Timer Unit.

Features:

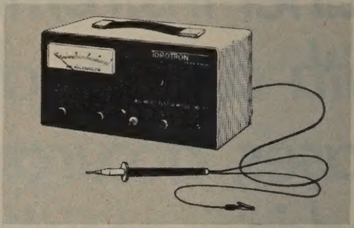
- **High Voltage Output Control:** Continuously variable from 0 to full voltage.
- **Leakage Detector:** Continuously adjustable from 500 μA to 5 mA permitting non-destructive testing of insulation.
- **Voltage Monitoring:** 4½″ Taut Band Mirror Scale Ruggedized Kilovoltmeter with an accuracy of 2% monitors actual output voltage.
- **Current Monitor:** Multi-range leakage current meter with overload setting to shut off High Voltage when preset leakage current exceeds set limit.
- **Test Duration Timer:** A timer covering the range from 2 seconds to 120 seconds that permits limiting the time during which the component is tested. An override switch permits the bypassing of timer.

Specifications:

Input: 115 VAC, 60 Hz, 3 Amp.
Size & Weight: 9½″H x 17″W x 11″D. Approx. 22 lbs.
Meter: 2% .full scale accuracy. 4½″ ruggedized meter.
Timer Range: 2-120 seconds.

DC Model	Output Voltage	Current Meter Range	Price 1-5
RHP-02	2 KVDC	50 μA 500 μA 5000 μA	$450
RHP-04	4 KVDC		480
RHP-07	7 KVDC		520
RHP-12	12 KVDC		580

THP Hipot Tester



The THP AC/DC testers are Hi Quality Low Cost Production HI POT Testers. Designed for use by unskilled personnel.

Features:

- **High Voltage Output Control:** Continuously variable from 0 to full voltage.
- **Leakage Detector:** Continuously adjustable from 500 μA to 5 mA permitting non-destructive testing of insulation.
- **Arcing Detector:** Visual indicators illuminated on front panel when component Leakage or Arcing is detected.
- **Voltage Monitoring:** 4½″ Taut Band Mirror Scale Ruggedized Kilovoltmeter with an accuracy of 2% monitors actual output voltage.

Specifications:

Input: 115 VAC, 60 Hz, 3 Amp Max.
Size & Weight: 7″H x 12″W x 6″D. Approx. 18 lbs.
Meter: 2% full scale accuracy. 4½″ ruggedized meter.
Output: Shielded Hi Voltage Probe.
Short Circuit Current: 18 mA.

For "Audio Alarm and latching relay" add "-AD" to Part Number and $30 to Price. Example: THP-05-AD.

AC Model	Output Voltage	Price 1-5
THP-02	2 KVAC	$175
THP-03	3 KVAC	185
THP-05	5 KVAC	200
THP-10	10 KVAC	315

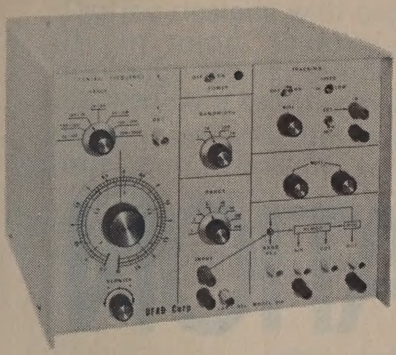
DC Model	Output Voltage	Price 1-5
THP-03D	3 KVDC	$185
THP-04D	4 KVDC	200
THP-07D	7 KVDC	220
THP-12D	12 KVDC	325

NOTES: • HiPot Testers available in many other voltage ratings and features. Consult factory for modifications. • All output voltages referenced to ground. Floating output available on request.

Additional Features: • Zero Start Interlock • Audible Failure Signal

Specification and price subject to change without notice.

LAB-ALL



Wide ranging signal analysis capability: Simultaneous Frequency, Amplitude, Phase and Distortion outputs.

The LAB-ALL is configured as a high performance 'Front End' for your standard lab instruments (Scope, DVM and frequency counter).

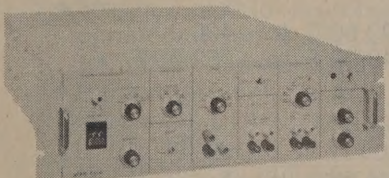
Frequency Range: 30Hz to 100kHz.
Input Range: 30mV to 300VRMS.
Tracking Range: 20:1.
Four analysis bandwidths.
Excellent accuracy.

Functions:
- Tracking Bandpass/Notch Filter
- Wave Analyzer
- Distortion Analyzer
- Network Analyzer
- Spectrum Analyzer
- Phase Sensitive Voltmeter
- Phase Meter
- Servo Analyzer . . . . . and more!

Applications:
- Lab signal analysis
- Doppler shift measurements
- Rotational machinery balancing
- Determining transmission line attenuation and phase shift
- Speaker & microphone testing
- Noise measurements
- Amplifier distortion, phase response & amplitude testing
- Analyze low-pass and high-pass filter characteristics

$2495

PROGRAMMABLE DISTORTION ANALYZER



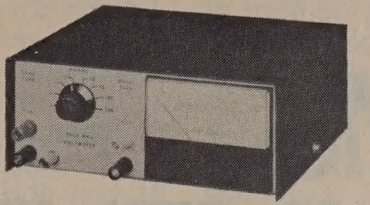
The DA-72 is a fast, accurate system component for automated distortion analysis. Its functions are programmed by binary coded command signals from a computer or other system controller.

Frequency Range: 20Hz-100kHz (phase locked).
Input Range: 30mV to 300VRMS.
Distortion Range: 0.3% to 100%.
Speed: Up to 10 measurements/sec.
Four analysis bandwidths.
Local or remote operation.
Control lines: 19 parallel, TTL.
Distortion measurements are made by an RMS responding converter with high accuracy.

Outputs: Distortion & fundamental; 0-3VDC, calibrated. Distortion & fundamental; 0-3VAC, uncalibrated. Analyzer oscillator signal; approximately 2VAC (center frequency).

$3500

TRUE RMS VOLTMETER

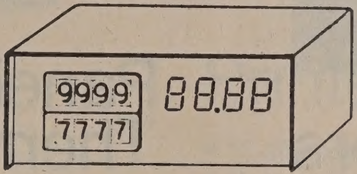


An accurate, wideband true RMS voltmeter with a modest price. The low cost and excellent performance are possible because of a proprietary computational RMS converter design. A 3½ inch, taut-band, mirrored scale meter is standard. The converter output is on the front panel for ease of use. The output is scaled 0 to +1VDC on the "Ones" ranges and 0 to +3VDC on the "Threes" ranges to simplify interpretation of the data.

Frequency Range: 10Hz to 1MHz.
Voltage Range: 733A 100mV to 300V full scale.
733B 30mV to 100V full scale.
733C 3mV to 10V full scale.
Response: Root-mean-square (ANY waveshape).
Basic Accuracy: ±1% of full scale.
Crest Factor: Greater than 5.5:1 at full scale.
Converter Accuracy: ±0.25% of full scale.
Power: 115 or 230V, 2 watts.
Size: 8"w x 3.5"h x 7.5"d.

$345

INDUSTRIAL TACHOMETER

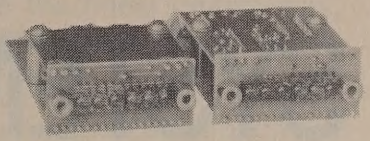


The basic tachometer is a 4-digit rate indicator (RPM, FPM, Hz, etc.) which can be set to read in engineering units by a DIP-switch programmable time base and selectable decimal point location. Setpoints are optional, with a choice of one or two setpoints of either two or four digits each. The setpoints each have three clocked outputs: Display < Setpoint, Display = Setpoint and Display > Setpoint. Dual setpoint models may be configured as double-ended limit comparators.

Display: Four 0.3 inch LED digits.
Time Base: Programmable, .01 to 2 seconds.
Display Update: 1 or 2 second intervals.
Setpoints: Digital by thumbwheel switches.
Outputs: Buffered 5V CMOS (2 TTL loads).
Input: Accepts various magnetic, optoelectronic and other sensors with 5V outputs.
Power: 115VAC.

From $225

MINIATURE EVENT COUNTER AND DOWN-TIME CLOCK

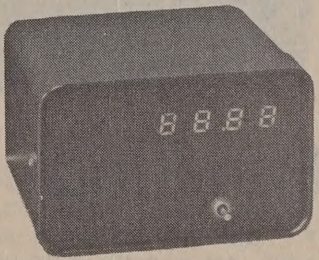


The miniature event counter and its companion down-time clock are both 6-digit devices. The event counter displays up to 999,999 counts. The down-time clock accumulates to 99,999.9 minutes. Operation: The down-time clock senses the counter input and automatically starts if no input occurs within a preset delay time (up to 1 min.). The down-time count continues until the count input returns, then stops and reactivates the time delay, to be ready if the count input ceases again. The counter and clock are available singly or assembled into custom multi-unit systems with DC supply, battery backup and other options.

Size: 1.8"w x .85"h x 3.25"d (each).
Count Rate: 2400 counts per minute (counter).
Display: 6 LED digits, .11"h (magnified).
Power: 6-9VDC, < 0.5W each with display on.
Display Blanking: Standard.
Reset: External.
Count Input: Form A contact closure, electronic switches with 6-9VDC outputs.

$44.50 Counter
$59.50 Clock

INDUSTRIAL STOPCLOCK



This 4-digit timer is suited for many different applications. It offers a choice of five timing ranges, eight remote triggering options (four AC and four DC) and an optional selector switch for up to 6 separate trigger inputs. Other features include: Easy panel mounting or bench use, AC line power, an easily read LED display, small size and low cost.

Time Ranges: 9.999s, 99.99s, 999.9s, 9999s and 9.999min.
Trigger Inputs: Up to 6, pulse or maintained contact, high or low active, AC or DC. Trigger from 115VAC signals with optional transformer module.
Display: Four 0.3 inch LED digits.
Size: Approximately 4"w x 2.5"h x 4"d.

From $140

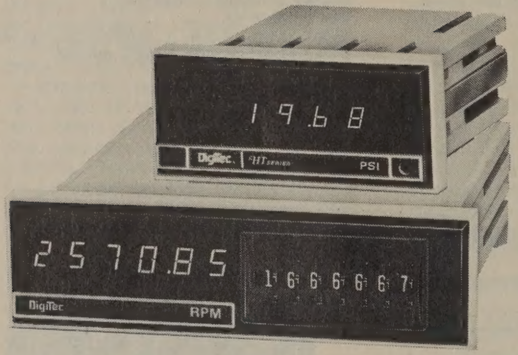
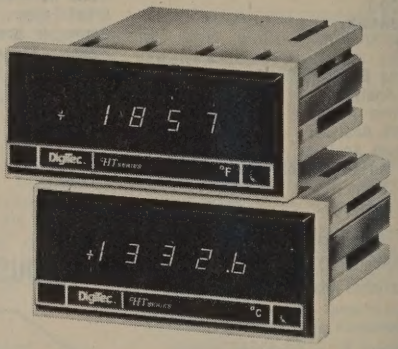
SYSTEMS INSTRUMENTATION





Panel Indicators

- 71 different models
- 3½, 4½ or 6 digit LED display
- DCV, DCA & Autoranging
- ACV (Avg.), ACV (true rms)
- Accepts an input current, voltage or pulses from any transducer/transmitter and displays in desired engineering units. (i.e., 4-20 mA, 1-5V, dc-1MHz)
- Rotational or linear measurements (RPM, IPS, FPM, Hz or any other unit)
- Flow rate or total flow measurements (bbls/hr, gals/min, bbls, gals, liters or other volume units)
- Pressure or force measurements (psi, lbs, kg or other units)
- Ratio measurements for draw or % of elongation
- 115/230V ac or 5V dc operation
- Buffered parallel BCD output with "single line enable" for systems compatibility
- Field programmable; thumbwheel switches or rear connector

Panel Mount Thermometers

- 28 different models
- 3½ and 4½ digit LED display
- Thermistor: −30.00°C to +100.00°C
  −22.00°F to +199.99°F
- Platinum Resistance: −100.00°C to +400.00°C
  −148.00°F to +752.00°F
- Thermocouple:

TYPE	°C	°F
E	− 98.0° to +1000.0°C	−144.0° to +1832.0°F
J	−180.0° to + 760.0°C	−292.0° to +1400.0°F
K	− 20.0° to +1372.0°C	000.0° to +2500.0°F
T	−152.0° to + 400.0°C	−240.0° to + 752.0°F

- Accuracy to 0.3°C or 0.5°F
- 115/230V or 5VDC Operation
- Buffered parallel BCD output with single line multiplex to eliminate complex BCD switching
- Sample on command

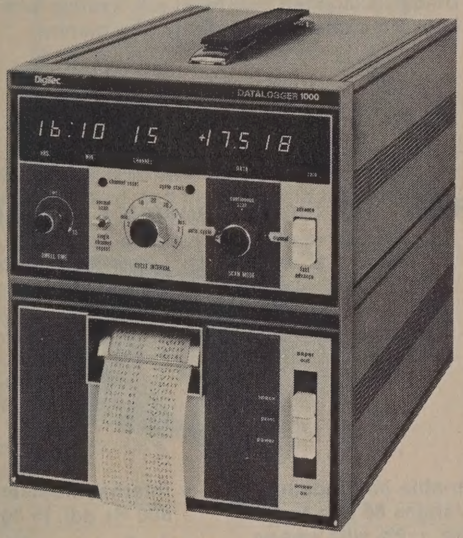
DigiTec designs with quality and reliability in mind. Quality is assured by thorough testing during production and backed by a full year warranty.

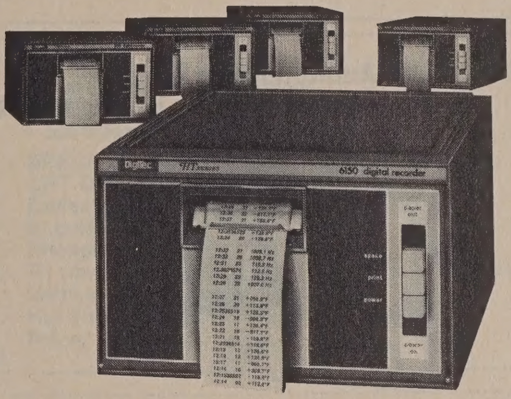
Easy maintainability is a by-product of our construction technique. This, coupled with our 30 worldwide and 18 domestic service centers gives you the edge in minimum downtime.

In addition to panel meters and printers, we manufacture the finest multimeters, thermometers, counters and data acquisition systems.

For complete details of our product line, please contact us or our representative in your area.

DigiTec: precision measurements to count on!





Dataloggers

- 20,000 count (4½ digit) display of measured data
- Continuous visual display of all information, data, time and channel
- 20 internal channels (field expandable to 100)
- Hardcopy printout of all displayed data with 2 colors and data separation
- 30 different field-interchangeable, signal conditioning modules supply different parameter capabilities
- Parameters include: ACV, DCV, ACV (true rms), DCV (autoranging), Temperature (RTD-Thermistor or Thermocouple), and scaled modules for transducer/transmitter outputs
- FET or relay switching
- Internal crystal clock supplies real or elapsed time display
- Compact size and weight affords portability
- Low power consumption
- 9 selectable cycle intervals from 1 min. to 5 hours
- Unlimited alarm capability
- Optional BCD outputs
- Simplicity of operation, no special training required for operator

Printers

- 12 different models
- Numeric or alpha-numeric configuration
- Fast front panel loading
- Up to 21 column capacity
- Models with intervals event counter and clock
- Inputs: parallel, serial/parallel, or serial RS232
- Floating decimal
- Column blanking on command
- Red and black printing or electro-sensitive
- Mean time between failure—25,428 hours
- OEM configurations

DigiTec.

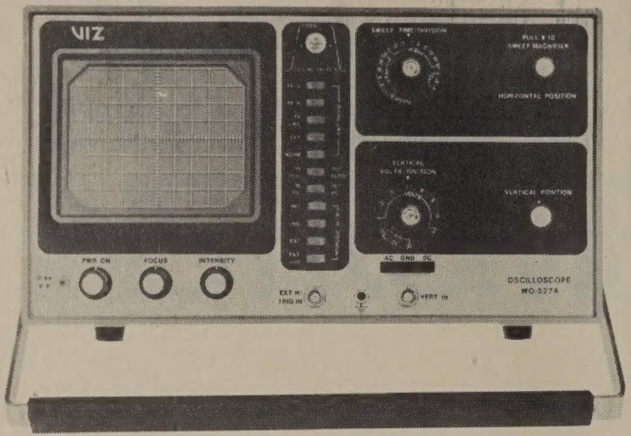
WO-527A 15 MHz. Trigger Sweep Scope

$479.00

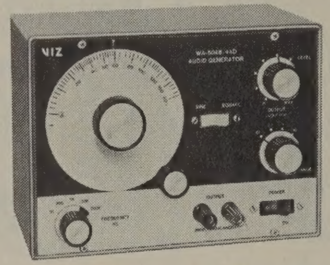


VIZ

- Freq. resp. DC to 15 MHz (−3 dB) sensitivity 10 mV/cm. to 20V in 11 ranges. Rise time 24 n. sec. Horz. Osc. Freq. DC to 1MHz.
- Trigger mode normal or auto freq. resp. DC to 30 MHz.
- Calibrated time base 0.5μ sec. to 0.5 sec., 19 ranges.
- Preset TVV and TVH plus special TV line selector to display single line of TV video frame.
- Times 10 sweep Mag. advanced I.C. circuitry thru-out full shield CRT with P-31 Phos.
- Unique simplified trig. level adj. system with LED indicators show trig. polarity at a glance.

WA-504B/44D Audio Sine/Sq.-Wave Generator

$120.00



- Output 20 Hz to 200 kHz in 4 ranges, stability ± 0.5% and ± 5% dial cal.
- Voltage output 4 ranges 0.01 to 10V at 600Ω.
- Sine wave harmonic distortion 0.15% sq. wave rise and fall 150 ns., tilt 2%.
- All solid-state, throughout, 3 wire AC cord.

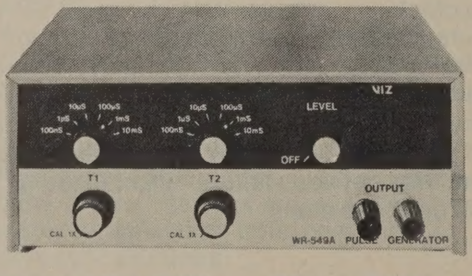
WR-50C RF Signal Generator

$120.00

- Tunable on fundamental 6 ranges 85 kHz to 40 MHz ± 2% with sweep output at 455 kHz and 10.7 MHz plus External xtal.
- RF output 0.05V rms, 2 step 10 to 1 plus fine adj. attenuator.
- Internal Modulating freq. 600 Hz adj. to 80%.
- Audio output 6V rms across 15 kΩ load.
- FET amplifier for rugged stability, 3 wire AC cord.

WR-549A Pulse Generator

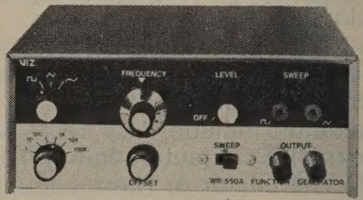
$119.00



- Freq. range 5 Hz to 5 MHz ±5% output adj. 0-15V into 600Ω, 0-6V into 50Ω.
- Pulse width adj. 100 ns. to 0.1 sec. rise and fall time 20 ns.
- TTL and CMOS compatible, on and off time independently adj.
- Ideal for logic design or digital circuit trouble-shooting
- 3 wire AC cord.

WR-550A Function Generator

$139.00



- Sine, sawtooth and sq. wave output 1 Hz to 1MHz.
- Peak to peak output 0-20V at 600Ω plus 10V adj. offset.
- 10 to 1 freq. sweep with ext. sweep voltage of any wave form.
- Freq. stability 200 PPM/°C, accuracy to 100 kHz ± 5% of dial above 100 kHz ± 8%.
- TTL and CMOS compatible with sq. and sawtooth fix output 4 VDC.
- 3 wire AC cord.

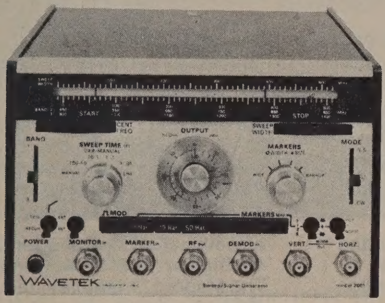
INDIANA INCORPORATED

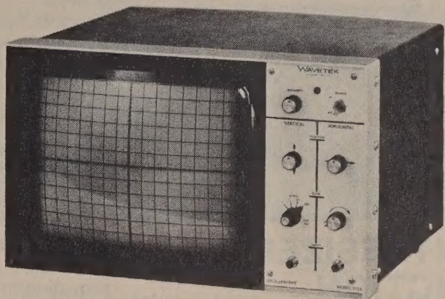
MODEL 2001 SWEEP SIGNAL GENERATOR



- **1 MHz to 1400 MHz in one unit.**
- **Ideal for both broad and narrow-band applications.**
- **Calibrated RF output system.**
- **Manual, triggered, or recurring sweep mode.**
- **Excellent flatness and display linearity.**

SPECIFICATIONS
Frequency Range: 1 to 1400 MHz.
RF Output:
Continuously adjustable from +10 dBm to -80 dBm.
Display Linearity: 2%.
Output Flatness: ±0.5 dB.
Spurious Signals: -30 dB.
Marker Accuracy: 0.005%.
Price: $1,950.

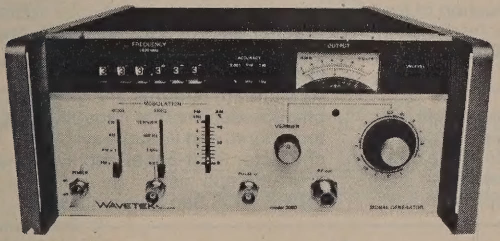
MODEL 1901C DISPLAY OSCILLOSCOPE



- **Large 12-inch diagonal CRT.**
- **1 mV/ division sensitivity.**
- **Bright, well-focused trace.**
- **Ideal for production test applications.**

SPECIFICATIONS
CRT Display: 12-inch diagonal.
Deflection: Magnetic.
Acceleration Voltage: 9 kV nominal.
Phosphor:
P1 (medium persistence); P4 and P7 available as options.
Vertical Bandwidth: DC to 15 kHz.
Horizontal Linearity: 3%.
Price: $545.

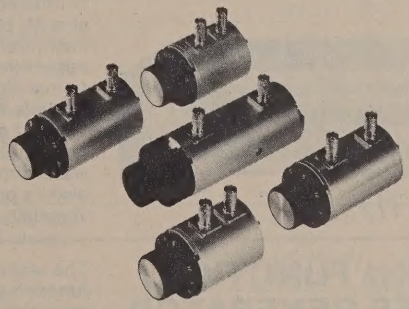
MODEL 3000 SIGNAL GENERATOR



- **1 MHz to 520 MHz with 1 kHz resolution.**
- **Over-all frequency accuracy of 0.001%.**
- **Phase-lock stability.**
- **Built-in frequency programmability.**
- **Calibrated output from +13 dBm to -137 dBm.**
- **Internal and external AM/FM capability.**

SPECIFICATIONS
Frequency Range: 1 MHz to 520 MHz.
Resolution: 1 kHz.
Accuracy: CW and AM modes: 0.001%.
Stability: CW and AM modes: 0.2 PPm/hour.
Power Level: +13 dBm to -137 dBm.
Residual FM: Typically 200 Hz.
AM/FM Modulation: Internal—400 Hz and 1 kHz.
Programmability: Frequency is digitally programmable.
Price: $2,400.

SERIES 5000 ATTENUATORS



- **Broadband operation.**
- **Low VSWR.**
- **High repeatable accuracy.**
- **Ideal for systems manufacturers, plant and field use.**

SPECIFICATIONS
Frequency Range: DC to 2,000 MHz.
Impedance: 50 ohms (75-ohm units also available).
Attenuation:
Model 5001: 0–1 in 0.1 dB steps.
Model 5010: 0–10 in 1 dB steps.
Model 5070: 0–70 in 10 dB steps.
Model 5080: 0–80 in 1 dB steps.
Prices: Models 5001, 5010, and 5070: $95.
Model 5080: $195.

30 MHz FUNCTION GENERATOR

Model 162

The Model 162 provides an extremely wide frequency range for both high and low frequency applications from 30 μHz to 30 MHz.

Variable Rise and Fall Time

For maximum utility in pulse applications, the Model 162 provides positive, negative and balanced pulse outputs. The duty cycle, rise and fall times and dc offset levels of these outputs are all independently variable.

Dual High/Low Outputs

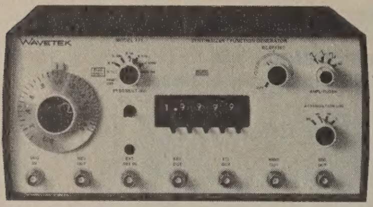
The output system of the Model 162 is designed to give maximum control and clean signals at all output levels. The step attenuator operates in 10 dB increments with an overlapping vernier control, giving control over an 80-dB dynamic range.

Trigger and Gated Operation

The Model 162 is settable for single cycles or "bursts" of cycles of the selected waveform. You can trigger the generator with an external command signal or with the manual front panel switch. The trigger start/stop point can be easily adjusted to give haversine outputs as well as complex waveforms.

PRICE (FOB San Diego) **$995**

SYNTHESIZER/ FUNCTION GENERATOR



Model 171

The Model 171 is a function generator and synthesizer combined in one package providing the best of both units at function generator prices.

0.1 Hz to 2 MHz Frequency Range

The Model 171 frequency range is 0.1 Hz to 2 MHz in the function generator mode. In the synthesizer mode, range is from 1 Hz to 2 MHz with accuracy of 0.005%. You have either mode, function generator or synthesizer, with the flip of a switch.

Two Simultaneous Outputs

The Model 171 features two simultaneous outputs with a maximum of 10 volts peak-to-peak into matched termination. The outputs are from 50 and 600 ohm sources. The output is continuously variable from 0 to −80 dB with a combination step and vernier attenuator.

4½ Digit or 1000:1 Dial Control

The Model 171 features frequency control by a dial or a digital switch. You can use digital control in the synthesizer mode with frequency resolution from 0.001 Hz on the lowest decade range to 100 Hz on the highest range. Resolution is full 4½ digits (1.9999). Dial control, in the generator mode, provides ±3% full scale accuracy with infinite resolution.

0.005% Frequency Accuracy

In the synthesizer mode, the output waveform is phase-locked to an internal crystal providing ±0.005% frequency accuracy and frequency stability of 0.0001% per °C.

PRICE (FOB San Diego) **$795**

PROGRAMMABLE SIGNAL SOURCE

Model 172

The Model 172 provides top system performance in its standard configuration and offers a versatile package of options that allows it to perform multiple tasks in systems applications.

Microprocessor Control

The instrument features a microprocessor-controlled interface and preprocessor to simplify programming and application of the instrument. The microprocessor numeric capability relieves the system controller from formatting responsibility.

Multiple Waveforms

The 172 generates sine, square, triangle, ramp, pulse, haversine, and havertriangle waveforms. A no-waveform or dc mode can also be programmed which expands the versatility of the unit to a dc supply with a 50 ohm source impedance. All waveforms may be phase-locked to your external frequency for system frequency coherence.

GPIB Compatibility and Programming Versatility

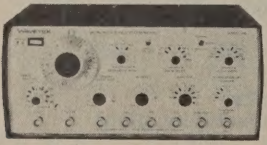
The standard Model 172 accepts synchronous, bit parallel, byte serial ASCII programming. For greater versatility, an option is available which fully conforms to the requirements of IEEE 488-1975, the General Purpose Interface Bus (GPIB).

Other Features

As standard features, the Model 172 also offers sweep and FM capability, trigger and tone burst, and variable symmetry. A 32-character front-panel display is one of many available options.

PRICE (FOB San Diego) **$3,895**

20 MHz FUNCTION/ PULSE GENERATOR

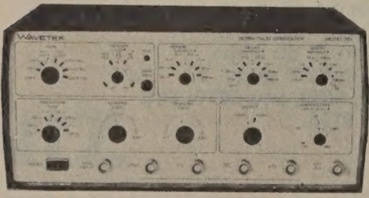


Model 145

The Model 145 offers both the versatility of a function generator and the precise requirements of a pulse generator—both at a cost much lower than that of separate instruments. It operates over a frequency range of 0.001 Hz to 20 MHz, providing sine, square and triangle functions, plus pulse and inverted pulse. With a simple turn of the mode switch, the instrument can be a precision waveform generator with versatile function generator features or a precision pulse generator with controllable period, delay and width. The output of the generator is variable to a full 30 volts peak to peak with simultaneous ECL, ECL, TTL and $\overline{\text{TTL}}$ outputs, and an output sync signal. Features used in either mode include triggering and gating with manual pushbutton or external signals; external voltage control of frequency/period; signal baseline offset and 0 to 60 dB attenuation; and a 0 to +2V signal output proportional to the generator frequency/period.

PRICE (FOB San Diego) **$895**

PULSE GENERATOR



Model 801

The Model 801 is a 50 MHz pulse generator with full pulse shaping and triggering control. Its versatile output system lets you have a variable output and fixed ECL, $\overline{\text{ECL}}$ and TTL outputs simultaneously. You can complement the outputs, independently adjust both levels of the variable output from −20 to +20 volts (20V p-p max) and adjust the rise and fall from <5 ns to 250 ns. All pulses can be fully shaped with independent width, rate and delay controls.

Not only do you get full pulse capability, but also format versatility. Operating modes include continuous, triggered and gated for both single and double pulses. A burst mode gives you an exact number of pulses with each triggering. Another mode allows you to reconstruct or reshape pulses.

Triggering is by a front-panel switch or an external signal. A front-panel LED indicates trigger acceptance. You can trigger and gate on the rising or falling edge of the trigger signal and a particular trigger signal level.

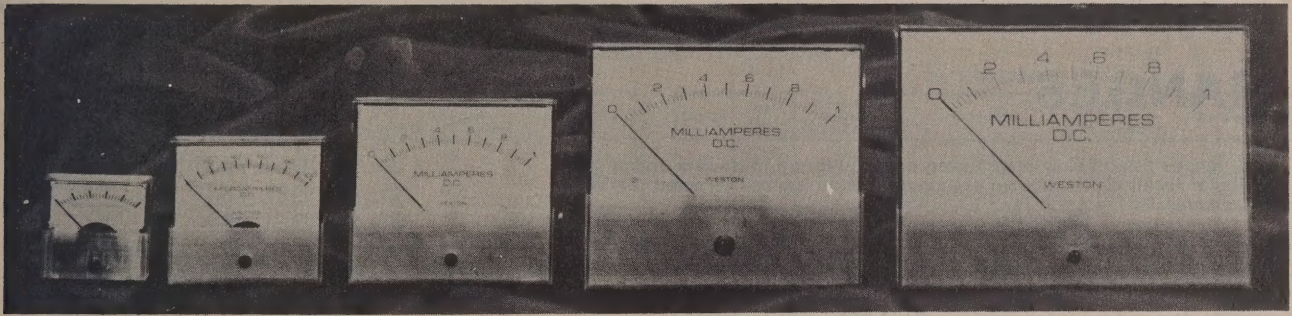
MUSTANG
Panel Meters



MUSTANG

MUSTANG is a new line of precision panel meters by Weston, manufacturers of panel instruments since 1888. MUSTANG answers your need for true economy combined with style, ruggedness and reliability. You'll be glad to know abut the:

- Versatile appearance options—panel, bezel or window mounting
- Taut-band and pivot-and-jewel mechanisms
- Tough plastic pointer—ignores handling and electrical overloads
- White plastic scale, molded-in color which can't chip or yellow
- Ring-Lock mounting option—makes installation a real snap
- Backlighting feature—bright, uniform scale illumination when you need it.

The MUSTANG panel meter contains fewer parts than any other analog panel meter made today. That's why it offers unsurpassed reliability and economy. For top value in new applications or replacement. MUSTANG is your best choice.

The MUSTANG mechanism is a self-shielding CORMAG™ design, exhaustively tested in the lab and in the field to provide day-after-day accuracy and reliability. Welded electrical connections are used throughout. A unique caging design is used in taut band meters for added protection from environmental shock and vibration.

Small in overall size, The MUSTANG mechanism permits rear illumination without shadowing the lower part of the scale. Despite this small size, enough torque is available for crisp, low-overshoot response in VU applications.

2000 SERIES VU METERS

Model	Catalog No.	Scale Type
2022	3841001* 3841002	Type 30 A scale Type 30 B scale
2032	3841001* 3841002	Type 30 A scale Type 30 B scale

Weston VU Meters are available with Type A or Type B scales. The Type A scale stresses the level in VU units for monitoring wire lines. The Type B scale emphasizes percent use of transmitter output and is the standard for broadcast service. The VU meter is designed to read zero VU, or 100%, with 1.228 volts AC applied to the meter and a 3600 ohm series resistor. This represents 4dB above 1 MW in 600 ohms.

** Stock item.*
† When ordering meters, model number must precede catalog number.
△ When ordering meter with optional black painted front change second digit of catalog number "8" to "7."

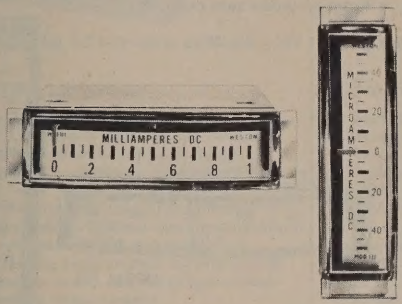
Edgewise Panel Meters

WESTON Model 111

- **Completely flat—can be stacked side-by-side**
- **Flat self-shielded Cormag® mechanism**
- **Saves panel space**



MODEL 111

SPECIFICATIONS

Accuracy: 2% of full scale value for DC (**Model 111**).
3% of full scale value for AC Rectifier Type (**Model 112**)

Scale Length: 1.24 inches

Pointer: Red Lance Type

Movement: Self shielded thin line CORMAG® mechanism. Shock mounted jewel arrangement.

Ranges: Voltage: 50 mv minimum
300 volts maximum
self-contained

Current: 50 ua minimum
2 amps maximum
self-contained

Mounting: Meter is designed to be mounted on a vertical panel with the scale being either horizontally (zero on left) or vertically (zero on bottom) oriented. Most ranges stocked for horizontally oriented scales. Meters can be supplied for a horizontal panel mounting on special order.

Mounting clips fasten to meter behind panel—no screws show on front of panel. For "stacking," thru-holes are provided so stack can be bolted together.

Zero corrector not used on ammeters, milliammeters above 10 Ma, rectifier meters and suppressed zero meters.

All resistances are approximate

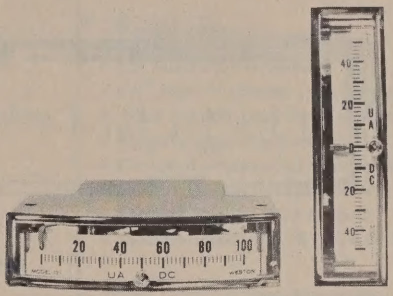
WESTON Model 121

- **Completely flat—can be stacked side-by-side**
- **Parallax eliminated—in-line pointer and scale**
- **Flat self-shielded Cormag® mechanism**
- **Saves panel space**
- **Optional self-contained illumination feature**
- **Front mounted zero corrector**



MODEL 121

SPECIFICATIONS

Accuracy: 2% of full scale value for DC (**Model 121**),
3% of full scale value for AC Rectifier Type (**Model 122**)

Scale Length: 1.875 inches; Anti-parallax in-line scale

Pointer: Red Lance Type

Movement: New shelf shielded thin line CORMAG® mechanism. Shock mounted jewel arrangement.

Ranges: Voltage: 50 mv minimum
300 volts maximum
self-contained

Current: 50 ua minimum
2 amps maximum
self-contained

Mounting: Meter is designed to be mounted on a vertical panel with the scale being either horizontally (zero on left) or vertically (zero on bottom) oriented. Most ranges stocked for horizontally oriented scales. Meters can be supplied for a horizontal panel mounting on special order.

Mounting clips fasten to meter behind panel—no screws show on front of panel. (Bezel furnished for single meter mounting.) For "stacking" thru holes are provided so stack can be bolted together.

Illumination: Two G.E. 328 lamps are used. Recommended operating voltage—5 volts (less than 200 ma per bulb). Expected life greater than 5,000 hours.

Dielectric: 1500 volts RMS

Digital Panel Meters

MODEL 1220 (BIPOLAR)

1659
WESTON
MILLIVOLTS DC

Also available for AC operation as Model 1221

Features

- All digital logic circuitry contained on a single MOS LSI plug-in chip—added reliability
- LED plug-in readout—added reliability
- Instant accuracy—requires no warm-up time
- Requires only 4 sq. in. space
- Complete instrument uses approximately ¾ watt power—conservatively rated to operate in 60°C ambient—added reliability
- Fixed or remote programmed decimal points
- Range change easily accomplished—simplifying stocking requirements
- Input vs readout "slope" changes easily accomplished
- Ruggedized — engineered to meet Military shock and vibration specs. — exceeds requirements of ACA C39.1 specifications for analog panel meters
- Model 1220 weighs less than 4 oz.

SPECIFICATIONS

Full Scale Ranges	
Volts:	**Input Impedance:**
0—100 millivolts	>100 megohms
0—1 volt	>100 megohms
0—10 volts	5 megohms
0—100 volts	5 megohms
0—1000 volts	5 megohms

0—10 microamps	10 K ohms
0—100 microamps	1 K ohms
0—1 milliamp	100 ohms
0—10 milliamps	10 ohms
0—100 milliamps	1 ohm
Accuracy:	±0.1% of reading ±1 digit @ 25°C ±10°C
Overrange:	100% (reads 1999) except on 1000V range (Stated accuracy applies to full overrange.)
Readout:	3½ digits, 7 segment LED
Out-of-Range Indication:	Flashing "1" in most significant digit with blanking of the remaining digits
Operating Temperature Range:	0-60°C (32-140°F)
Temperature Coefficient	±0.01% F.S. ±1 digit (±0.005% reading/°C)
Common Mode Rejection:	Battery operation: >120 dB Line operation: 80 dB
Normal Mode Rejection:	30 dB at 60 Hz
Sampling Rates:	>3 per second
Response Time:	<1.5 seconds
Power Requirements:	**Model 1220:** +5.5 volts DC ±10% (.75 watts) **Model 1221:** 117 volts ±10% or 234 volts ±10% 50 to 400 Hz
Storage Temperature:	—40°C to 70°C
Weight:	Approximately 4 oz

NOTE: Input PC board connectors are not supplied with the DPM. They may be ordered as an accessory under part No. 9790-0273883.

MODEL 1230

WESTON
VOLTS D.C.
-1230

Available in 2½ Digit as Model 1232

Features

- Dual Slope Integration* A/D Converter
- Automatic bipolar operation
- Automatic zeroing
- Reliable TTL Logic and C-MOS analog gates
- 100% overrange (except 1 KV range)
- 2 nA maximum input bias current
- 7.5 conversions per second
- 0.55" Sperry displays
- 80 dB CMRR
- 25 dB NMRR (10 dB on 1 volt range)
- Signal and control terminals:
    - Hold
    - Print Command
    - Outrange
    - Polarity

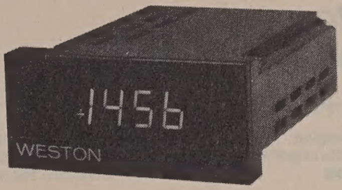
0—10 microamps	10K
0—100 microamps	1K
0—1 milliamp	100 ohms
0—10 milliamps	10 ohms
0—100 milliamps	1 ohm
Accuracy:	1230: ±0.1% of reading ±1 digit 1232: ±0.5% of reading ±1 digit
Overrange:	100% except on 1000V range. Stated accuracy applies to full overrange.
Readout:	7 Segment, Sperry Display
Out-of-Range Indication:	"1" in most significant digit with blanking of the remaining digits.
Operating Temperature Range	0-50°C, (32-122°F)
Temperature coefficient:	±100 PPM/°C
Common Mode Rejection:	80 dB with 1000 ohm unbalance at 60 Hz
Storage Temperature:	—40°C to +70°C
Sampling Rate:	7.5 per second
Response Time:	<1.0 seconds
Power:	117 volts ±10%, 50 Hz to 60 Hz, 4.7 watts. Can be changed to 230 volts ±10% in field.
Weight:	Approximately 13 oz.

Connector supplied as
an accessory under P/N 9790-0267253

2460 SERIES



Features

- LSI Solid-state reliability
- 0.6" High Brightness LED Display
- Noise-immune Dual Slope Integration*
- Floating signal input section
- Choice of single-ended or differential inputs
- Isolated, interactive systems interface
- Latched, parallel BCD outputs
- Industry-standard 1.75" by 4.0" DPM case

SPECIFICATIONS

Resolution	0.05% (1 in 2,000)
Accuracy	±(0.05% Rdg. ± 1 count)
Display	0.6" (15mm) LED; ±1999
Polarity	Automatic Bipolar with sign
Temperature Coefficient:	
of Zero	10 µV/°C max.
of F.S.	100 ppm/°C max.
Series Mode Rejection	30 dB min. (Standard Filter)
Common Mode Rejection	80 dB min. (1 kΩ unbalance)
Signal Integration Time	16.7 mSec (117/234 vac versions) 20 mSec (220/240 vac versions)
Measurement Rate (approx):	
Internal	2/Sec.
External	to 25/Sec.
Isolation Voltage:	
Analog-Digital	200 volts AC/DC
Analog-Power	500 volts AC/DC (1500 optional)
Digital-Power	500 volts AC/DC (1500 optional)
Systems Interface:	
Data Format	8421 BCD (parallel, latched)
Fanout	Per Model Specifications
Hold	via logical 0 or ground
Print (EOC)	Logical 1 pulse @ data update
Ext. Sync.	Logical 1 pulse initiates conversion
Polarity	Logical 1 = positive signal
Outrange	Logical 1 = overload signal

Power Requirements:
Models 2461-2464 – 117/234 or 220/240 vac, 50-400 Hz, 3½W
Models 2465-2466 – 5 VDC ±10% 2W

Operating Ambient	0-50°C, 10-85% R.H.
Storage Ambient	–55 to +85°C, 0-95% R.H.
Weight	13 oz. (370 g) approx.

Model 1234

VOLTS DC
WESTON

Features

- Dual Slope Integration* A/D Converter
- Automatic bipolar operation
- Reliable TTL Logic
- 3 nA maximum input bias current
- 7.5 conversions per second
- 0.55" Sperry displays

Linearity Error	(0.01% rdg. + 0.015% f.s.)
Input Bias Current	3 nanoamperes
A.C. Rejection (NMRR)	40 dB minimum at 60 Hz (standard filter)
Common Mode Rejection	80 dB minimum, 60 Hz and 1000 ohm unbalance
Reading Rate	7.5 per second (15 sec or 30 sec optional)
Step Input Response	2 seconds max. for full scale step
A/D Conversion Method	Dual Slope Integration*
Display Type	0.55" seven-segment gas plasma (±19999)
Operating Temperature	0° to 50°C
Storage Temperature	−40° to +70°C
Temp. Coefficient	(50 ppm rdg. + 0.3 digit) °C
Outrange Indication	Display blanked except MSD "1" and polarity
Control Outputs:	
Hold	Logic "0" retains most recent data
Convert (option)	1 µSec TTL pulse causes conversion within 10mSec
Status Outputs:	
Print Command	Logic "0" signifies valid output data
Polarity	Logic "1" signifies positive input signal
Overrange	Logic "1" signifies signal beyond 19999 counts
BCD Output (option)	1-2-4-8 parallel, TTL DTL (2 u.l.)
Decimal Selection	External, by grounding appropriate terminal
Power Input	117 v. ± 10%, 50-60 Hz. 6 watts (available for 100, 220, or 240 volt line)
Size	Approx. 1.75" x 4.0" x 4.25" (see drawing)
Weight	Approx. 2 pounds (0.9 kg)

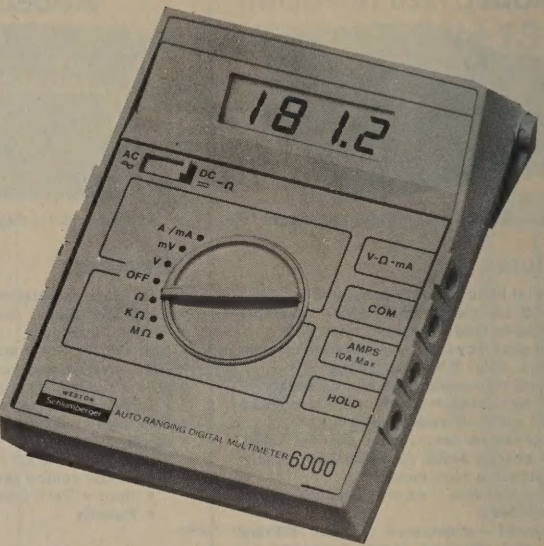
AC/DC Multimeters

Model 6000 *Autoranging* Digital Multimeter



Features

- Autoranging
- Long life Liquid Crystal Display
- Portable
- LSI microcircuitry
- Patented Dual Slope Integration*
- More than 200 hours battery life

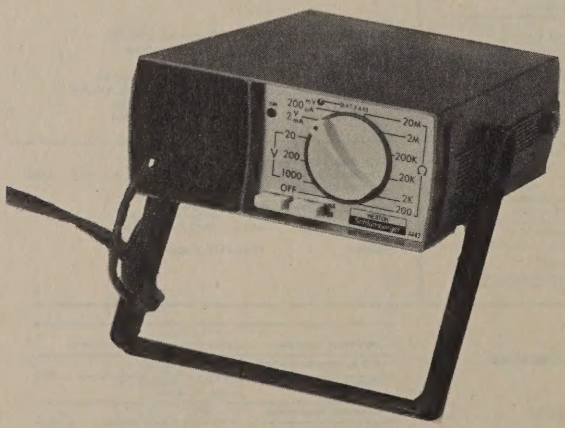
Specifications

Polarity	Automatic bipolar
NMRR (DC only)	66 dB at 50 Hz (20 dB near zero)
Display	1999 with polarity (0.5"/12.7 mm LCD)
Display Hold	SPST contact closure (HOLD to COM) retains reading
Operating Power	Two 9V "transistor" batteries (NEDA 1604, PP3 or RR3)
Battery Life	200 operating hours (350 hours with alkaline batteries)
Low Battery Warning	Valid reading blinks during final 10 hours
Outrange Indication	Blinking "1888" display ("1" and "888" alternate)
Operating Ambient	5°-50°C, 10-85% R.H.
Storage Temperature	−10 to +55°C
A.C. Frequency Influence:	
0-2/20/200 V	Less than 0.25 dB to 16 kHz
0-200 mV, 0-1000 V and current	Less than 0.5 dB to 1000 Hz
Weight	22 oz (625 g) incl. batteries
Size	7" x 5.75" x 2.25" (178 x 146 x 58 mm) overall

Specifications[1]	D.C. Voltage	A.C. Voltage	D.C. Current	A.C. Current	Resistance
Accuracy	0.35% Rdg ± 2d	0.5% Rdg ± 5d[2]	0.75% Rdg ± 3d	1.5% Rdg ± 5d[2]	0.5% Rdg ± 1d[3]
Input Impedance	10 Megohms	9 Megohms//39 pF	10Ω[4]	10Ω[4]	—
Resolution	100 uV	100 uV	1 uA	1 uA	0.1 ohm
Maximum Reading	1000 V	1000 V	10 A	10 A	20 Megohm
Overload Rating	1500 V peak	1000 V (1500 V peak)	1/4A/250 V fuse[4]	1/4A/250 V fuse[4]	250 V (350 V peak)
Temperature Coefficient[5]	250 ppm/°C[6]	600 ppm/°C	300 ppm/°C	750 ppm/°C	600 ppm/°C[3]

Notes: *(1) Specifications guaranteed for 90 days and when operated at 23°C ±5°C*
(2) 40 to 400 Hz; ±2% Rdg ±5d for 0 to 1000 VAC range
(3) ±1% Rdg ±2d and 2000 ppm/°C for 200 ohm range (4) Except 0-2A/10A ranges: 0.01 ohm input, 15A maximum
(5) Offset Tempco 1d/5°C beyond the 23°C ±5°C range (6) Tempco for 1000 V range is 350 ppm/°C max.

MODEL 4442 DIGITAL MULTIMETER



General Specifications

DISPLAY
1999, −1999 (non-blinking) 0.19" character size.
Leading zero blanking — Least significant digit never blanked.
Overrange indication — blinking 1 in thousands place with a polarity and decimal indication. Balance of digits blanked.
Moving decimal point.

BATTERIES
Four "C" size nickel cadmium supplied with meter

CONVERSION RATE
Approximately 4 per second

POLARITY
Automatic

CMRR
80 dB (Approaches ∞ on battery)

NMRR
38 dB

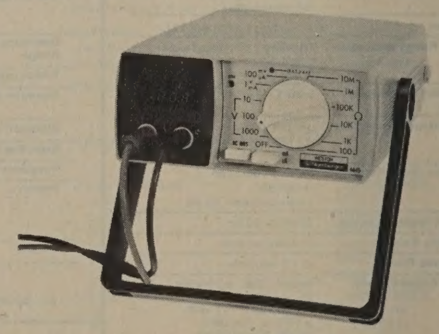
INPUT POWER
Battery operation
Line operation—115 V, 50-400 Hz (All Models)

TEMPERATURE
25°C ± 3°C with guaranteed accuracy (Operable from 0 C to 50 C — derate accuracy)

SIZE
2.25" H x 5.45" W x 7" D

WEIGHT
Less than 2½ pounds

MODEL 4445 RMS DMM AC/DC MULTIMETER



Features:

- True RMS AC measurements.
- 3½ Digit non-blinking LED readout.
- All solid state MOS LSI circuitry.
- Dual Slope conversion for accuracy and long term stability.
- Self-contained battery pack provides up to 10 hours of continuous use.
- 117 Volt battery charger supplied as standard equipment.
- Automatic blanking of digits not in use to conserve battery life.
- Fully-overload protected-fuses externally replaceable.
- Shock-proofed, high impact plastic case.
- Weighs less than 2½ pounds.

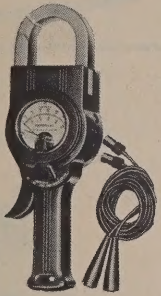
WESTON® Model 633 A-C Clamp Ammeter and Volt Ammeter



Accurate within 3%
Scale Length: 2.36"
Size: 13⅝" x 4⅜" x 2½"— 346 x 111 x 64 mm
Weight: 3¾ lbs.

Outstanding Features:

- Non-Shatterable Glass
- Adjustable Pointer Stop (Model 633 VA-1 only)
- Safety Type Trigger
- Insulated For 750 Volt Service
- Can Be Hung On A Conductor, Leaving Operator's Hands Free
- Accepts Conductors Up to 2" In Diameter

Ranges:

Model 633 Type VA-1 Cat. No. 633-9901001 (Incl. Potential Leads) 1000/250/100/25/10 amperes a-c 700/350/175 volts a-c

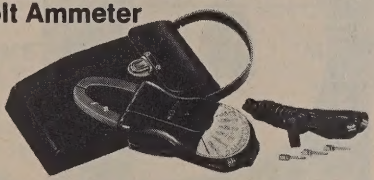
Model 633 Type A-1 Cat. No. 633-2901001 500/250/100/50/25/10 amperes a-c

Model 633 Type A-2 Cat. No. 633-2901002 1000/500/250/100/25/10 amperes a-c

Model 633 Type A-3 Cat. No. 633-2901003 2000/1000/500/250/100/50 amperes a-c

Leather carrying case for types VA2, A1, A2, A3 Model 9959 - P/N 90856

WESTON Model 749 A-C Clamp Volt Ammeter



Accurate with 3%
Scale Length: 2.36"
Size: 7½" x 3" x 1¼"—191 x 77 x 32 mm
Weight: 14 oz.

Outstanding Features:

- Pocket Size
- Precision Ground Faces Provide Positive Jaw Contact
- Shatterproof Wrap-around Plastic Window
- Uses Shock-mounted Core Magnet Mechanism
- Fully Insulated for 750 Volt Services

Plug-in adapter, Model 9886, designed for use with Model 749, facilitates current measurements of double conductor leads without breaking the circuit. Used on direct reading or as a 10-to-1 divider for low current measurements. Simplifies voltage testing during current checks.

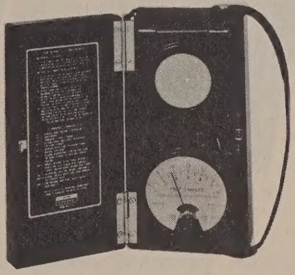
Model 749 (Ind. case, leads, battery, clips, probes)
Cat. No. 749-2901001
300/150/60/30/15/6 amperes a-c
600/300/150 volts a-c

Model 9886 Plug-in adapter—P/N 159983

All meters are stock items. Any other practical range can be supplied.

WESTON®

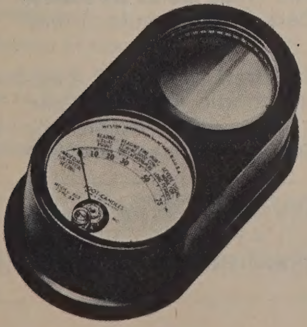
Model 615 Broad Range Light Meter



Features

- Ranges 0-1.2/3/12/30/120/300/1200 Foot Candles
- Viscor and Cosine correction supplied
- More than one year of operation from one 9 volt transistor battery
- Portable—7"x3½"x2½" 2 lbs.
- Light level guidelines in cover

WESTON® Model 703 Illumination Meters



Model 703-0275190, Illumination Meter 0-60 foot-candles (with Viscor and cosine correction filters)

Model 703-996007, Illumination Meter 0-100 foot-candles (with Viscor and cosine correction filters)

Model 703-0275191, Illumination Meter 0-200 foot-candles (with Viscor and cosine correction filters)

Model 703-0275192, Illumination Meter 0-600 foot-candles (with Viscor and cosine correction filters)

Model 703-9960009, Illumination Meter 0-30 foot-candles (with Viscor filter)

Model 703-9960011, Illumination Meter 0-75 foot-candles (with Viscor filter)

Model 703-9960010, Illumination Meter 0-75 foot-candles (with Glass Filter)

Model 703-9960051, Illumination Meter 0-150 foot-candles (with Quartz Filter) for Ultra violet use. Fluorescent characters and pointer on black background scale.

Model 9959-0074472, Leather Carrying Case

Model 9924-0092108, Multiplier Disc (X10) (Not usable with cosine corrected instruments.)

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out...and the response is in...

IMMEDIATE AND OVERWHELMING

ACCEPTANCE

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGI NIE
DER

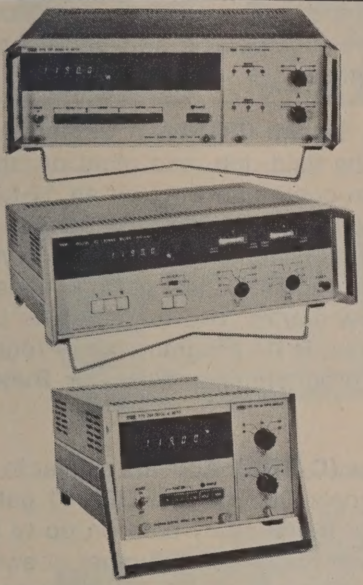
The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. 645 Stewart Avenue, Garden City, New York 11530 / 516 222-2500

YEW Precision Electrical Measurement Instrumentation



PRECISION DIGITAL AC POWER INSTRUMENTATION

YEW's offers a complete line of digital precision low frequency instrumentation for True RMS Volts/Amps and Watts to ±0.01% accuracy.

Model	Accuracy	Range *		Frequency Range	Approx. Price
		V	A		
APR-2	±0.01%	120	5	DC & 60 Hz	$18,000
2885-16 1ϕ, 2W	±0.03%	75/100/ 150/300	0.5/1/2 5/10/20	20 Hz - 10 kHz	$ 4,995

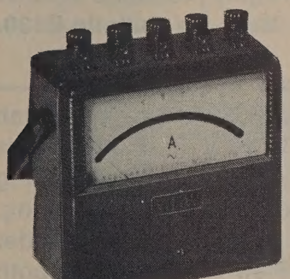
2503-03 3ϕ, 3W	±0.1%	3/10/30/100/ 300/600	0.1/0.5/1/ 3/6/10/30		$ 7,090
2504 1ϕ, 2W	±0.25%	30/60/100/ 150/300	0.5/1/2/ 5/10		$ 2,750
2505 3ϕ, 4W	±0.25%	100/150/ 300/600	2/5/10/20		$ 7,300

* Watt Range — VA at unity power factor.

NOTE: Above instruments useable from 0.0 P.F. to 1.0 (unity) P.F.

Taut-band Precision Portables



YEW is the world's largest and most respected manufacturer of precision, tautband, 0.5% portable instruments.

FEATURES:

- **Full One Year Warranty**
- **Fast and Complete Service Facilities Manned by Factory Personnel**
- **Lowest Prices in the Field**
- **Guaranteed 0.5% Accuracy Traceable to N.B.S.**
- **Tautband Friction-Free Meter Movements**

AMMETERS AND VOLTMETERS

Specifications: DC: Moving Coil, AC: Iron Vane, Accuracy: ±0.5%, Scale Length: 130 mm

Model	Range

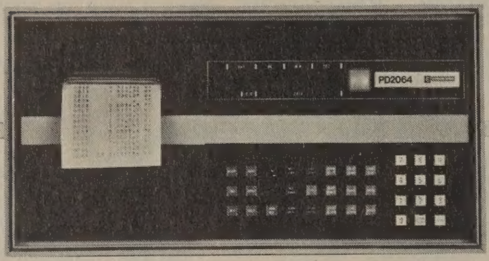
60 Years of Measuring and Recording Instrumentation

Instruments for Data Acquisition, Recording, Controlling

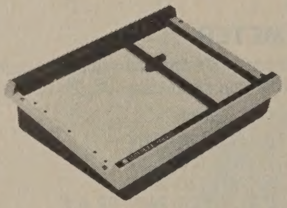
High performance recorders—here now to help you track processes, power, experiments, tests, and pollution. The line includes servo, direct writing and event recorders; miniature recorders; two of the lowest-cost programmable data acquisition systems available; and high performance X-Y recorders. Intertech gas analysis systems and components available for continuous stack, ambient air monitoring, and process control.

ESTERLINE ANGUS
AN ESTERLINE COMPANY

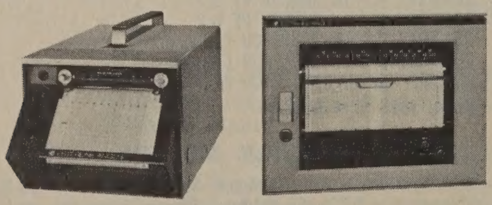


Key-Programmable Data System (PD-2064): Gathers analog and digital data in the field, lab, and plant on up to 248 channels, pushbutton-controlled through an 11-function keyboard and microprocessor setup. Functions in the self-contained system include signal conditioning, crystal controlled clocking, measurement as fast as 25 channels/second, optional high/low alarms, two outputs plus LED display, integration. Special ROM programs and Program Bank available. Simple programming. **Write for Bulletin B110.** Base price $4150.

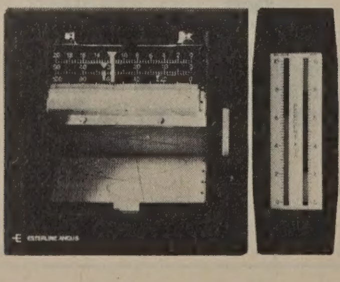
Count/Time Data Systems (C/TDS): Appears similar to the PD-2064, the C/TDS models DE2100 and DE2101 gather production, research, and traffic study data on up to 248 channels. On each channel they record number of switch operations or totalize On-time duration with printed tape and computer-compatible outputs listing performance by channel for the last minute, hour, 8 hours, or month. Key programming through microprocessor makes C/TDS extremely versatile. Optional alarms. Highly protected against the worst electrical environments. **Write for Bulletin B130.** Base price $3450.



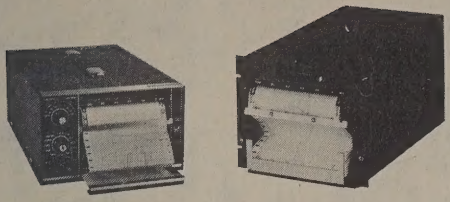
X-Y recorders for every need: Model 530 is for general lab use, with a sensitivity of 1 mV/in to 10 V/in. Model 540 is a two-pen crossover ideal for analytical readout, plotting dependent vs. independent voltages, or statistical plotting. Model 575 is stripped down for OEM applications, or order with add-on multirange module. Slew speed 45 ips both axes. Pen drop repeat rate of 45 cycles/sec. **Write for Bulletin E500.** Prices begin $1035.



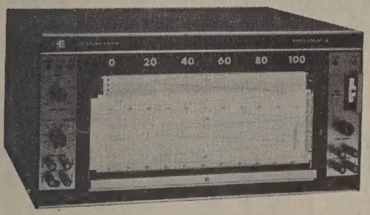
Direct writing recorders: Widest range of direct writing instruments—from 4½″ single channel curvilinear to four 2³⁄₁₆″ channel Rectigraph recorders. Electrodynamometer or permanent magnet moving coil types. To record (generally) mA, A, V, W, Vars, KVA, frequency, pressure, vacuum, speed, position. Electric or spring drives with hr., min., and sec. chart speeds. From $620. **Bulletin C200.**



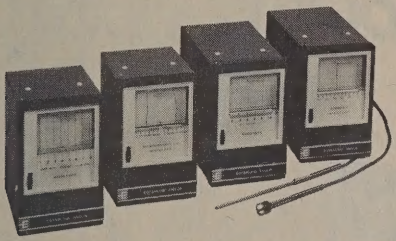
Miniservo® III recorders 1, 2 or 3 pens: 7″ x 7″ panel mounted servo recorder with independent amplifier per channel and built-in transmitter loop power supply ideal for process industry and nuclear power applications. Dependability built in with dither-free conductive plastic feedback pot, miniature DC servo motors and sturdy chart drive motor (fully enclosed and lubed). Options include indicator/annunciator, dual-speed stepper motor drive, two alarms/channel, event pulse to mark event start or stop. **Write for Bulletin F620.** Base price $550.



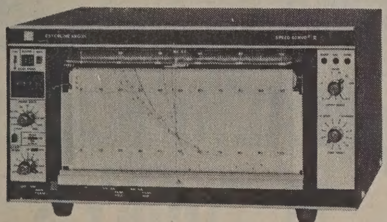
Miniservo® recorders: Basic OEM unit (right) starts at $320. Stock benchmount models include: AC unit S22087-1A at $550. Selectable chart speeds of 6, 12, 24 cm/hr. and 1, 2, 4, 10, 20 cm/min. Selectable input signal ranges of zero to: 1, 5, 10, 50, 100, 500 mV; 1, 5, 10, 50, and 100 V. ± Full scale zero adjust. AC/Battery unit S22243-1A ($795) operates from 8-hour internal 12 V rechargeable battery (included) or switch selectable 120/230 V, 50/60 Hz battery charger or external battery. Same chart speeds, ranges, zero adjust as AC Model S22087-1A. **Bulletins F613, F614.**



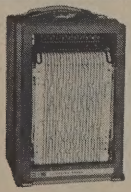
Speed Servo® II recorders: Single pen, two-pen crossover, two-pen side-by-side. 0.3 sec. response, 10″ recorder available fully equipped for versatile lab use or stripped for OEM use. All feature linear servo motor, wireless feedback potentiometer, and disposable writing system or inkless writing system. 2, 5, or 10 chart speed drives; accessible front controls 0.5 mV-100 VDC input spans; E, J, K, R, S and T thermocouple compatible. Alarms. Bench, rack mount or panel mount styles. Prices from $1095.

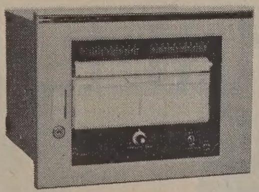


Minigraph recorders: Small low cost analog single channel, two-channel, time share and temperature inkless recorders available in 70 chart speeds. For lab, industry, education. Priced from $115. **Hook-on current transformer:** 50 or 60 Hz, indoor rated (to 750 V), 5-250 amp range dial-set. $190. **Event Minigraphs:** for 4 or 8 channel on/off or yes/no applications. From $131. **Request Bulletins C230, C231, and D330.**

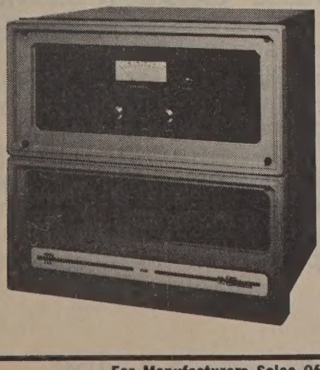


Ink and inkless multipoint: A 24- or 48-point 10″ rotary servo recorder with ink system with 1½ sec. print rate. Slide switch selects points to be deleted or printed. 1 mV minimum span. From $1795. Inkless multipoint recorder thermally brands analog data on up to 24 channels at 1 second print rate on 10″ heat-sensitive chart. Universal input panel accepts millivolt/volt or thermocouple inputs. Options include channel print/skip switches, dual range control, alarms, and time/I.D. recording. From $1725. **Ink Bulletin F600. Inkless Bulletin F720.**





Event recorders: 5, 10, 15, 20 or 40 channels ink or inkless for yes-no, on-off recording of events. 8″ x 8″ flush cases, front switch board or wall mounted cases, too. Electric or spring chart drives with hour, minute and second speeds. Hundreds of varieties possible in A, E, or S Series. Prices from $575.



Intertech gas analysis systems and components: For stack monitoring, process control, and ambient air monitoring. Automatic continuous analysis of parameters: CO, CO$_2$, HC, NO$_X$ and many others. **Write for Bulletin G1300 and application questionnaire.**

THE MASTER CATALOG
THE ELECTRONIC DISTRIBUTORS
'78
MASTER CATALOG
FORMERLY: OFF-THE-SHELF CATALOG
THE ONLY NATIONAL CATALOG OF ELECTRONIC PARTS, INSTRUMENTS AND EQUIPMENT DESIGNED EXCLUSIVELY FOR DISTRIBUTORS AND THEIR CUSTOMERS.

YESTERDAY'S RADIO MASTER IS TODAY'S

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

GOULD/Brush Analog and Digital Recording Systems. The Most complete Line.

GOULD/Brush direct writing recorders produce written records of highest accuracy, trace clarity, crispness and uniformity.

Gould offers a complete selection of general purpose, high performance direct writing and strip chart recorders with many exclusive features.

Most models are available in both portable and rack mounted versions. These quality recorders are ideally suited for industrial and scientific applications that require the highest precision, sensitivity and accuracy.

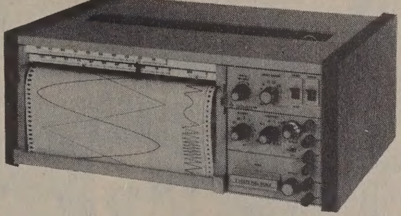
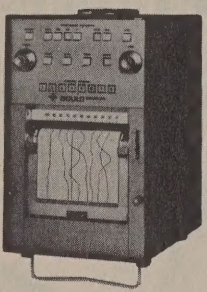
GOULD/Brush 222•2-CHANNEL. Portable battery operated version of Brush 220 recorder. Internal recharger. 30Hz frequency response. Sensitivity 1mV/div. to 500Vf.s.

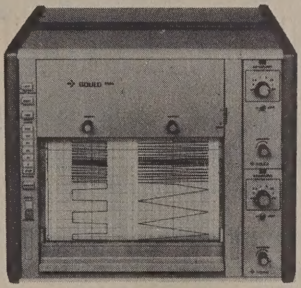


GOULD/Brush 110 STRIP CHART. Most versatile 10-inch recorder. One or two channels; integrator optional. Lifetime thermal pen guarantee. 0.25 sec. f.s. response.

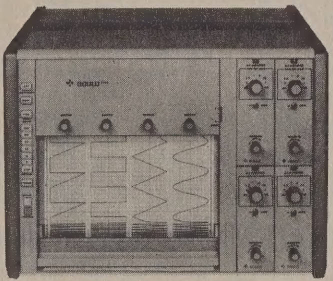


GOULD/Brush 816 • 8-CHANNEL HI-SPEED MULTIPOINT. Data is recorded at a rate 2 sec. / point to 16 points / sec.

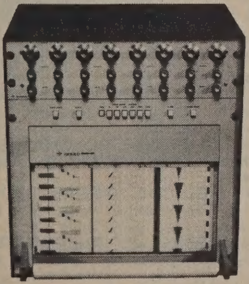
GOULD/Brush 260•6-CHANNEL. High precision and operator conveniences. Built-in preamps. 1mV/div. to 500Vf.s. sensitivity.



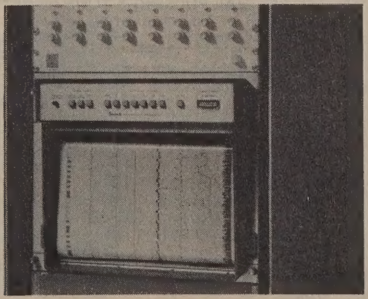
GOULD / Brush 2400 • 2-CHANNEL. Channels are a true 100mm wide. Plug-in preamps. 30Hz frequency response.



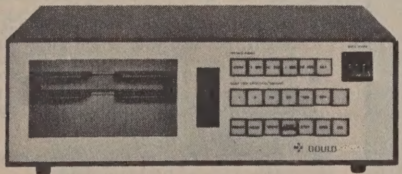
GOULD / Brush 2400 • 4-CHANNEL. 50mm channels, 50Hz frequency response, 99.65% linearity.



GOULD/Brush 481•8-CHANNEL. 1mV/div. to 500 V f.s. sensitity. Model 480 available without preamps.



GOULD/Brush 200•8-CHANNEL. The world's standard for high performance recorders. Tailored to your specific requirements.



GOULD 6100 DATA ACQUISITION SYSTEM. 128 floating and integrating inputs, real time monitoring, 200 points/sec., 3M tape cartridge.

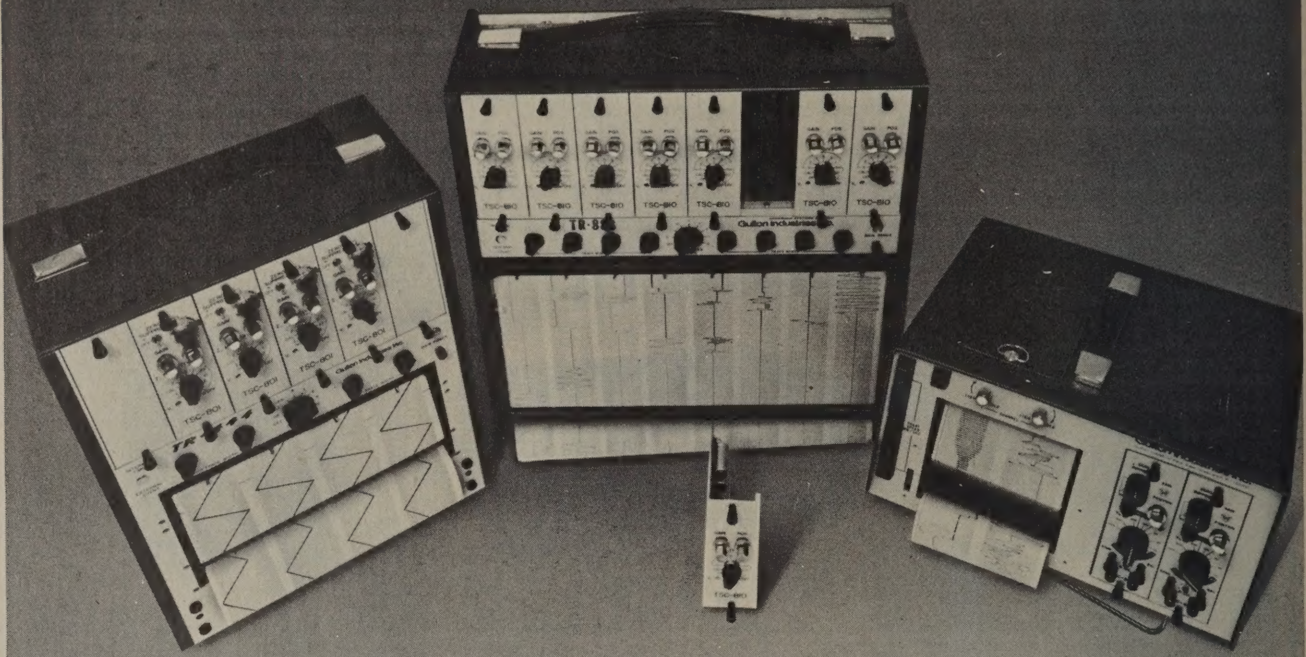
GOULD



2 WEEKS DELIVERY ON PORTABLE MULTICHANNEL RECORDERS

2, 4, 6 and 8 CHANNEL RECORDERS WITH OUR OFF-THE-SHELF PLUG-IN SIGNAL CONDITIONERS . . . THESE ARE THE SMALLEST, LIGHTEST, MOST VERSATILE PORTABLE RECORDERS AVAILABLE

COMPARE THESE FEATURES WITH ANY OTHER RECORDER'S:

- True portability: for example, our 8 channel recorder weighs only 65 lbs. and measures 17½" x 19" x 6". Our 2-channel is only 30 lbs.
- Frequency response: 100 Hz (-3dB) for 2, 4, and 6-channel recorders, 125 Hz (-3dB) for 8-channel recorder.
- Interchangeable signal conditioners provide recording of temperature (thermocouple and thermistor), ac and dc strain, volts, millivolts, microvolts (down to 20 microvolts/div.), ac to dc, frequency to dc, EKG, and log to dc.
- Electrically selectable chart speeds from 0.5 to 100 mm/sec.
- Inkless writing by reliable heated stylus on rectilinear chart paper.

PLUG-IN SIGNAL CONDITIONERS FOR GULTON PORTABLE MULTICHANNELS

- TSC-800 LOW GAIN—Low cost. Single span. 10 mV/div. sensitivity.
- TSC-801 MEDIUM GAIN — 1 mV/div. sensitivity.
- TSC-810 LOW GAIN — 10 mV/div. sensitivity.
- TSC-820 HIGH GAIN — 10 uV/div. sensitivity. For use with strain gage transducers.
- TSC-510 AC STRAIN — 5 uV RMS/div. For use with strain gages, LVDT's, and variable reluctance transducers. Toggle switch permits bypass of signal conditioning circuitry.
- TSC-500 J, T, K or E — Preamps with thermocouple compensation.
- TSC-811 CURRENT TO DC — Monitor currents from 1 to 20 m/A. Four ranges.
- TSC-815 DIAL PULSING & TONE BURST MONITOR — For monitoring telephone communications.
- TSC-822 HIGH GAIN — Same as TSC-820, except without DC excitation.
- TSC-823 HIGH/LOW GAIN — Two ranges: 5uV/div. to 500 uV/div. and 5 mV/div. to 500 mV/div. Zero suppression.
- TSC-830 FREQUENCY TO DC CONVERTER — Input frequency range 10 Hz to 20 KHz.
- TSC-831 FREQUENCY TO DC CONVERTER — Same as TSC-830, but with f.s. range suppression and 10X scale expansion.
- TSC-840 AC TO DC CONVERTER — 50 Hz to 100 kHz range. Inputs to 250 VRMS.
- TSC-840A AC TO DC CONVERTER — 50 Hz to 100 kHz range. Inputs to 1000 VRMS.
- TSC-841 AC TO DC CONVERTER — 100A to 1000A. Use with clamp-on current transformer.
- TSC-843 COMMUNICATIONS PREAMP — Converts AC to log. Records DC signals up to 100 Hz.
- TSC-850 EKG SIGNAL CONDITIONER —For research and laboratory diagnostic use.
- TSC-870 MEDICAL THERMISTOR PROBE — Temperature range 50° to 113°F.
- TSC-871 INDUSTRIAL THERMISTOR PROBE — Temperature range 0° to 100°C.
- TSC-880 LOG TO DC — Range −80 dB to +40 dB over 50 Hz to 100 kHz.

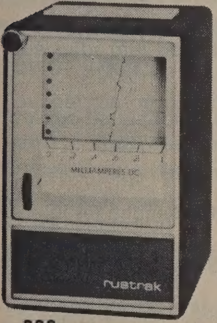
Rustrak Miniature Chart Recorders

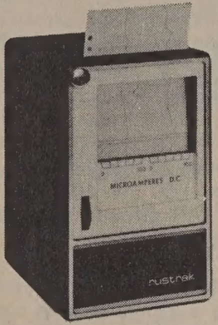
Rustrak miniature chart recorders generally measure 5-5/8″ high x 3-5/8″ wide x 4-1/8″ deep, and offer a wide range of sensitivities, writing and chart speeds. Accuracy is typically ±2% of full scale and response time is 0.8 to 1.0 seconds. The recorders operate in both chart rewind and tear-off modes. Chart width of single channel recorders is 2-5/16″, dual channels 1″ each.

Single Channel DC Recorder.

Basic recoruer in the Rustrak line. Ranges from 0-10 microamperes to 0-5 amperes DC; 0-10 millivolts to 0-500 VDC. Multipliers and shunts available. Chart speeds 1/32″ to 480″ per hour. Many available options, features and accessories. AC models also available.



288



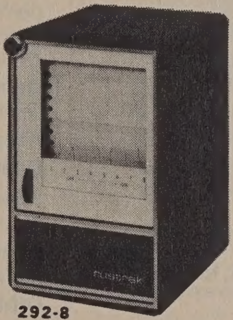
291

Dual Channel DC Recorder

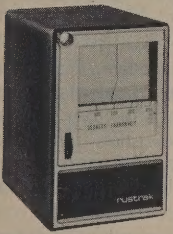
Same as basic Model 288 except dual channel with two galvanometers. Available in combinations of current and voltage or different ranges each channel. Usable chart width, 1″ per channel. AC models also available.

Event Recorders, 4, 8, 16, 24 Channels

Record worktime; productivity of machines and personnel; provide data for time study, cost analysis, security control. Chart speeds to 50 inches per minute with definition of up to 16 events per second.



292-8

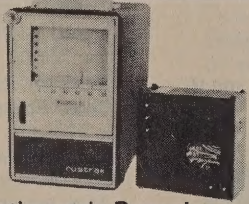


2122

Temperature Recorders.

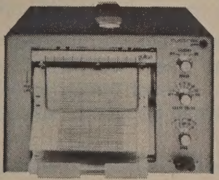
Wide variety of temperature recorders using thermocouples, thermistors or nickel wire sensors. Ranges from −100° F. to +2400° F. and custom spans as narrow as 25° F. Also available in °C. and in single or dual channels.

400



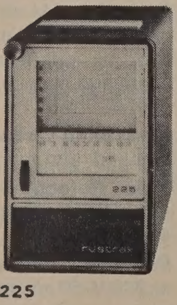
Potentiometric Recorder.

100 mV direct writing recorder offers 1 megohm input impedance and solid-state amplifier. Series of plug-in modules available for increased sensitivity to 1 mV full-scale. Other plug-ins with cold junction compensation and for special applications.



4″ Servo Recorders

OEM and lab models. More features and options than any recorder in its price class. Choose from 49 plug-in range cards to record temperature, dc volts, dc current. Tearoff, reroll or z-fold chart styles. High/low solid state alarm contacts and event pen optional.



225

RH/TEMP Recorder

Electronically monitors relative humidity from 10% to 90% and temperature from 60° to 90°F on a single chart. Chart lasts 2 months, continuous operation. No ink to add or messy cartridges to change. Sensors included. Ideal for computer room, clean rooms, or offices.

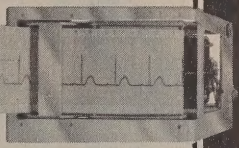
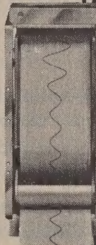
Gulton OEM Recorder Building Blocks

Models available in 1,2,3,4,6 and 8 channels...full alphanumeric thermal printing available... extremely sturdy, long life ceramic stylus optionally available ...frequency response up to 140 Hz (-3dB).



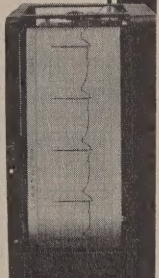
MED-102
Select exactly the package you want…from basic module without amplifier/power supply and transformer to full alphanumeric printout capabiltity. Frequency response is 140 Hz (-3dB). MED-100 version meets AHA and UL 544.

MED-110
Slide mounted unit has horizontal transport and internal rewind. Offers full alphanumeric printing. Less amplifier power supply and transformer.



MED-120 DC
Low power consumption for portable battery operation. Miniature size, only 3″ w x 5½″ h x 4½″ d.

Mark 3
Records analog data while printing alphanumeric data in chart margin. Frequency response is 100 Hz (-3dB). Large chart viewing area. Minimum depth requirement.



Multichannel Building Blocks
Standard units available are 2,3,4,6 and 8 channel configurations. Basic design adaptable to many individual requirements.

There are many more recorder models available. Custom variations on any particular model easily accomplished. Call or write now for comprehensive data.

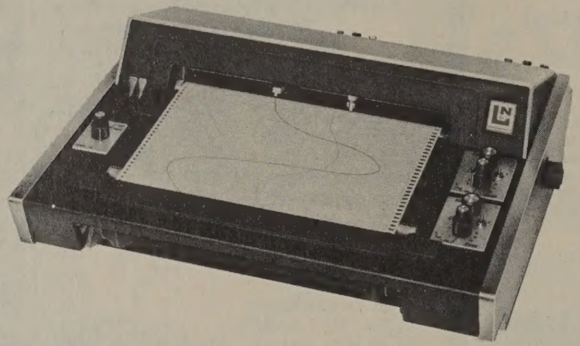
Lab Recorders with the performance, versatility and reliability you've come to expect from Leeds & Northrup



Speedomax XL 625-Series Flat-Bed Lab Recorder

A broad selection of convenience features in a flat-bed lab recorder

- **All-solid-state shielded circuitry, including F.E.T. low-level input circuit**
- **0.5 second span-step-response time**
- **Single- or two-channel models**
- **Interchangeable fixed, dual-fixed, or AZAR® (adjustable-zero, adjustable-range) ranges**
- **AZAR range continuously adjustable from 400 μV to 100 V**
- **All ranges feature continuous uncalibrated zero adjustment, ±100% of span**
- **Exclusive automatic gain and damping for all ranges**
- **Easy range-change with plug-in range modules**
- **Convenient rear-mounted quick-disconnect 5-way input terminals, and terminal board connections for remote operations**
- **Conductive-plastic linear "slidewire" with infinite resolution, optimum performance**
- **Drop-in chart replacement and chart reroll**
- **Tearoff bar is standard; positive chart feedout if reroll is not used**
- **Single, dual or multiple (6 or 10) chart speeds**
- **Metric or English calibration and exact chart drive, readily convertible**
- **Zero-left or zero-right calibration of span and chart**
- **Stable mounting on shelf or lab table only 12" deep**
- **Disposable marker pen system for simple, clean, instant-start recording**
- **Separate mechanical pen lifters standard; electrical pen lifters optional; electrically-actuated event pen optional**

Specifications

(Specs meet or exceed performance requirements of ANSI Spec. C39.4-1966)

Measuring Circuit—D-c potentiometer, with F.E.T. low-level input circuit, for each channel; potentiometric up to 5 V and voltage-divider network (2.5 megohms, fixed) above 5 V.

Record—One- or two-channel, with independent pen systems. Record can be zero-left (standard) or zero-right (reversed-polarity option).

Range Spans—Fixed Spans: 1 millivolt to 100 volts. (Note: When specified for any span less than 50 mV, the recorder is supplied with a plug-in low-level preamplifier.) Dual Spans: Switch selection of either of two fixed emf spans within three categories: 1-50 mV; 100 mV-5V; and 10 V-100 V. Adjustable Spans: AZAR circuits available to provide (a) 16 switch-selected spans from 1 mV to 100 V, or (b) 10 spans from 100 mV to 100 V. AZAR circuits include a continuously adjustable uncalibrated vernier to provide a maximum 2.5:1 "span-down," permitting a minimum span of 400 μV. Both fixed and AZAR spans are also provided with an uncalibrated zero adjustable to ±100% of span.

Gain and Damping Adjustments—Preset: do not require resetting with a span change.

Accuracy Rating—±0.25% of span.

Deadband—0.1% of electrical span.

Span Step-Response-Time Rating—0.5 second for full-scale response.

Source Impedance Rating—Up to 25,000 ohms on all spans for rated response.

Off-Balance Input Impedance—3.5 megohms for spans $\leq$5 V; 2.5 megohms for spans $>$5 V.

Chart—English: Standard Speedomax W chart, 9⅞" in calibrated width, fractional-inch horizontal spacing, 30 yards per roll. Metric: Chart is 250 mm in calibrated width, with metric horizontal spacing, 27 meters per roll.

Chart Speed—Many listed single speeds, ranging from 1 in/hr to 720 in/hr, or 3 cm/hr to 1800 cm/hr; or switch-selected combination of two speeds. Rotary switch selection from standard six-speed combinations or rotary-switch selection from a standard ten-speed combination. For remote start/stop of chart drive, a recessed female receptacle (two-blade) is mounted at the rear of the recorder.

Recording Pens—Standard pens are disposable marker type.

Event Pens—An electrically-actuated event pen is optional. Connections are brought to the terminal board on the rear for remote actuation.

Pen Lifter—Mechanical type; separate lifter for each recorder pen. The optional event pen has a separate lifter. Electric pen lifter, for independent operation of each recorder pen, is optional and may be remotely operated from terminal connections at rear.

Measuring-Circuit Current Source—Supplied by an a-c line, rectified, and regulated by precision Zener-diode circuit.

Noise Rejection—Common Mode: At line frequency or d-c, 80 dB or 100 V, whichever is less. Normal Mode: At line frequency, 40 dB.

Power Requirements—Operates on 120 V, 60 Hz, or 120, 220 or 240 V, 50 Hz, as specified.

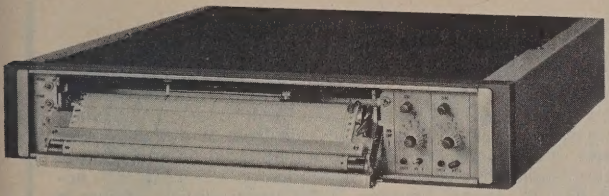
Power Consumption—Single-channel: 20 VA. Two-channel: 35 VA.

Case Dimensions—16⅝" deep by 18" wide by 7" high (422 × 457 × 178 mm). Base is designed so recorder will sit on a shelf or lab table 12" deep (305 mm).

Weight—Single-channel: 28 lb (12.7 kg); two-channel: 30 lb (13.6 kg).

LEEDS & NORTHRUP

North Wales, Pa. 19454
Attn: MD 337-K
(215) 643-2000



Speedomax XL630-Series Lab/Test Recorder

Provides one or two pen 10″ wide recording in only 3½″ of vertical panel space.

- **Unique Maxi-View™ chart drive feature provides "instant replay" of previous records**
- **10″ wide recording in only 3½″ of vertical panel space**
- **Disposable markers standard . . . thermal marking system optional**
- **One or two full scale, cross-over pens . . . English or metric calibration**
- **Lever-operated manual chart advance**
- **Single, dual or adjustable-zero, adjustable spans**
- **Wide selection of ranges**
- **Mechanical pen lifters standard . . . electrical lifters optional**
- **Meets ANSI C39.4-1966 Performance Standard and ANSI C39.5 (Proposed Safety Standard)**
- **Bench, rack or panel mount**
- **Electronic Off-Scale limit protection**

Specifications

Recorder meets or exceeds specifications listed in ANSI Standard Specifications for Automatic Null-Balancing Electrical Measuring Instruments C39.4-1966 and ANSI C39.5 (Proposed Safety Standard).

Measuring Circuit—D-c potentiometer.

Record—One or two channels with independent disposable markers. Thermal marking system optionally available for single-channel recorder.

Range Spans—Emf spans provided by interchangeable plug-in modules.

Fixed Spans—1 mV to 100 V d-c.

Adjustable Spans—(1) Low-Level AZAR (Adjustable Zero, Adjustable Range) Circuit provides selection of 1, 2, 5, 10, 20, 50 mV and 0.1, 0.2, 0.5, 1, 2, 5, 10, 20, 50, and 100 V d-c. (2) High-Level AZAR Circuit provides selection of 0.1, 0.2, 0.5, 1, 2, 5, 10, 20, 50, and 100 V d-c. Both AZAR circuits contain a continuously adjustable uncalibrated vernier between fixed span steps to provide a 2.5:1 span turndown. All spans are provided with an uncalibrated ±100% zero adjustment.

Accuracy—±0.25% of span.

Dead Band—≤0.1% of span.

Span Step-Response-Time—0.5 second for full scale response.

Source Impedance—≤25,000 ohms.

Off-Balance Input Impedance—Spans up to 100 mV: from 3.5 megohms at 1 Hz to 0.2 megohm at 40 Hz and above; Span 0.1 to 5 V: 3.5 megohms; Spans over 5 V: 2.5 megohms.

Balance Input Impedance—Spans up to 5 V: 30 megohms; Spans over 5 V: 2.5 megohms.

Common Mode Rejection—Greater than 80 dB at full source impedance.

Normal Mode Rejection—Greater than 40 dB at line frequency.

Power Requirements—Operates on 120 volts, 60 Hz or on 120, 220, or 240 volts, 50 Hz as specified.

Power Consumption—One Channel: 20 volt-amperes
Two Channels: 35 volt-amperes

Chart—9⅞ inches (250 millimeters) in calibrated width and 30 yards (about 27 meters) long.

Chart Speeds—Single or switch selection of two speeds (1 to 720 in/hr or 3 to 1800 cm/hr). Mechanical ten-speed changer (0.5 to 3600 in/hr or 1 to 7200 cm/hr). Electronic ten-speed changer (1 to 360 in/hr or 6 to 720 cm/hr).

Pen Lifters—Mechanical type. Solenoid operated type optionally available.

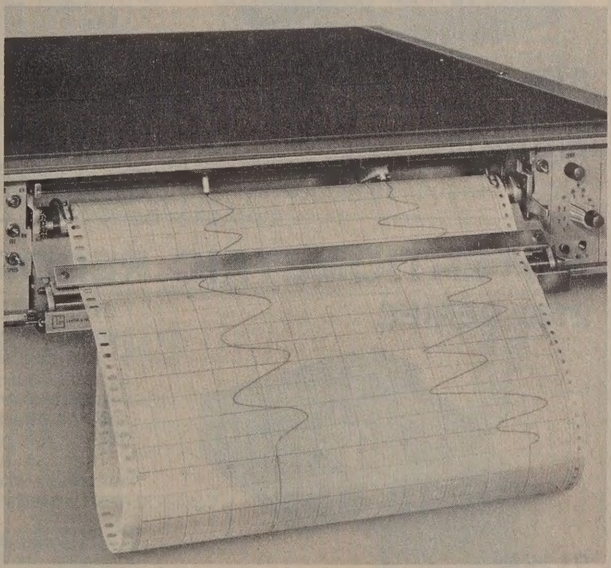
Event Marker—Optionally available for X1 channel only; equipped with disposable marker or thermal marking system.

Scale—An optional scale with pointers can be supplied.

Case—Designed for panel, cabinet-type relay rack, telephone-type relay rack, or bench mounting. Chassis of panel, cabinet-type relay rack, or telephone-type relay rack recorder supported on drawer-type slides; bench-type recorder supported on four feet.

Dimensions—Panel, cabinet-type relay rack, or telephone-type relay rack recorders: 3½″ high by 19″ wide by 19½″ deep behind panel (89 mm × 483 mm × 495 mm). Bench type recorders: 4″ high by 19″ wide by 21¾″ deep (102 mm × 483 mm × 552 mm).

Weight—One-pen models, 27 lb (12.3 kg) and two-pen models, 37 lb (16.8 kg).



SIMPLE RECORD REVIEW Push a lever and unroll your chart for an "instant replay" review of previous record . . . then push and automatically rewind . . . all without stopping the regular chart drive. This unique feature gives you the chart visibility of "free fall" operation even when the chart is operated in the reroll mode.

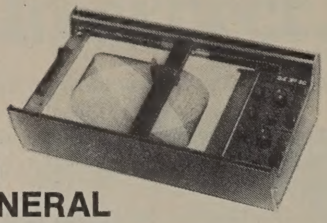
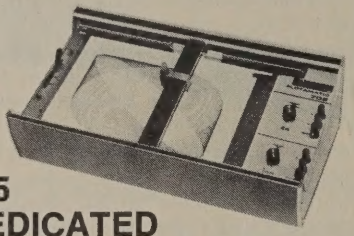
X-Y PLOTAMATIC RECORDERS

700 SERIES 8½" x 11" (DIN. A4)



715 GENERAL PURPOSE



705 DEDICATED OEM

700 SERIES RECORDERS WITH PAD/LOAD®

The 700 Series recorders, while low in cost, still meet or exceed the performance specifications of many higher priced recorders. The new "PAD/LOAD®" paper handling system, operates three times faster than those available on conventional single sheet machines. A 50-sheet pad of paper is loaded into the recorder, and as each page is consumed, the operator simply tears off the used sheet, exposing a new sheet.

All 700 Series PLOTAMATICS have • I/C circuitry • No mechanical or photo choppers • Clean fibre-tip pens • Electronic over-drive protection • Operate from 50-400 Hz power • Buffered feedback potentiometers for noise immunity • ±0.2% F.S. accuracy • Differential guarded inputs with 140 db CMR • Constant 1 meg input impedance • No servo gain adjustments.

MODEL NO.		APPLICATION	RANGE	SLEWING SPEED

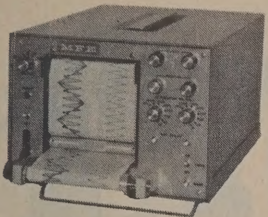
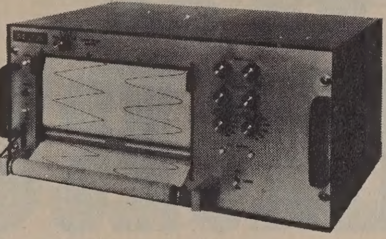
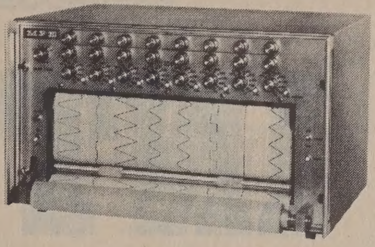
STRIP CHART RECORDERS

PORTABLE/RACK MOUNT RECORDING SYSTEMS







MFE portable or rack mount single and multi-channel recording systems are completely self-contained lightweight instruments. Features include • inkless heated stylus writing • solid state design • 40 Hz full scale bandwidth • wide channels • dc to 100 Hz (-3 db) 10 mm pp • 7 step attenuators • multiple chart speeds • 10 mv/mm sensitivity or optional 1 mv/mm.

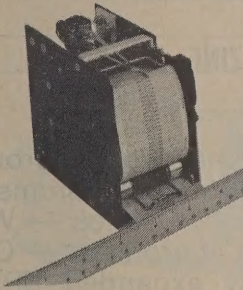
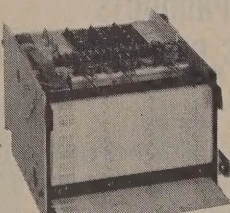
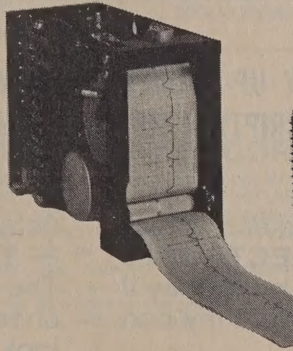
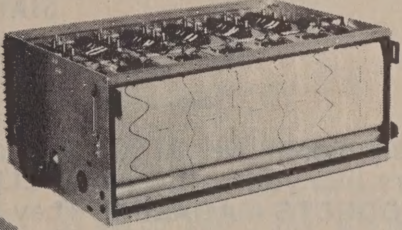
OEM RECORDER MODULES







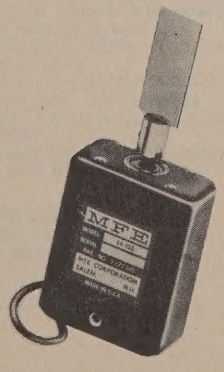


MFE single through 8 channel thermal writing recorder modules are designed for maximum flexibility. The basic transport is equipped with the MFE moving iron pen motor(s), chart drive motor(s), stylus heat power supply and control potentiometer, for each channel and front loading paper supply and drive mechanism. To the basic module are added MFE plug-in solid state drive amplifiers, power supplies and accessory equipment: event marker(s), paper take-up, front panel, and portable case. Modules are available with 40, 50, 80, or 100 mm-wide channels. Main power options include: 100, 117, 220, 230, 240V; 50 or 60 Hz, or 12 Vdc. Also available: thermal edge printing, single or multiple line, velocity feedback and position feedback recorders, and UL 544 listed recorders.

SCANNING AND TORQUE MOTORS

MFE's Scanning/Torque Motors are an adaptation of the basic moving iron principle which accomplishes the transition from electrical signal to mechanical force or position in a highly efficient manner. These devices produce an output torque proportional to input current over ±15° of motion.* 20 basic models offer a wide range of size, price, and performance characteristics.

- MOVING IRON PRINCIPLE
- HIGH RELIABILITY
- ±15° DEFLECTION
- LONG LIFE
- HIGH FREQUENCY RESPONSE
- RUGGED, COMPACT
- LINEAR OR TANGENT CORRECTED
- LOW POWER INPUT
- VALUE PRICED



REFER TO SCANNING AND MOTOR SECTION FOR COMPLETE MFG. LISTING

---

*The S4 Series of Optical Scanning Motors includes bearingless single frequency resonant systems designed to operate from 200 to 2000 Hz, as well as scanners complete with velocity feedback and position feedback transducers.

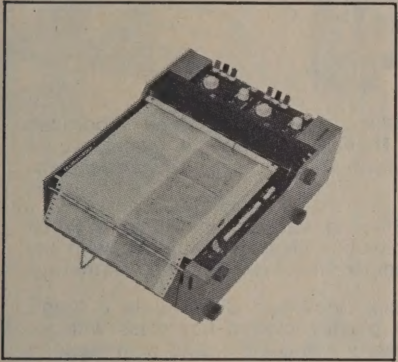
YEW Oscillographs & Recorders



3050 SERIES FLAT BED RECORDERS

The Model 3050 is a plug-in type single and dual pen strip chart recorder with a self-balancing potentiometric mechanism. A wide selection of plug-in modules make this recorder particularly suited for a variety of applications. Exceptionally well shielded and guarded input circuits provide a high degree of noise immunity so extremely stable recordings are assured.

Recorder functions can be further expanded through such options as remote control of chart speed, bi-directional paper feeding, remote control of pen lift, re-transmitting slide wire, alarm circuits, time markers, etc.

SPECIFICATIONS

Channels: Single (3051) or dual pen (3052)
Chart: 250 mm Z-Fold or Roll
Writing: Ink or Electrostatic
Chart Drive: 60cm/min. to 2cm/hr. in 8 ranges
Plug-ins: Modular input units indicated below
Input Impedance: 2 megohms max.

Plug-in Modules

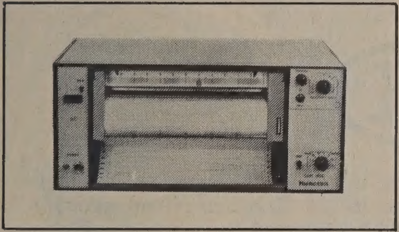
3053-11: DC 0.5mV to 5V/cm (13 ranges)
3053-12: DC 25μV to 5V/cm (17 ranges)
3053-13: DC 5μV to 5V/cm (9 ranges)
3053-31: AC 2.5/5/10V/cm (3 ranges)
3053-41: DC OFF-SET UNIT
3053-21: Single range
3053-22: Single range

Price:

3051: Start @ $920.00, 3052: Start @ $1,364.00, Plug-in modules: Start @ $105.00

Precision Temperature Measurement Modules for 3050 Series Recorders

3053-55: −50°C to 110°C
3053-56: 0°C to 1,200°C (CA)
3053-57: −200°C to 300°C (CC)
3053-59: ±60mV (CA, CC, PR, CRC & IC)



3040 SERIES LABORATORY RECORDER

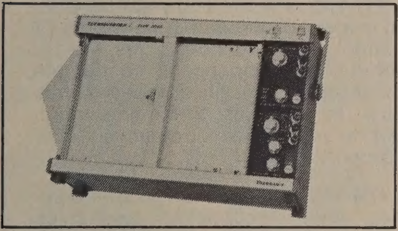
The 3040 Series Laboratory Recorders are selfbalancing potentiometric recorders with either a single pen or dual pens. It uses a high-frequency modulated DC amplifier for high noise rejection and stable recording. These recorders have a maximum sensitivity of 200μV/200mm and an accuracy of ±0.3%.

SPECIFICATIONS

Accuracy: ±0.3%
Chart: 250mm (10") wide, 15m (45 feet) long z-fold chart used.
Input range: 0.5mV to 100V/200mm (17 ranges)

Price:

3046 (single pen): $995.00
3047 (dual pen): $1,575.00



3083 SERIES X-Y RECORDER

The Model 3083 is a plug-in type single pen X-Y recorder with an 8½ x 11" chart (DIN and JIS Size A-4). Both rool chart and sheet are available. With the optional Paper Take-Up Unit, this X-Y Recorder may be used as a continuous recording strip chart recorder. The pen holder supplied permits the use of a standard commercial felt-tip pen, ball-point pen or pencil in addition to the unit's ink writing system.

SPECIFICATIONS

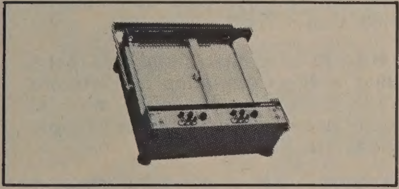
Accuracy: ±0.3%
Pen speed: Approx. 0.7 seconds for 200mm

Plug-in-modules

Interchangeable with plug-ins for 3050 series Flat Bed Recorder except 3053-42 Time Base Unit with DC ranges of 0.5mV to 5V/cm (10 ranges) 3085 Paper Take-Up Unit

Price

3083: $1,253.00, Plug-ins: Start @ $105.00



3070 SERIES X-Y RECORDER

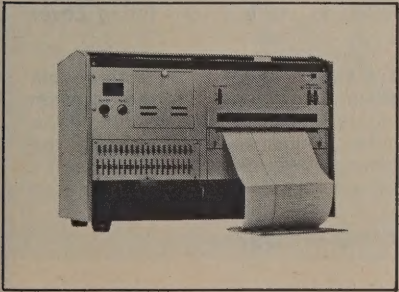
The Models 3077 and 3078 are single pen and dual pen X-Y Recorders respectively with a DC servo system. DC measuring ranges are from 100 μV to 10V/cm (16 ranges) for applications requiring wide ranges. A time base is built-in as standard. Common mode rejection is high 160 dB at DC and 140dB at 60Hz. Desk-top, portable and rack mounting are available.

SPECIFICATIONS

Accuracy: ±0.3%
Recording area: 250 x 250 mm (10" x 10")
Pen speed: Approx. 1 second for full scale.
Input impedance: 1 MΩ constant

Price:

3077: $1,843.00 (1 pen)
3078: $2,622.00 (2 pen)



2900 SERIES LIGHT BEAM OSCILLOGRAPH

This series consists of photographic recorders which use light sensitive paper. Since these units respond to very high frequencies they are most suitable for recording waveforms which change at very high speeds. Three models, 6-channel, 9-channel and 18-channel, are available. The long optical arm (450mm) which is common to all models, provides high-accuracy recordings with minimum arc distortion.

SPECIFICATIONS

Model: Type 2901 6 channels, portable
Type 2924 9 channels, desk-top or rack mount available
Type 2925 18 channels, desk-top or rack mount available
Frequency: DC to 3,500Hz, depending on galvanometers used
Sensitivity: Approx. 3.3 μA/mm to 2.8mmA/mm, depending on galvanometers used.
Recording width: 127mm for 2901, 178mm for 2924 and 2925
Light source: High tension mercury arc lamp
Paper speed: Up to 200mm per second

Price:

2901: $2,248.00, 2924: $2,809.00
2925: $3,456.00, 2916 Galvanometers: Start @ $83.00

Insulating Tubings and Sleevings— High Temperature Wire and Cable

ELECTRICAL INSULATING SLEEVINGS

HYGRADE®

HYGRADE Polytube 463 Class F Flexible Fiberglass Sleeving is an acrylic-coated material especially compatible with the wire enamels used in motors and transformers.

HYGRADE Thermoflex 1200 Class C Flexible Fiberglass Sleeving is made of 100% tightly braided fiberglass. For use at continuous temperatures as high as 1200°F. (UL FR-1)

HYGRADE Thermoflex 500 Class C Flexible Fiberglass Sleeving is made of tightly braided and pigmented fiberglass. For continuous operating temperatures to 500°F. (UL FR-1)

HYGRADE SR-398 Silicone Rubber Coated Fiberglass Sleeving is a Class H material made of closely-woven glass braid, coated with highly abrasion-resistant silicone rubber. (UL FR-1)

HYGRADE SV-862 Silicone Varnish Impregnated Fiberglass Sleeving is a flexible Class H insulation with unusual resistance to temperature extremes and weathering.

HYGRADE VF Flexible Fiberglass Sleeving is a tough, Class B insulation of plastic-covered fiberglass with excellent electrical resistance, flexibility, and heat stability. (UL FR-1)

ELECTRICAL GRADE PLASTIC TUBINGS

FLEXITE®

FLEXITE TEFLON* TFE Extruded Tubing offers unequaled quality, performance and stability over the widest temperature range of any flexible insulation (−70°C to +260°C). Its unique characteristics are superb electrical properties, unmatched chemical resistance, zero moisture absorption, non-corrosive to all metals, completely inert to fungi, and excellent anti-stick properties—having the lowest coefficient of friction of any solid material. With nearly infinite life under normal operating conditions, Teflon TFE is the ultimate space age insulating material.

FLEXITE TEFLON* FEP Extruded Tubing is a fluorocarbon material that combines long-term reliability (matched only by TFE) with chemical inertness, flexibility, superb electrical characteristics and a useful continuous operating temperature range of −70°C to +200°C.

FLEXITE SR-200 Silicone Rubber Extruded Tubing is made of an extremely elastic compound, and is excellent for high voltage applications at Class H temperatures to −70°C.

FLEXITE HT-105C Extruded Vinyl Tubing is UL recognized for continuous use at 105°C. It is a strong, very flexible tubing for many applications. (UL FR-1) (CSA)

FLEXITE E Extruded Vinyl Tubing is an extremely flexible tubing designed primarily for low temperature applications (to −68°C), as in aeronautical instrumentation.

FLEXITE Shrinkdown HT-105 is a flexible material made in expanded sizes to shrink 50% with 110°C heating; has outstanding electrical and mechanical properties (UL FR-1)

FLEXITE Shrinkdown LM-145 is a very flexible modified polyolefin tubing that will shrink 50% with 120°C heating and conform closely to the object it covers. It is suitable for use at temperatures to 135°C; has excellent mechanical strength and abrasion resistance.

FLEXITE Shrinkdown PO-135 is a thermally-stable Class B (130°C) crosslinked material extruded from specially-formulated polymers. Supplied in expanded sizes, PO-135 may easily be assembled over components, connectors, cables, or other irregular shapes. When exposed to heat (150°C), it shrinks 50% in diameter, forming a tough, smooth insulating covering with excellent chemical, electrical and oil resistant properties. (UL FR-1)

FLEXITE Shrinkdown HM-140 is a heat shrinkable semi-rigid polyolefin tubing with exceptional mechanical strength and electrical properties. It has outstanding chemical resistance and may be operated continuously at temperatures from −55°C to +175°C.

FLEXITE Shrinkdown HA-150 is a heat shrinkable polyvinylidene fluoride tubing with an operating temperature range of −55°C to +175°C. It is a very tough material with high resistance to abrasion and cut through suitable for strain relief applications. (UL FR-1)

FLEXITE Shrinkdown TE-250 is a heat shrinkable Class C tubing with the unique properties of Teflon, plus the ability to shrink upon heating to make a form-fitting cover over shapes.

FLEXITE SPIRAL-CUT CABLE WRAP is an expandable plastic wrap for harnessing, insulating, and the abrasion protection of wires, tubing lines, cables, or bundles in diameters up to four inches. Quick and easy to apply, the cable wrap provides openings through which leads can be broken out at any point, yet creates a firm, homogeneous

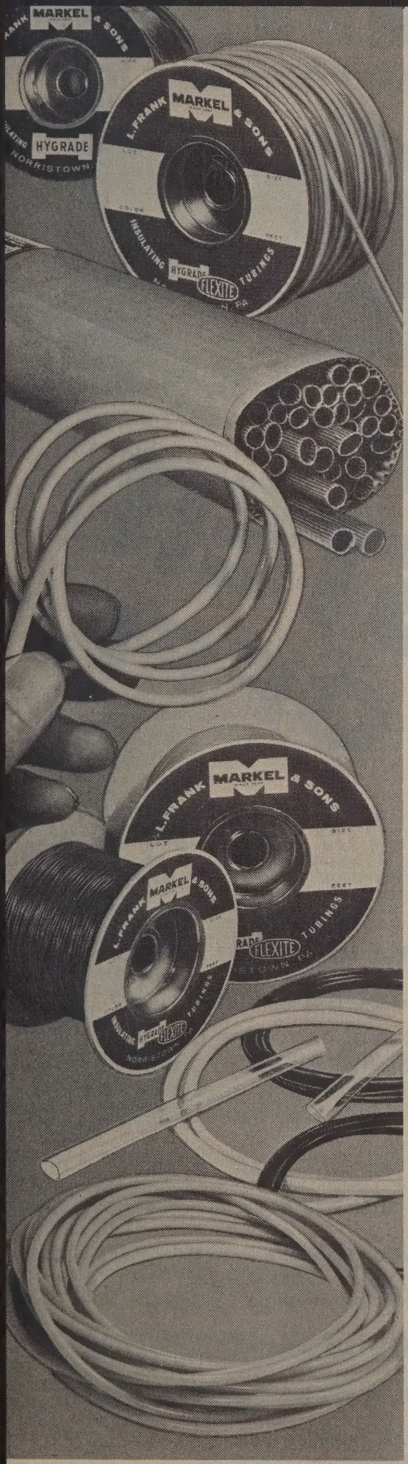
*DuPont Trademark

MARKEL CORPORATION

Insulating Tubings and Sleevings— High Temperature Wire and Cable



harness assembly which can be channeled, bent or flexed without danger of cut-through. Manufactured in five different materials to meet a wide variety of requirements over a temperature range from −100°C to +260°C.

FLUID AND MECHANICAL GRADE PLASTIC TUBINGS

FLEXTECH®

FLEXTECH AR-400 Abrasion-Resistant Tubing is extruded from a Markel patented composition of reinforced Teflon and exhibits abrasion resistance many times greater than conventional Teflon tubings. It also offers good antistick properties, chemical inertness, high and low temperature stability, and meets the electrical requirements of MIL-I-22129C. Ideal for an extremely wide range of mechanical and viscous fluid transfer uses.

FLEXTECH AR-420 Abrasion-Resistant Tubing is extruded from a Markel-formulated reinforced Teflon. With chemical properties similar to AR-400, cut-through and abrasion resistance second only to AR-400, AR-420 also offers excellent flexibility and meets the requirements of MIL-I-22129C. Ideal for fluidic controls and transfer of fluids in difficult environments.

FLEXTECH TEFLON* FEP is a fluorocarbon tubing suitable for continuous 200°C use in applications requiring the chemical inertness, durability, and other desirable properties of TFE but without the extreme high temperature requirements. It has nearly zero moisture absorbency, good antistick properties and semi-transparency ideal for fluid transfer.

FLEXTECH FN NYLON Tubings (FN-1000, standard wall and FN-2000, heavy wall) are extruded from polyamides specially compounded to provide flexibility, heat stability and ultraviolet resistance. They have low moisture absorption (1.5%), excellent mechanical strength, and are superior in corrosion resistance, flexibility and fatigue life. Both FN types are self-extinguishing and are available in non-toxic formulations for food and beverage and other uses at operating temperatures from −70°C to +70°C.

FLEXTECH HP NYLON Tubings (HP-1000, 1600 psi and HP-2500, 2800 psi Burst Strength) are extruded from a polyamide designed specifically for the conveyance of air, gases and liquids under high pressures. They are odorless, tasteless, non-corrosive, fungus-resistant and self-extinguishing. HP tubings have exceptional mechanical strength, are non-toxic, easy to clean and highly recommended for food processing or other heavy duty applications. Temperature ratings for HP-1000: −44°C to +93°C; for HP-2500: −85°C to +105°C.

FLEXTECH LP-80 POLYETHYLENE is a specially compounded tubing designed for the conveyance of air, gases and liquids under low pressure conditions. A strong flexible material with a useful working temperature range of −70°C to +80°C, it is odorless, tasteless, non-toxic, non-corrosive and fungus-resistant. Easily installed using standard fittings.

FLEXTECH U-585 POLYURETHANE is one of the most versatile of materials, combining long life with high working-pressure ratings, superb resistance to fuels and solvents, excellent flexibility, high resistance to abrasion, and low moisture absorption. U-585 preserves its rubber-like pliability and resistance to kinking over a temperature range of −70°C to +105°C, making it suitable for cryogenic use where clamped or pinched to control fluid flow.

FLEXTECH RETRACTABLE NYLON AIR HOSE is a seamless-extruded, abrasion-resistant, long life nylon hose that is helically coiled for spring-like action. It extends easily with minimum resistance and automatically retracts to its original coil configuration upon release. This self-storing feature keeps hose off the floor and out of the way, eliminating the need for expensive reel devices. It never becomes twisted or tangled, has long life, is lightweight and flexible, making it easy to use with any type of air-powered tool. Retractable air hose will not absorb oil and can be used to feed lubricant in air stream.

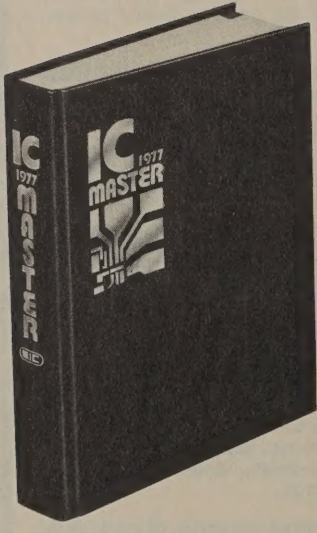
WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

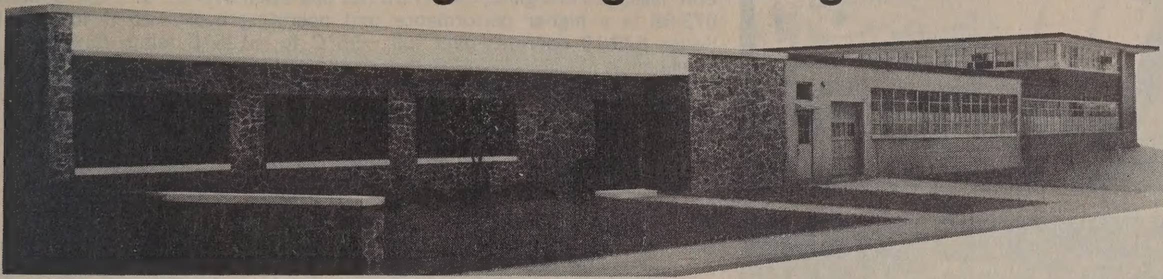
THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

United Technical Publications, 645 Stewart Ave., Garden City, NY 11530

reliable products delivered on time

VARFLEX the complete line of electrical insulating sleeving and tubing



Whatever your problem, heat, cold, flexibility miniaturization, high insulating or dielectric strength—Varflex can supply the required reliability and delivery. Our rapidly expanding plant is fully equipped to supply sleeving for any combination of characteristics you may need. In addition to maintaining large stock for off-the-shelf delivery, Varflex has the productive capacity to provide prompt delivery (often 48 hours) on special orders. As insulation specialists, we are ready to work with you on unusual specifications or applications.

Here is a brief description of Varflex products

VARGLAS SILICONE RUBBER SLEEVING. The ultimate in flexibility, yet dielectric protection to 8000 volts. Class H-A-1 certified to meet Government Specification MIL-I-3190/6 (formerly MIL-I-18057A) Class H-B-1 (4000 volts) available, also. Continuous exposure from —70° to 400°F. does not affect coating or Fiberglas braid. Class H-C-1 (2500 volts), Class H-C-2 (1500 volts) and Class H-C-3 also available.

VARGLAS SILICONE RESIN SLEEVING. Class H-A-1 is recommended for applications requiring extremes of heat endurance and high dielectric strength (7000 volts). Class H-B-1 is identical except for dielectric guarantee (4000 volts). Good abrasion resistance. Class H-A-1 meets the requirements of MIL-I-3190/5. Four other standard grades available where 7000 volt test not important.

SILFLEX SLEEVING. A light coating of Silicone resin on Fiberglas braid. Extremely flexible within a temperature range from minus 85°F. to 500°F.

VARGLAS SILICONE LEAD WIRE. Made from solid or stranded wire covered with one or more walls of Fiberglas braid and impregnated with Silicone. Built to your specifications.

VARGLAS SILICONE TYING CORDS. Continuous filament Fiberglas cords impregnated with Silicone resin, 1/64″ to 1/8″ diameter. Specify Type 46 for dry cure, Type 48 for tacky cure.

VARGLAS S1600 SLEEVING. Newest development in Fiberglas yarn. Will retain "life" at temperatures up to 1600°F. (400 degrees higher than E glass).

VARGLAS POLYURETHANE CLASS F SLEEVING. Made with Polyurethane resins on Fiberglas braid. Offers better than Class B heat resistance (up to 155°C continuously). Available in F-A-1, F-B-1 and F-C-1 grades.

VARGLAS ACRYLIC CLASS F SLEEVING. Highly resistant to acids, organic solvents, oils and water and exhibits fair resistance to alkalies. It is compatible with polyester, acrylic, epoxy, phenolic and formvar wire enamels. Designed to perform for long periods in the 155°C range without loss of any electrical or physical properties. Available in five grades. Class F-A-1 (7000 volts) meets the requirements of MIL-I-3190/3.

VARFIL SLEEVING. Fiberglas braids impregnated with polyester resin. Four grades available in coils as well as 36″ lengths in most sizes. In a class by itself because of its toughness, flexibility, high temperature resistance and ability to withstand bending and twisting without dielectric loss. Compatible with varnish. Over 1000 hours at 125°C., with intermittent operation at 150°C.

VARFLO SLEEVING. Class B insulation. Good flexibility, solvent, oil and moisture resistance. The A grade passes 90° Navy bend test after 2000 hours at 300°F. with 3500 volt end point. Varflo has good shelf life and will not lose dielectric strength when subjected to severe twisting. Classes B-A-1, B-B-1 and B-C-1 are available. Flame and fungus resistant if specified. B-A-1 approved under MIL-I-3190/2 (formerly MIL-I-21557B).

VARGLAS VARNISHED SLEEVINGS. Flexible continuous coatings of flame resistant oleoresinous varnish built up over fine Fiberglas braids in several carefully controlled operations. Operate at temperatures up to 130°C continuously. Available in five grades.

VARGLAS LECTON SLEEVING. Specifically designed for hermetic motors. Non-contamination of Freon and other refrigerants in Class B motors. B-A-1, B-B-1, and B-C-1 grades.

VARGLAS NON-FRAY SLEEVINGS. Type H: The normalizing treatment given the Fiberglas braid removes the organic impurities and tends to hold the individual filaments together. The lack of any bonding agent means it may be subjected to temperatures as high as 1200°F. Recommended for applications where dielectric requirements are not of prime importance. Resists fungus and is noncorrosive. Type HP: Similar to Type H, but dyed various colors for coding purposes. Ideal as secondary insulation where primary covering might disintegrate due to high temperature or continual flexing. Colors may fade at 300°F. Type HO: A very light treatment of resin added after the braid has been normalized — just enough to hold the sleeving round for accurate cutting. Will distend to cover soldered joints or terminals. Avaliable in eight colors. Colors fade at 300°F., but sleeving unaffected up to 1200°F. Best of the three from a non-fray standpoint.

VARGLAS LITEWALL SLEEVINGS. Wall thickness of Type A is .008″ and of Type B, .006″. These extremely flexible, finer braids are supplied untreated, heat treated and/or dyed. Produced in fractional sizes. Because of the construction, one size can be used to cover several different wire sizes. Specify Type HA or HB if heat treated braids preferred.

SYNTHOLVAR EXTRUDED TUBING. Made from vinyl polymers. High dielectric and tensile strength. Will not support combustion nor absorb moisture. Smooth surface, thin wall and flexibility all make for ease in assembling operations. Type SHH recognized by U/L for 105°C applications. Type LT will function at temperatures down to —50°C. Specify fungus resistant tubing where needed. Special formulations for high and low temperature environment. Made to meet applicable Government Specifications MIL-I-631 and MIL-I-7444.

RAYON SLEEVING. These sleevings are varnish impregnated. NEMA grades A-A-1, A-B-1, A-C-1, A-C-2 and A-C-3 readily available.

NYLON UNTREATED SLEEVING. This product has outstanding abrasion resistance and is the ultimate in flexibility. It is intended for use over insulated wire and cable, not as primary insulation.

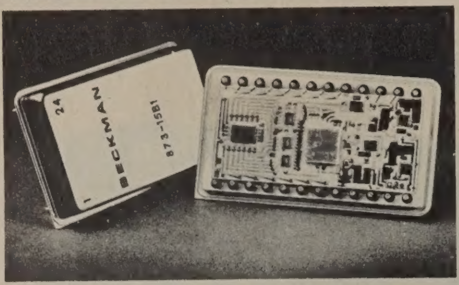
BECKMAN®

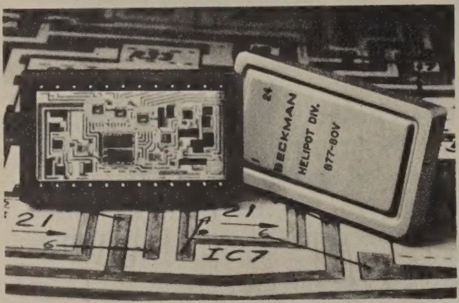
A/D and D/A Converters



12-Bit, TTL A/D Converters

Beckman 12-bit, TTL successive approximation A/D converters are available in three performance and packaging options. Series 873-78 is a low-priced unit packaged in a glass, 24-pin DIP for operation over 0° to +70° C. Series 873-88 is a higher performance unit operating over −25°C to +85°C. Series 873-15 operates over full −55°C to +125°C temp. range and is screened to MIL-STD-883A. Both 873-88 and 873-15 are hermetically sealed in a 24-pin, metal DIP. All are available with full scale voltages of 10 volts unipolar and 5 & 10 volts bipolar. Features include:

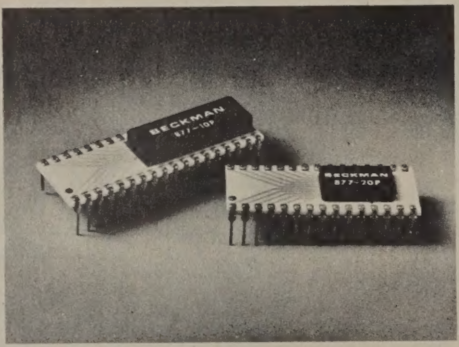
- 12-bit resolution
- ±½ LSB in 12 (±½ LSB quantizing error)
- Internal reference



12-Bit TTL D/A Converters

Beckman offers a complete range of 12-bit, TTL D/A converters for commercial, industrial and military applications. The economy 877-80 is packaged in a glass, 24-pin DIP and operates over 0° to +70°C. Series 877-85 is a higher performance converter specified over −25°C to +85°C. Series 877-15 operates over full −55°C to +125°C temp. range and is screened to MIL-STD-883. Both 877-85 & 877-15 are hermetically sealed in a 24-pin, metal DIP. All are available in voltage and current output models. Features include:

- 12-bit resolution
- ±½ LSB (877-80, 877-85) or ±1 LSB (877-15) in 12 linearity
- 300 nsec conversion settling time (current output models)
- Internal reference

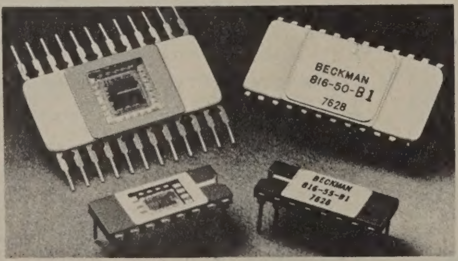


12-Bit, CMOS D/A Converters

Beckman Series 877-10 and 877-20 are 12-bit precision digital-to-analog converters designed specifically for 8-bit microprocessor compatibility. The input registers can accommodate 12-bit words in 4-bit and 8-bit segments. Series 877-10 is a complete internally referenced and output buffered 12-bit converter. Series 877-20 is an externally referenced 4-quadrant multiplying converter. The input and control lines of both series can be driven by TTL or CMOS logic.

- ±½ LSB in 12 linearity over specified operating temperature
- Low power dissipation
- Low cost
- Commercial, industrial, military temperature range and performance options

For complete technical information on Beckman's full line of standard A/D and D/A converters contact your local Beckman sales representative.

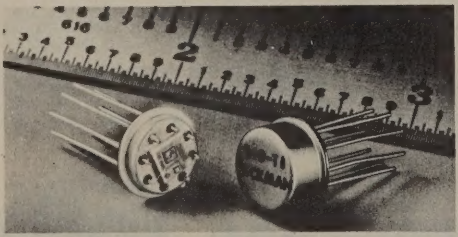


Thin Film Ladder Networks

Series 816-50 and Series 816-55 Thin Film Ladder Networks are low-cost, 12-bit current summing (R-2R-4R-8R) and voltage summing (R-2R) building blocks for unique A/D and D/A converter applications. Both offer 0 to +70°C and −55°C to +125°C temperature range options. Series 816-50 and 816-55 feature:

- 12-bit resolution
- ±½LSB in 12-bit accuracy over full temp. range
- High stability — low noise characteristics

Beckman also stocks a complete line of standard, thick film ladders. Consult your local Beckman sales representative for complete technical information.



Series 840 Precision Voltage Reference

Series 840 Precision Voltage Reference provides the user with a self-contained, ready to use hybrid reference functionally laser trimmed to deliver +10Vdc output at ±0.1% max. absolute accuracy with low ±5 ppm/°C temperature coefficient. Series 840-T1 operates over the −55°C to +125°C temperature range; 840-T2 operates over the −25°C to +85°C range. Features include:

- ±0.1% max. output voltage accuracy (840-T1)
- ±5 ppm/°C output voltage TC
- Hermetically sealed, 8-pin to-5 package

For detailed product information, call, TWX, or write Beckman or your nearest Beckman/Helipot sales representative today.

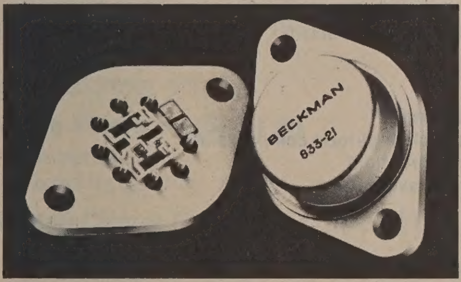
Standard Electronic Module (SEM) Program

Beckman is a fully qualified supplier of Navy Standard Electronic Module Program modules. Cost effective, low profile, hermetic, ceramic hybrid packaging allows high density and high performance electrical functions to be packaged in the standard 1-A SEM configuration. One hybrid on each side allows 40 pin-outs of high density packaging. Precision active filters, digital-to-analog and analog-to-digital converters and other complex functions can cost effectively utilize the functional trimming and density capabilities of hybrid technology. Thin or thick film can be combined with most semiconductor technologies to provide the optimum in integration. Functionally specified standard or specials are available. Consult the factory for complete details.



Power Amplifiers

Beckman Series 833-21 are general purpose operational amplifiers capable of providing output currents in excess of 1 ampere at ±12V. Available off-the-shelf in an 8-pin, TO-3 package, Series 833-21 features:

- Wide full power bandwidth (15kHz)
- Low quiescent power (100mW @ ±15V)
- High slew rate (3V/μs)

Beckman stocks a complete line of standard power amplifiers to meet industrial and military application requirements. Consult your local Beckman sales representative for complete technical information.

Beckman
HELIPOT DIV

DC Voltage Regulators

Beckman hybrid circuit voltage regulators are available in high performance military or low-cost industrial models, and cover the entire voltage range of requirements for most semiconductor circuitry (from 3 to 120 volts) with either positive or negative outputs. Both preset output and adjustable output models are available with regulation to ±0.005% (line and load). All offer maximum flexibility of performance parameters so that modifications can be made to satisfy individual system requirements. Consult your local Beckman sales representative for complete technical information.

Custom Hybrid Microcircuits

Beckman custom microcircuit ability is based upon thick and thin film material technologies with an integrated circuit chip handling capability. With these combinations, Beckman can supply a wide variety of linear and digital circuits including: active filters for telephone tone filter products, DACs and ADCs from commercial to military standards, power linears from amplifiers to voltage regulators, passive substrate to multilayer digital hybrids, dual logarithmic amplifiers, hammer driver circuits, decoder driver circuits, signal conditioning circuits, oscillator circuits, and massive resistors for use as infrared heating sources.

For detailed product information, call, TWX, or write Beckman or your nearest Beckman/Helipot sales representative today.

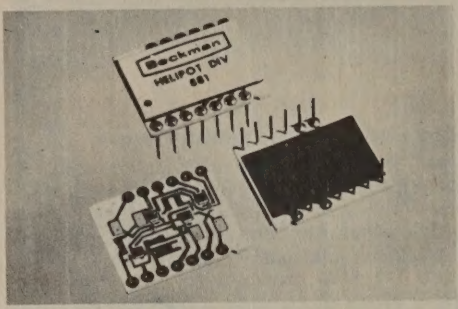
BECKMAN®

Telecommunication/Filter Products



Model 881 Universal Active Filters

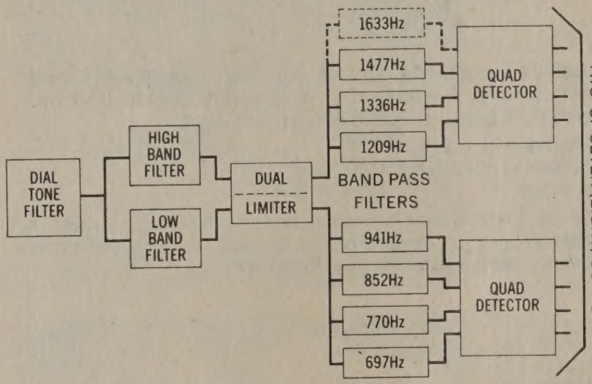
Model 881 is a two-pole, audio-frequency filter that can be used as a basic building block to generate virtually any complex filter function. Model 881 features:

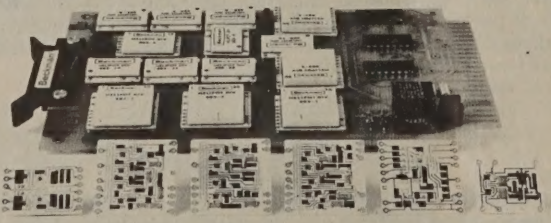
- Simultaneous high-pass, low-pass, and band-pass outputs
- Inverting, non-inverting or differential operation
- 10kHz maximum operating frequency
- 0.5 to 50 adjustable Q range

Series 883 Telecommunication Products

Beckman Series 883 are standard tone-decoding building blocks for high-performance central office, PBX, accounting system or industrial control telecommunication applications.

Series 883 are pretuned to meet Bell System performance requirements, and are available off-the-shelf as individual modules or in preassembled, standard rack-mountable PC cards.





Model 883-1 Dial-Tone Filter

- Modified dual-notch active filter
- 50dB notch attenuation
- ±12V power supply operation

Model 883-2 Low-Band Filter

- Modified Cauer low-pass filter
- 941Hz upper cutoff frequency
- >20dB attenuation above 1190Hz

Model 883-3 High-Band Filter

- Modified Cauer high-pass filter
- 1209Hz lower cutoff frequency
- >dB attenuation below 995Hz

Model 883-4 Dual Limiter

- Two-section signal amplitude compression
- ±300mV input threshold
- 11V p-p square wave output

Model 883-5 Quad Tone Detector

- Four preset threshold detectors
- Preset time delay/invalid tone rejection
- TTL complementary output logic

Models 883-6 to 883-16 Band-Pass Filters

- Eight standard telephone frequency filters: 697, 770, 852, 941, 1209, 1336, 1477 and 1633Hz
- ±0.5% f_o accuracy/high f_o stability
- High input impedance/low output impedance

Models 883-107 and 883-108 Tone Receiver Cards

- Complete hybrid set and necessary system components
- Preassembled and test standard PC board
- Standard 22-pin, 0.156" (3,962mm) spacing, edge plug
- 4 X 3 tone matrix with 2 of 7 output (883-107)
- 4 X 4 tone matrix with 2 of 8 output (883-108)

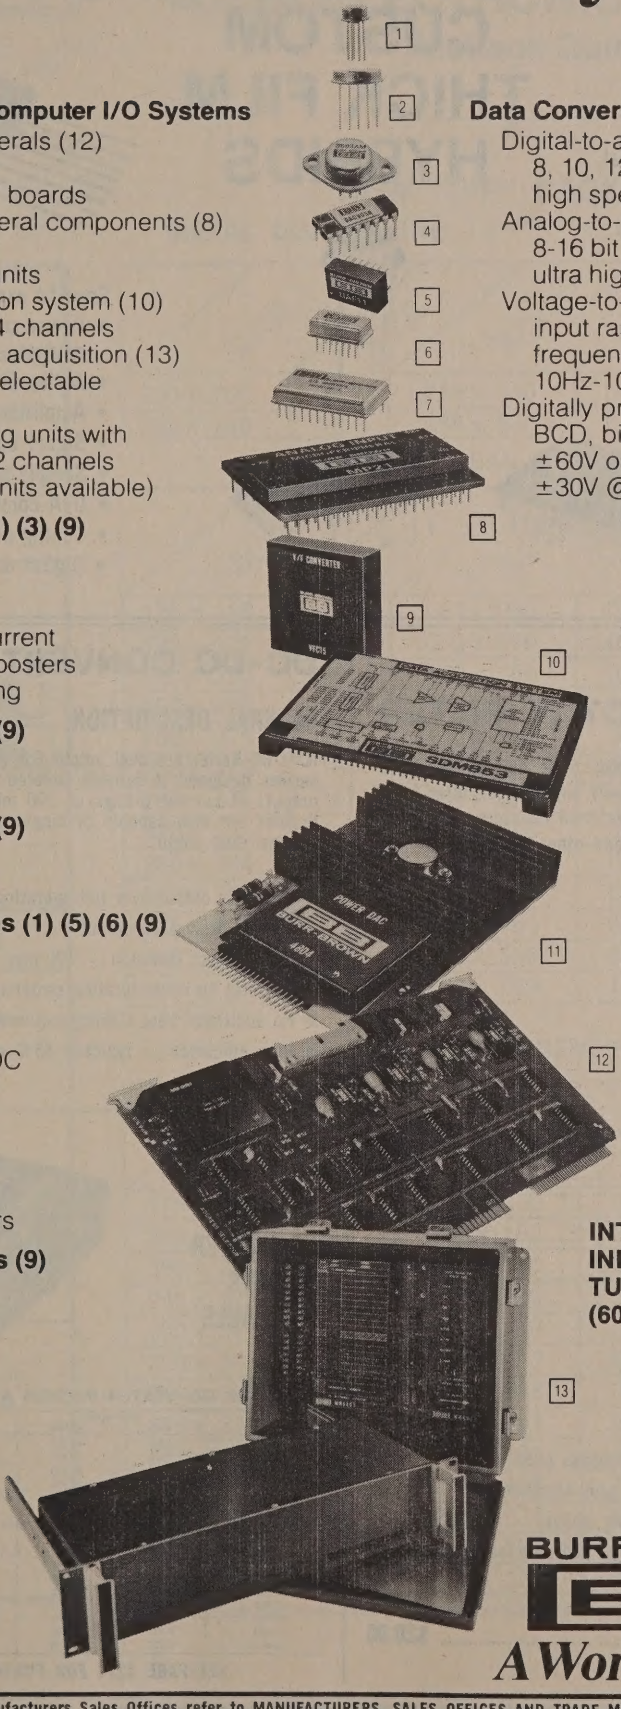
Burr Brown's Complete Product Story



Data Acquisition And Computer I/O Systems
- Microcomputer peripherals (12)
  - analog input/output
  - plug compatible PC boards
- Microcomputer peripheral components (8)
  - analog input/output
  - hybrid compatible units
- Modular data acquisition system (10)
  - building blocks 8-64 channels
- Micromux remote data acquisition (13)
  - local receiver with selectable BAUD rate
  - multiplex transmitting units with capacities up to 512 channels (intrinsically safe units available)

Operational Amplifier (1) (3) (9)
- General purpose
- Low drift
- Low bias current
- High voltage & high current
- Buffer amp & power boosters
- Wideband & fast settling

Isolation Amplifiers (8) (9)
- Optically coupled
- Transformer coupled

Active Filters (4) (5) (6) (9)
- Universal
- Fixed frequency

Analog Circuit Functions (1) (5) (6) (9)
- Multipliers/dividers
- IC multipliers/dividers
- Computing true RMS-to-DC converters
- Thermal true RMS-to-DC converters
- Log amplifier
- Oscillators
- Two-quadrant analog divider
- Multifunction converters

Modular Power Supplies (9)

Data Conversion Products
- Digital-to-analog converters (4) (6) (7) (8) (9)
  - 8, 10, 12, 16 bit, low drift
  - high speed, high resolution
- Analog-to-digital converters (7) (8) (9)
  - 8-16 bit binary, 4-digit BCD
  - ultra high speed, 12 bit CMOS
- Voltage-to-frequency converters (1) (9)
  - input range 1mV to 10V
  - frequency range 1Hz-10kHz, 10Hz-100kHz, 50Hz-500kHz
- Digitally programmed voltage sources (11)
  - BCD, binary programming, ±10V, ±60V output
  - ±30V @ 1A, ±100V @ ±100mA
- Multiplexers (4)
  - 4,8 channel differential
  - 8,16 channel single-ended
  - CMOS protected inputs
- Sample/holds (2) (5) (6)
  - selectable acquisition time and droop
  - selectable gain 1-1000
  - fast, 0.01%, low cost
- Peak detectors (5) (9)
  - gain accuracy ±0.01%
  - low droop rate ±5mV/sec.
- Comparators (5)
  - fast settling
  - window dual limit

Instrumentation And Data Amplifiers (1) (5) (9)
- Low drift
- High input impedance
- Low bias current
- Variable gain differential
- Programmable gain

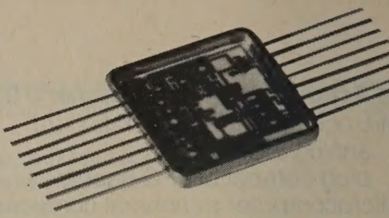
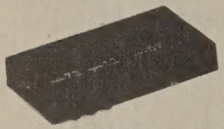
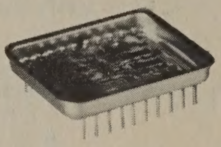
CUSTOM THICK FILM HYBRIDS

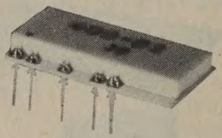


Broad capability in commercial, industrial, and military applications offering:

- Total design services
- Processing per MIL-STD-883 and MIL-M-38510
- Multi-layer capability
- Full range of packaging methods





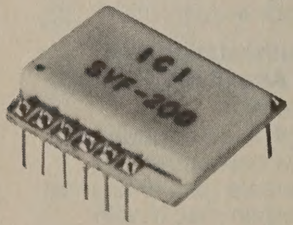


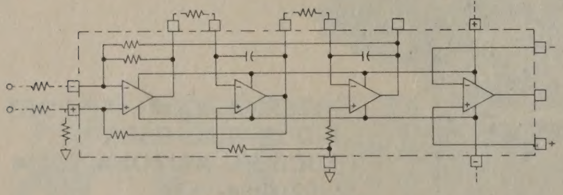
Specific experience in:

- Power conversion and regulator devices
- Active filters
- Amplifiers and preamplifiers
- Signal conditioning electronics
- Sample and hold circuits
- D/A converters
- Timing devices
- Digital devices

MODEL SVF 200
STATE VARIABLE ACTIVE FILTER

Model SVF 200 is a two-pole audio-frequency filter that can be used as a basic building block to generate virtually any complex filter function. The SVF 200 may be adjusted using external resistors, to provide Butterworth, Chebyshev, Cauer parameter and other functions.





MODEL SVF 200 FEATURES:

- Short circuit output current limiting
- Simultaneous bandpass, lowpass, and highpass outputs.
- Independent bandwidth, frequency, and gain adjustments.
- Constant bandwidth and constant Q tuning modes.
- Additional 'free' compensated amplifier for odd pole isolation, gain or feed forward element.

Price (1-9) **$20.00**

DC-DC CONVERTERS

GENERAL DESCRIPTION:

ICI's DC Series are dual output 6.0 watt, high efficiency DC to DC converters designed to provide isolated positive and negative DC voltage outputs at current ratings of 200 milliamperes from each output. The devices are also capable of single ended outputs equal to twice the nominal dual output.

- 6.0 watts output over full operating temperature range.
- 200 ma. from each output.
- Input/output isolation — 100 meg. Ω min. at 500 VDC.
- Operates in non-saturating switching mode.
- No additional heat sinking required.
- High efficiency — typically 83% at rated load.

Price (1-9) **$42.00**

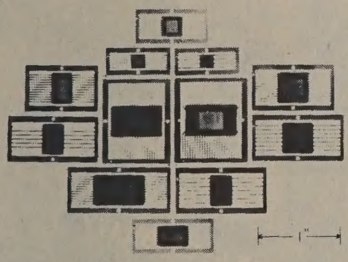
HERMETIC MICROELECTRONIC FLAT-PAKS

Package Guide

MINI-SYSTEMS' packages now and in the future will cater to new I.C. devices and hybrid microcircuit requirements. MINI-SYSTEMS pays consistent attention to quality, customer service and deliveries.



DESIGN FEATURES

- .030″ and .050″ lead centers
- .080″ deep versions
- Available with beryllia bases
- Designed to meet MIL-std-883 requirements
- Greater packaging density
- Size and weight reductions

MINI-SYSTEMS' packages can be custom designed to fit your specific requirements. They are available with metal or ceramic bases. They can be selectively plated. And most packages are available in extra deep versions.

High Power Microwave Signal Generation

CW or PULSE 150-25,000 MHz

Epsco offers you off-the-shelf capability encompassing the vast majority of user requirements. Should you need a special design, however, our engineers can provide state-of-the-art expertise that can save you time and money. Call us. We'll be happy to discuss it.

PEAK POWER CALIBRATION SYSTEM

(Mil spec. AN/USM-397)

A secondary standard for calibrating TACAN, DME, DABS, ATC, IFF and other accuracy-demanding systems in the 925 to 1225 MHz frequency range. Power accuracy of ±0.3 dB is directly traceable to the National Bureau of Standards. Peak power of 5kW. Direct readout of pulse power, pulse width, PRF, and operating frequency. Pulse duration from 0.35 to 5 microseconds. Automatic sequencing. Sync output. Accepts internal/external trigger.

PULSE SIGNAL SOURCES

Model PH40K

The highest pulse power available in a single generator.

Covering the range from 150 to 6100 MHz, tuneable plug-in oscillator heads provide guaranteed minimum powers as high as 40kW. Magnetron plug-ins further extend the upper limit to 16,500 MHz. Pulses are continuously variable in width from 0.4 to 25μs and in repetition rate from 10 to 10,000 pps. Available also in pulse modulator configuration (MH250).

Model PG5KB

Wide range, medium power unit.

With guaranteed minimum powers as high as 5kW, the Model PG5KB covers 150 to 6100 MHz with plug-in heads. Magnetron plug-ins further extend the upper limit to 16,500 MHz. Pulses are continuously variable in width from 0.3 to 50μs and in repetition rate from 20 to 25,000 pps.

CW SIGNAL SOURCE

Model C203

The highest CW power available in a single instrument.

Covering the range from 200 to 6100 MHz with plug-in heads, the Model C203 provides full power modulation at 0.5 duty cycle with internal 1000 Hz square wave generator or from an external pulse source. Power levels of oscillator heads are from 0.5W to 100W.

CAVITY OSCILLATORS AND AMPLIFIERS

Standard oscillator models for CW or pulse applications in a variety of configurations cover selected frequency bands from 150 to 6100 MHz. Cavity amplifiers from 150 to 3000 MHz, CW and pulse, for applications in TACAN, DME, and similar requirements. These cavities cover the power output range from 0.5W to 40kW.

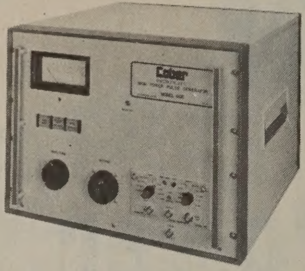
HIGH POWER-AMPLIFIERS, PULSE GENERATORS, D.C. POWER SUPPLIES, MICROWAVE SYSTEMS

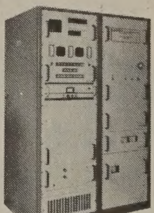
HIGH POWER PULSE GENERATORS



Model 606 generates 31KW pulses, 2500 volts at 12.5 amps. Pulse width is 50 nanoseconds to 10 milliseconds, rep rate 1 shot to 1MHz with rise time of 20 nanoseconds. Drives grids of tubes and guns, use it for gas discharge and plasma studies as well as component testing, laser applications and more.

Cober's pulse generators are versatile lab instruments and provide high power kilowatt pulses in nanoseconds. A broad line is available from stock with pulse widths out to D.C., both positive and negative polarities or alternating polarities and outputs floating to 50 KV. Plug-in accessories provide an extensive range of voltage and current combinations.

LABORATORY MICROWAVE SIGNAL GENERATORS AND AMPLIFIERS

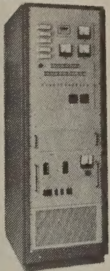


Model 225I is broadband, TWTA providing 250 watts CW or 1KW pulsed from 1.0-1.5GHz. Pulse width is variable from 0.5-20 microseconds and is used for CW and pulse jamming studies on countermeasures programs.

Cober's high power R.F. signal generators and amplifiers provide microwave frequency energy for use in antenna-pattern studies, EMI susceptibility measurements, and in testing microwave components such as TR limiters, filters and circulators. In ground support equipment stations, Cober units are the basic source of high power microwave test frequencies.

Cober's sources use magnetrons or amplifiers such as klystrons and TWT's working in conjunction with suitable oscillators and drivers. The choice of the final tube is dependent on the required power output, frequency, bandwidth and, of course, the intended application. Units are available from L-Band to millimeter frequencies, for CW or pulse operation and at power levels from several hundred watts to the megawatt region.

MICROWAVE COMMUNICATIONS TRANSMIT SUBSYSTEMS



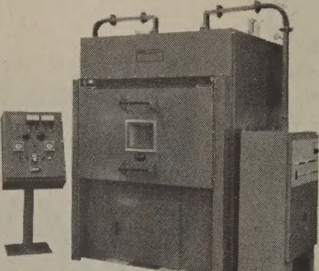
Model 1400-KK12, 14-14.5GHz, 1.25KW Klystron PA is uplink HPA for satellite communications. Handles data, voice and TV signals and can be supplied with preset channel tuning and for local or remote operation.

Cober HPA's and transmitters are the heart of satellite and troposcatter communications systems. All circuitry is fully solid state except for the final amplifier tube. Features include complete equipment and personnel safety, flexible controls and status indicators and a full complement of accessories for the greatest possible system versatility. Careful design assures low distortion, spurious and harmonic content.

Cober HPA's and transmitters are available at power levels of several hundred watts to many kilowatts at microwave frequencies. Cober has standard units for the "L," "S" and "C" band tropo frequencies and for the 5.9-6.4GHz, 7.9-8.4GHz and 14.0-14.5GHz satellite communications frequencies.

Frequency upconverters to translate a 70MHz modulated IF to the microwave carrier frequency are also available for integral mounting in HPA's. Model 1400-UP70 converts 70MHz to any selected carrier frequency in the 14.0-14.5GHz range.

MICROWAVE HEATING SYSTEMS

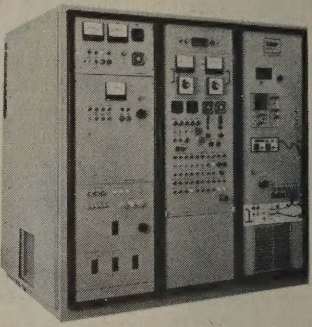


Model BPH 18A, 18KW, 2450MHz industrial microwave oven provides rapid and efficient processing. System includes auxiliary high temperature hot air heating. Cavity size is 4′ x 4′ x 4′ and has remote control and automatic process cycling.

For industrial applications. Full range of power packs from 1 to 50KW at both 2450MHz and 915MHz. Complete systems for laboratories, food, chemical, rubber, foundry and factory applications. Ovens, components, waveguide and instrumentation for users to assemble their own systems and complete applications assistance to adopt microwaves to new processes for efficient, energy conscious, smoke free, high quality electronic processing.

PULSE MODULATORS AND D.C. POWER SUPPLY SYSTEMS

Cober's line of pulse modulators include units to drive high powered pulsed microwave tubes, high power lasers, plasma tubes, and ultra-violet sources. Power levels range from a few kilowatts to over 100 megawatts. In addition to standard modulators, we specialize in the generation of state of the art nanosecond rise times and high rep rates. Full MIL Spec solid state modulators are supplied for systems use, and soft tube and hard tube units are furnished for laboratories and particle accelerator facilities.



Model 2048 is 35KV TWT Test Set. Includes highly regulated D.C. power supplies and Cober developed grid modulator. Unique feature is oscilloscope "floating" at 35KV with all controls at ground potential that allows precise display of TWT pulses.

Cober's unique pulse capability is combined with its power supply "know-how" to provide special pulsed systems for fusion research programs. This pulse and D.C. capability has made Cober the leading supplier of high power microwave tube test equipment.

Cober Laboratory and MIL Spec DC supplies operate over 5KW and at voltages between 5KV and 1000KV. Standard electro-mechanical or electronic regulator modules can be incorporated to furnish regulation and ripple to 0.001%. Our Systems Engineering Group designs full MIL Spec units and provides all integration and software to satisfy Government requirements.

The products shown on this page are representative of Cober's very broad line. They have in common a concept of standard packaged modules and designs which make it as easy and as economical for our customers to buy units to their own specifications as it is for them to buy our standard products. If your need is in the area of high power electronics won't you please call us.

Series A500, A600

The LogiMetrics Traveling Wave Tube Amplifiers comprise the most complete product line available from one manufacturer. These compact, solid state units cover the frequency range from 0.45 to 18.0 GHz offering CW power outputs from 0.5 to 600 watts and peak pulse power up to 2 kw.

The amplifiers utilize integrated circuit power supplies and PPM Traveling Wave Tubes in their most efficient configurations. They are packaged for ease of maintenance and long equipment life.

Each TWT is protected by helix current and voltage sensors, filament surge limiting and thermal overload sensors. The high power amplifiers (A500 and A600 series) offer remote monitoring and control as standard features.

Options are available for military and commercial system applications including airborne and communication systems. The amplifiers are available under G.S.A. Contract.

Series	Frequency Range (GHz)	Power Output Min (Watts)	Gain Min (dB)	N.F. Max (dB)

MICROWAVE AMPLIFIERS AND GENERATORS

TWT AMPLIFIERS

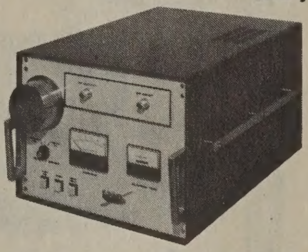
Four models cover your power requirements: 10, 20, 100 and 200 watts. All provide stable microwave power to meet testing, measurement, and calibration requirements.

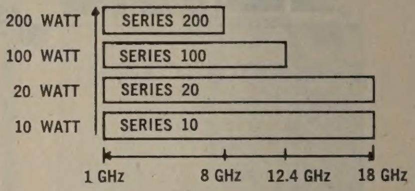
Modular construction and plug-in boards accommodate a wide variety of standard and special traveling wave tubes.

Solid state components and protective circuitry. Beam and helix current metering. Options include VSWR protection, harmonic filtering, and power monitoring.

10 /20 WATT SERIES

100 /200 WATT SERIES





65 WATT SIGNAL GENERATOR

10 to 2500 MHz with six plug-in heads. Highest stability and reliability for laboratory calibration, testing, and measurement.

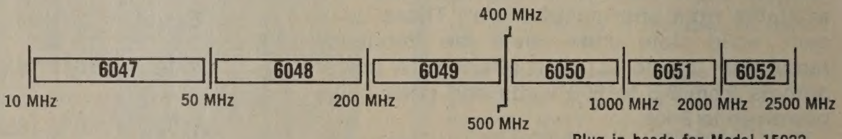
Frequency Stability: ±0.003%/10 minutes.

Power Stability: ±0.2 db/hour.

Internal and external modulation. Single control tuning to 1% of actual frequency. Front panel power indication.

All solid state components (except osc. tube), regulated power supplies, and conservative design provide laboratory quality in a compact unit.

MODEL 15122 SIGNAL GENERATOR



Plug in heads for Model 15022

200 WATT CW AMPLIFIER

10 to 1000 MHz with four plug-in heads. The amplifier can be used to drive higher power amplifiers or as a final amplifier driven by a lower power source.

COMMUNICATION AMPLIFIERS

This line of high power amplifiers was designed specifically to fill the need for high power linear amplification to extend the communication range of existing AM transmitters. The amplifiers are also useful in Class B television or Class C FM service. The amplifiers are a complete package providing metering, safety features, and support circuitry. These versatile quality constructed units provide a simple and convenient means of obtaining increased power.

- Front panel dial tuning. Some models available with servo/local remote tuning.
- Individual front panel metering of plate, screen, grid and filament circuits, plus input and output RF power (forward and reflected).
- Elapsed time indicator.

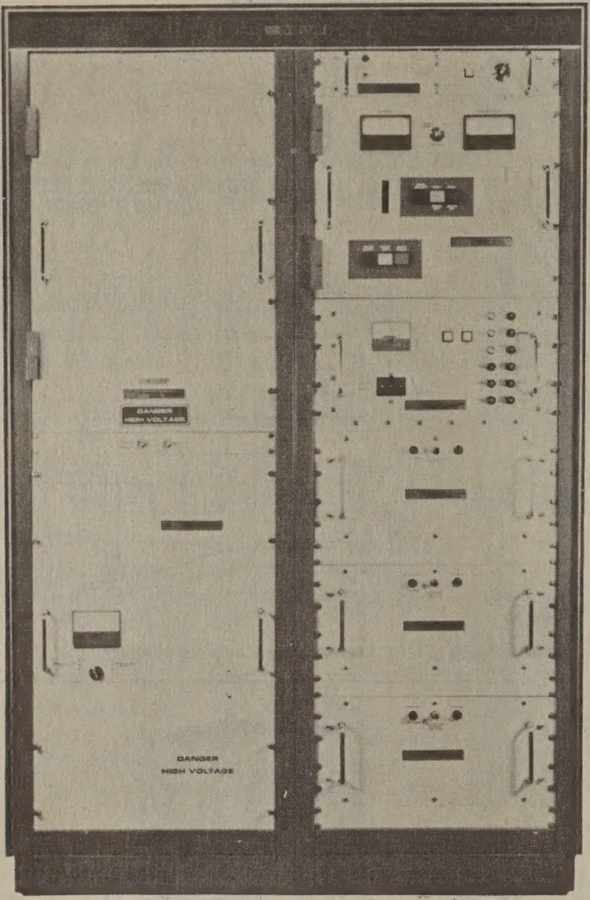
MICROWAVE SYSTEMS

500-2000-WATT KLYSTRON CW AMPLIFIER SYSTEMS



Front view of the MCL Model Number 10475 2KW Klystron Communication Amplifier System. System features include the following: Automatic turn on sequencing, solid state fault/control circuitry and LED fault indicators, automatic leveling of the RF output, highly regulated and filtered power supplies, and ease of serviceability and maintainability.

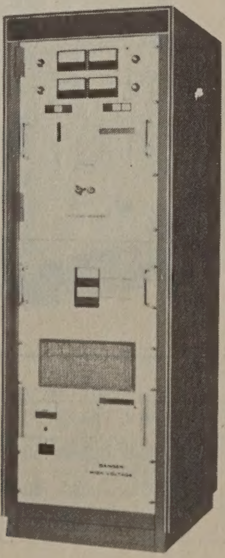
This line of high Power Klystron amplifiers is designed for up-link satellite service in the tropo bands. The equipment consists of a klystron and the necessary power supplies, control-monitoring and protective circuitry to insure safe operation for equipment and personnel.

The amplifier uses Klystrons specifically designed to provide the performance in communication service. The supplies are conservatively designed to insure maximum reliability and are well regulated and filtered to minimize residual modulation.

Controls, fault indicators and meters are provided on the panel to permit ease of operation. Should a transitory fault occur the unit will automatically recycle and return to full service.

The circuitry is contained in slide out drawers or slide out shelves to permit complete maintenance from the front panel. In addition, test points are placed throughout at crucial circuit locations.

Freq. GHz	Power Output	Model
.775-.985	2 KW	10495
1.7-2.4	2 KW	10496
1.6	2 KW	10475
5.925-6.425	.7 to 3 KW	10497



Suggested applications include biological research, factory test-source.

This series includes 8 individual systems, each embodying highly desirable features such as high power capability, broad frequency range. (Any of these systems can be custom modified.) Each system is engineered conservatively and quality built, affording users maximum reliability and economy.

Freq. MHz	Power Output	Model
1700-2400	1.0 KW	10282
1700-2400	1.0 KW	10283

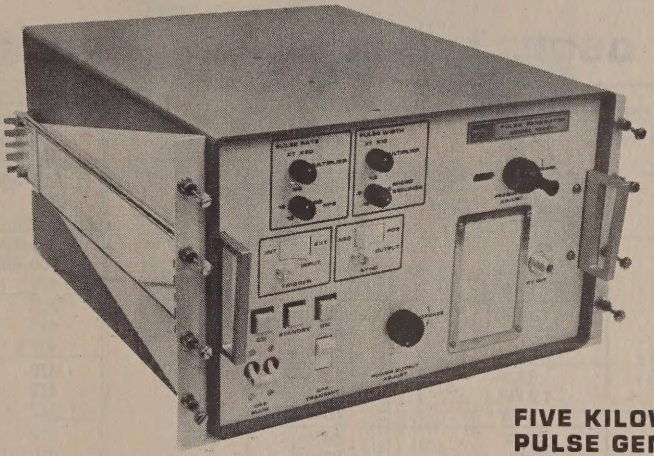
MICROWAVE SYSTEMS

PULSE SYSTEMS

MCL has designed a number of high power pulse systems for special applications. The systems listed are but a few of the many designed and have been selected since they typify the broad capability of MCL. These equipments are complete assemblies and include the necessary power supplies, protective circuits and control circuitry to provide turn-key operation. The applications vary from ground and airborne radar to laboratory test instrumentation. The capability and expertise represented by this array of systems is available to solve your system problems.

Frequency	Power Out	Model
120-400	2 KW	10224
145-154	50 KW	10258
146	100 KW	10343
150-160	125 KW	10275
216	30 KW	10264
205-225	50 KW	10472
476	10 KW	10315
500	15 KW	10292
1010-1050	1 KW	10109
2300-2450	350 W	10116

MODEL 10461 RF PULSE GENERATOR



FIVE KILOWATT RF PULSE GENERATOR

The Model 10461 Pulse Generator is continuously tunable from 900 to 1220 MHz which is the Tacan Band. The generator is extremely useful as a Tacan test set. Peak power output is five kilowatts at .01 duty cycle. Pulse width and pulse repetition rates are adjustable.

The instrument is complete with power supplies, grid pulse modulator, cavity oscillator, cooling, output circulator, and protective circuitry.

The power output is adjustable from 50 watts to 5.0 kilowatts. A three digit numerical read-out with calibration chart provides accurate frequency setting.

The 10461 is a solid state instrument except for the planar triode oscillator. An output circulator is provided to minimize frequency pulling and power variations due to load mismatch; operation into open or short circuit conditions will not damage the equipment.

HIGH POWER LONG PULSE MODULATOR

Designed to fulfill the need for a high power long pulse modulator in laboratory or field. The unit interfaces readily with plate pulsed oscillator cavities or other microwave tubes.

SPECIFICATIONS

	10478	10477
Output Voltage KV (Positive Only)*	Adj. 0-10 KV (0-8 KV @ 3 A)	Adj. 0-10 KV (10 KV@6A)

MICROWAVE CAVITIES AND FILTERS

The listed models are MCL standards, produced to satisfy the demanding needs of the original equipment manufacturer engaged in producing industrial or military equipment. These reliable, rugged cavities have been used in missiles, helicopters, ships and mobile applications. If your cavity needs are not listed here, minor modifications to existing units or custom design by MCL could make your requirements a reality.

FILTERS COAXIAL LOW PASS

FREQUENCY RANGE FROM 200-2000 HZ

MCL Low Pass Filters are designed for cut off at a specific frequency (see table). The cut off curve is relatively steep and is sufficient for most applications; however, additional filter sections can be employed to increase the offband attenuation. For special applications, MCL's capability includes custom filter designs on a quick reaction basis.

TYPICAL SPECIFICATIONS

Max. VSWR (Passband): 1.4:1.
Max. Insertion Loss (Passband): .3 db.
Impedance: 50 ohms.
Power Rating, CW: 3 KW.
Power Rating, Peak: 50 KW.
Finish: Silverplate.
Flanges: LC and EIA RS-225.

CW OSCILLATORS

The CW Oscillator cavities designed by MCL cover a very wide range of frequencies, power levels and applications, and have been used by OEM in industrial and military applications ranging from oil exploration to aircraft altimeters. The listings below, though not complete, typify the broad expanse of MCL's experience in CW Oscillator design and manufacture. If your exact requirements cannot be met using a listed cavity, call us for assistance.

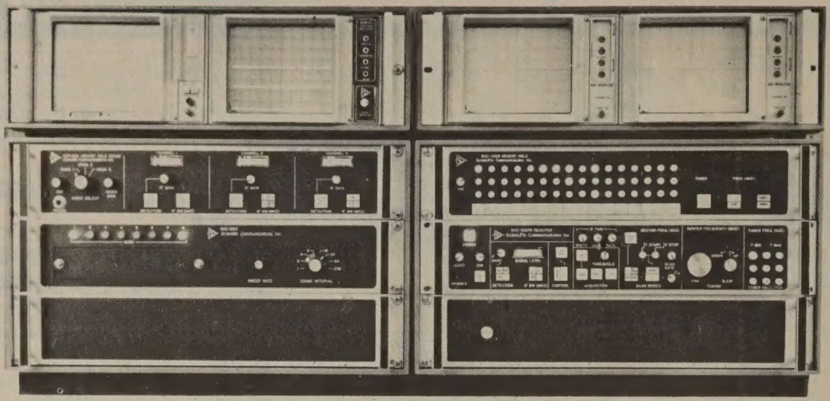
Capability in MICROWAVE SURVEILLANCE RECEIVERS

Scientific Communications, Inc. offers a full line of solid state microwave surveillance receivers. Current production models cover the frequency range from 5Khz to 40 Ghz. Various configurations are available by combining fully developed subassemblies. This permits the user a customized receiver for a particular application with future expansion capability. All designs are state-of-the-art yet are the most cost effective receivers available. All units offer performance parameters that meet or exceed specifications offered for any comparable equipment. Many unique features are offered to enhance manual operation capability. Most systems offer full computer compatibility. All units are designed to the intent of MIL-E-5400 or MIL-E-16400. Reliability and performance achieved from numerous systems at sea, in the air, and ground based have enhanced the reputation of Scientific Communications, Inc. as a leader in the field of Surveillance receivers. Contact SCI for your applications that range from fixed frequency down conversion to full spectrum coverage.



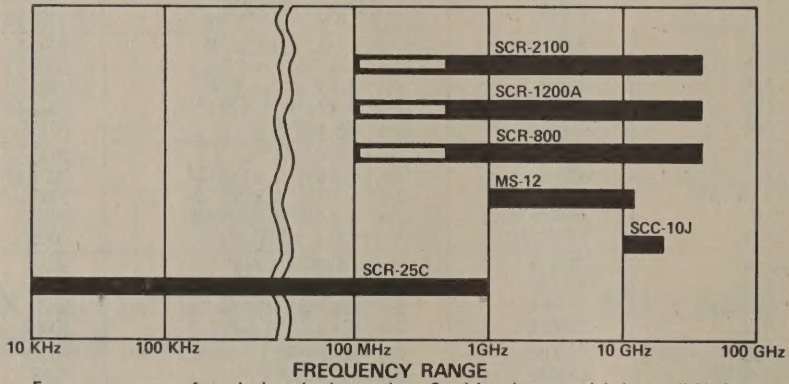
The SCR-2100 is a complete solid-state receiver system providing **spectrum** surveillance, **acquisition,** and **analysis capability** in the 0.1 GHz to 40 GHz range.

The system consists of either **19″ rack mount or aircraft style control panels** and numerous remote controlled units in **ATR configurations.**

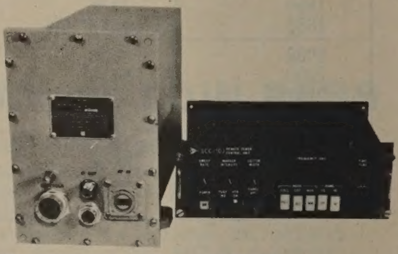
Independent octave band tuners allow **simultaneous panoramic reception** over the microwave spectrum or a mix of multiple tuners on a given band. Any combination of eight tuners may be used. Options permit **simultaneous signal analysis of all 8 tuners.**

Phase lock frequency accuracy is achieved with a frequency synchronizer.

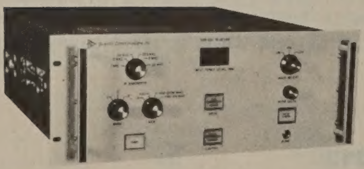
Complete digital control, computer compatibility, scratch pad memories, optimized search and aquisition capability, signal identification from memory comparison, digital refreshed displays.



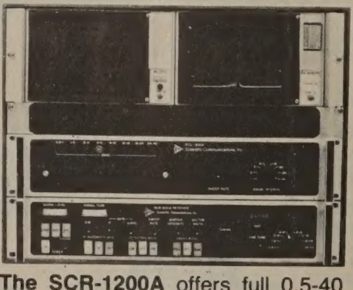
Frequency coverage of standard production receivers; Special equipment and designs available from 10 KHz to 40 GHz.



The SCC-10J offers 10-20 Ghz coverage when added to the WLR-1 or APR-9 series receivers.



The SCR-25C offers computer controlled analysis capability over the range of 5Khz to 1 Ghz. Features include accurate digital display of received signal amplitude.



The SCR-1200A offers full 0.5-40 Ghz coverage in the most cost effective full performance receiver for search and analysis capability. Simultaneous multi-band RF Panoramic capability with included video multiplexer is one of many outstanding features.

The SCR-800 is a full capability control/IF processor assembly and is compatable with all SCI Remote Tuners from .5-40 Ghz.

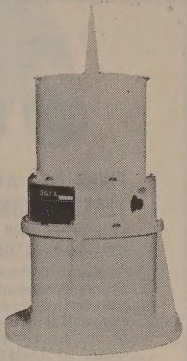
VEGA PRECISION LABORATORIES, INC.

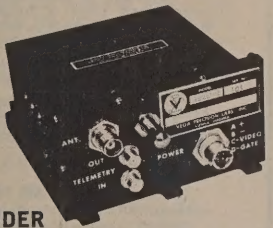
VEGA MAJOR PRODUCTS: Portable Radar Tracking Systems • Command and Data Systems • Target Control Systems • Radar Transponders • Radar Beacons • Transmitters • Receivers • Location and Navigation Systems • Radar Augmentation Devices • Special Test Equipment • R-NAV Devices • Antennas and Microwave Devices • Ranging Systems

X BAND RACON TRANSPONDER

(MODEL 361X)



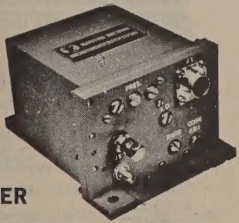
This Vega RACON is a navigation aid suitable for positioning offshore drilling equipment, buoy moorings, and defining most sea and landmark locations. **Transmitter:** ±3 MHz, 300 watts minimum, 2 pulse reply. **Receiver:** −65 dbm sensitivity. **Environmental:** Watertight, temp. −40°C to +70°C. **Power:** 24 to 30 VDC (no internal ground). **Size:** Overall height 15 in. Diameter: 8½ in. **Weight:** Approximately 9 lbs.



C-BAND RADAR TRANSPONDER

MODEL 302C-2

Freq: 5.4-5.9 GHz; **Receiver Type:** Superhet with sensitivity of −70 dbm; **Transmitter Type:** Magnetron with 400 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 43 cu. in.; **Weight:** 43 oz.; **Temp:** −35°C to +75°C; **Altitude:** 230,000 ft.; **Humidity:** 100%; **Shock:** 125 g in any direction, 3 shocks in opposite directions along each axis for 6 μsec. each; **Acceleration:** 125 g applied along any axis for 3 minutes; **RFI:** Per MIL-1-26600. **Vibration:** Sinusoidal, 5 to 25 Hz 0.4 in. DA and 15 g 15 to 2500 Hz.



C-BAND RADAR TRANSPONDER

MODEL 321C

Freq: 5400-5900 MHz; **Receiver Type:** Superhet with sensitivity of −70 dbm, 100% firing; **Transmitter Type:** Triode Cavity with 300 w min. peak power output; **Input Power:** 24 to 32 VDC, 45 w; **Size:** 38 cu. in.; **Weight:** 44 oz.; **Temp:** −37°C to +75°C; **Altitude:** 230,000 ft.; **Acceleration:** 125 g; **Shock:** 125 g; **Vibration:** Sinusoidal, 5 to 25 Hz, 0.4 DA. 25 to 2500 Hz, 15 g **RFI:** Per MIL-1-26600.

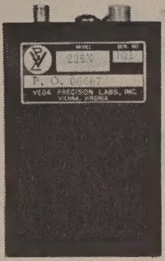
CAVITY BACKED HELIX ANTENNAS

MODELS 815S, 820C and 830X — C, S, and X BAND

An optical quartz-loaded, cavity backed helix radiator which produces a circularly polarized radiation pattern. The use of quartz material provides for high and low temperature stability with no degradation in electrical performance. Flush mounting is normally used on reentry vehicles with no performance deterioration as a result of reentry heat.

X-BAND RADAR TRANSPONDER

VEGA'S MODEL 229X



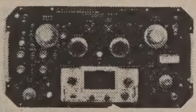
Miniature all solid-state radar transponder is smaller than a king size pack of cigarettes; weighs only 10 oz. This X-Band (9.1-9.6 GHz) unit employs the latest state-of-the-art solid-state devices and construction techniques, and features high sensitivity (−40 dBm full-firing) with average power output of 4 watts peak. It operates with an input voltage from 24 to 32 VDC and draws only 60 milliamperes quiescent or 80 milliamperes at a PRF of 2500 PPS. Uses single or double pulse codes and operates with practically all X-Band airborne, ship and ground radars in use today without any change to the radar. A circularly polarized antenna is attached to the top of the unit. Optional battery pack available. Also available in C-Band (5.4-5.9 GHz).

C, S AND X-BAND STUB ANTENNAS

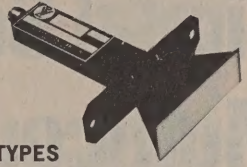
MODELS 832S, 845CX

A vertically polarized omnidirectional antenna enclosed within a radome, it is compact and extremely lightweight while maintaining the electrical and environmental characteristics of this type antenna. Height of the radome is approximately ¾″; diameter is approximately 1″. The skin of the vehicle serves as the ground plane for the antenna due to the simplified mounting technique. Mounting is accomplished via a "D" hole (.505 dia. x .480 flat) through the vehicle skin. It is then secured to the vehicle with a locking nut.

RADAR SIMULATORS C-BAND X-BAND S-BAND



The 616C, 617X, and 627S Series are designed to interrogate and measure parameters of radar transponders or beacons during final checkout on a launch pad or flight line. They are particularly useful when tracking radars are located at great distances from launch sites. Transmitters and receivers are calibrated and controllable from the front panel in tuned frequency, output power, code spacing and sensitivity. Built-in oscilloscopes are hooded for daylight viewing. A resonant stubhorn antenna is standard. The internal battery supply includes a self-contained charging circuit. Telescoping legs are optional.

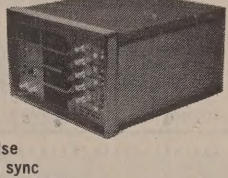


HORN ANTENNA TYPES

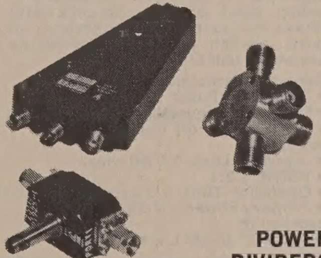
The Model 844X-2 Flared Horn Antenna was developed for use in target drone applications. Radiation coverage is controlled to the desired beamwidths by the flared aperture. A colinear type feed is employed to couple energy from the TNC input connector into the waveguide. Construction utilizes standard aluminum waveguide parts dip-brazed together. The radome is epoxied in position over the aperture. Flared horn antennae of this type are available in other frequency bands utilizing the same design.

DIGITAL CODE GENERATOR

MODEL 766



Generates extremely accurate pulse stream for pulse position code simulation. Pulse stream starts with a sync pulse followed by five data pulses. Each data pulse is independently adjustable for both delay from the sync pulse and for pulse width. Delay adjustable from 0.0 to 999.9 microseconds in 0.1 microsecond steps. Width is continuously adjustable from 0.1 to 1.0 microseconds. Operates from 115 VAC, 50 to 400 Hz. Outputs are TTL positive logic terminated in 50 ohms.



POWER DIVIDERS

Vega produces an assortment of power dividers with two, three or four-way division in addition to a variable power divider. Choice of input connectors (TNC or SMA) is offered in most models. All designs are well engineered and provide low VSWR, low insertion loss, and balanced power division with high power capabilities. Some designs are qualified for missile and satellite use. Frequency ranges extend through X-Band with stripline and coaxial devices.

Vega's antenna and microwave engineering staff specialize in the design and development of aircraft, space and missile components. Among our designs are units intended for RPV control. A single basic system can be used to control virtually any vehicle. Our laboratory utilizes the latest in equipment and suitable antenna test ranges are maintained. Some of the more popular available components are shown above.

RF Filters, Converters, Switches, Amplifiers, Multipliers, Signal Sources, Multicouplers

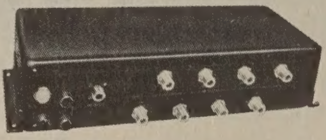
FIXED PAD ATTENUATORS & TERMINATIONS (DC—3 GHz)

FOR TYPES BNC, TNC C, N & OSM CONNECTORS

Integrated line of fixed pad attenuators, terminations and impedance-matching transformers provides means for rapid and accurate division of voltages over the frequency range of DC to 3 GHz, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

General characteristics:

Frequency Range:	DC—3 GHz
VSWR:	1.25:1
Attenuation Accuracy:	±0.5 dB
Impedances (nominal):	50, 75, 90 ohms
Attenuation values:	1, 2, 3, 4, 6, 10, 12, 15, 20 dB (standard)



MULTICOUPLERS

Model HFM Series is designed to meet the needs of most systems.

General features:

High isolation between outputs
High dynamic range
Low noise
Modular construction
Solid-state
Octave bandwidth (if desired)

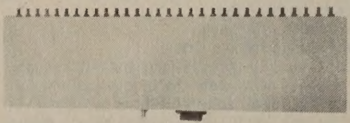
Model PM Series of passive multicouplers provides the ultimate performance in signal distribution.

BROADBAND MULTIPLIERS (5-18,000 MHz)

These units utilize solid state devices. Using the frequency multiplier as the basic tool, lines of Signal Sources, Frequency Synthesizers and Multiplier Chains are now available.

General characteristics:

Frequency Range:	5-18,000 MHz
Bandwidths:	up to 27%
Power Output:	up to 5 watts
Efficiency:	as high as 50%

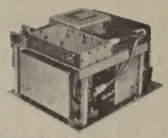


SWITCHES (10-1000 MHz)

A series of computer compatible solid state switches using PIN diodes in a broadband stripline matching structure. Can be directly addressed without interfacing. Units available with equal path lengths to all outputs, providing good phase coherence with phase and amplitude tracking on all ports. Switch matrix configurations are also available.

General Characteristics:

- Frequency Band: 10-1000 MHz
- Switch Configuration: 1x2 to 1x30
- Isolation: 70 dB min. (higher available)
- Insertion Loss: 1.0 dB max.
- VSWR: 1.2:1
- Operation Time: 1.0 μsec.
- Primary Power: ±4.5V, 50ma per crosspoint
- Sizes: 2" to 16"L x 4"W x ½"H



CONVERTERS

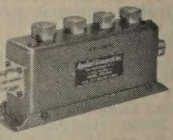
State of the art converters available for military or commercial application throughout the frequency range. All units are constructed to meet mil applications.

TELEMETRY CONVERTERS

These units permit the ready adapting of existing UHF telemetry receiving equipment for use in the 1435 to 1540 and 2200 to 2300 MHz telemetry band with high conversion gain.

General characteristics:

Long term stability:	better than ±.1 PPM over temperature range
Image rejection:	>than 50 dB
Noise figure:	better than 5 dB for 100 mc bandwidth (2.2 to 2.3 GHz)

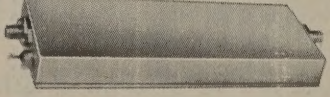


FILTERS (5-12,000 MHz)

Advanced network design techniques have developed filters operating in the frequency range up to 12,000 MHz. With electrical performance approximating theoretical expectations. In addition to Bandpass, Band Reject and Multiplex Filters, advanced network designs are available for antenna couplers, Diplexers, Interdigital Filters and many other types.

General characteristics:

Frequency Range:	5-12,000 MHz
Bandwidths:	up to several octaves
Insertion Loss:	as low as 0.25 dB
Power:	up to 3.5 kW (cw)
Band Reject Notches:	as narrow as ¼ % fo
Band Reject Attenuation:	as great as 75 dB



SOLID STATE RF AMPLIFIERS

(Power, low-noise, broadband, phase matched, linear and high dynamic range)

Constructed to meet mil and missile applications.

General characteristics:

Frequency Range:	up to 4 GHz
Bandwidths:	up to multiple octaves
Phase matching:	to within 1° over an octave
Noise figure:	as low as 1.5 dB
Gains:	up to 120 dB
Power output:	>than 20 watts

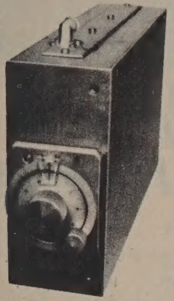
TUNABLE BAND REJECT FILTERS (5-2000 MHz)

Tunable multicontrol band reject filters provide high rejection of more than one and up to eight unwanted signals, or, extreme rejection of one. Low insertion loss and sharp skirt selectivity in the band reject region. Eight knobs and counter readout allow continuous tuning.

General Characteristics:

- Center Frequency: 5-2000 MHz
- Out-of-Band Insertion Loss: 0.5 dB
- Notch Bandwidth: narrow as ¼ % fo
- Notch Depth: 20 dB/section
- VSWR (outside of notch region): 1.5:1
- Size: 24" x 2" x 8"
- Connectors: BNC

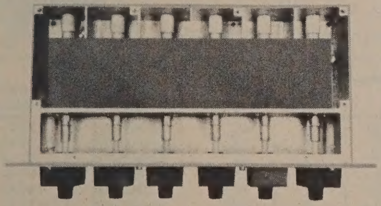


BAND REJECT FILTER (225 to 400 MHz)

Single knob control band reject filters reject unwanted signals, with extreme selectivity through L-band. Tune ranges of nearly an octave can be obtained. Units are tunable over the range 225 to 400 MHz. The bandwidth is >1 MHz at the 60 dB points. Total notch depth is 60 dB. Use of helical resonators provides for high rejection and low insertion loss in the passband of <1 dB. The phase linearity in the passband is achieved by utilizing quarterwave coaxial lines.

PERFORMANCE SPECIFICATIONS

Insertion Loss (out of notch region): 1 dB
Notch Range: 225 to 400 MHz
Typical Notch Specs: Frequency 225.2 MHz;
1 dB bandwidth 11.1 MHz;
Depth 68 dB
Impedance (I & O): 50 ohms
VSWR (I & O) (out of notch region): <1.3:1
Group Delay (out of notch region): <20 ns



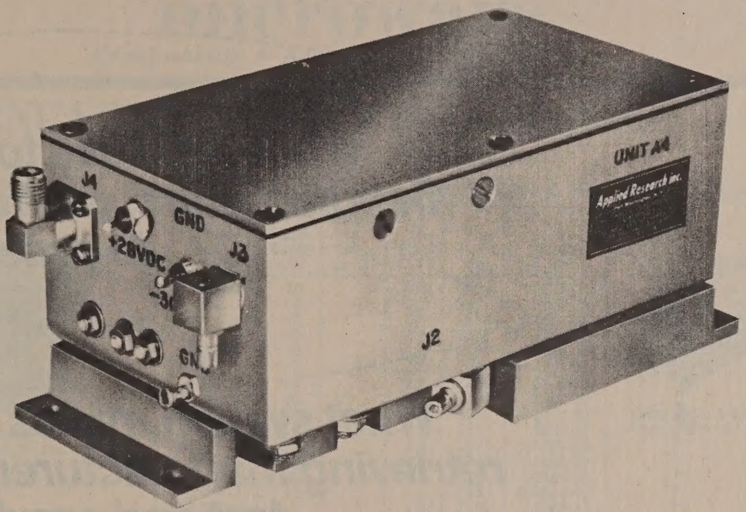
BAND REJECT FILTER (240 to 365 MHz)

Band reject filters operating from the HF range to K-band exhibit a wide bandpass frequency range without reentrances. Resonant elements are independently tuned or ganged to a single knob control. Operation is over frequency ranges greater than one octave, providing high rejection at one frequency or rejection by greater than 15 to 20 dB to as many as six separate and independent frequencies within the band.

Two or more notches can be aligned to adjacent frequencies to vary the depth and/or bandwidth of the band rejection curve. With all rejection notches tuned to a single frequency, the resultant response is such that an undesired signal approximately one percent away from a desired signal is attenuated by more than 70 to 80 dB while the desired signal is passed with only a 1 dB insertion loss.

PERFORMANCE SPECIFICATIONS

Insertion Loss (out of notch region):
<1 dB 100 to 1000 MHz
Bandpass: DC to 1000 MHz
Notch Frequency: 240 to 365 MHz
Typical Rejection below Passband: 240 MHz/
23 dB; 325 MHz/19 dB; 365 MHz/17 dB
Impedance (I & O): 5 ohms
VSWR (I & O): <1.35:1



Frequency Generation thru Multiplication & Phase-Lock techniques

VHF to Ku-Band (10 MHz to 1.5 GHz)

Applied Research offers many proven designs using both techniques. And we're capable of meeting your exact requirements, precisely.

Our Phase-lock loops, comprised of I.C. components, together with RF devices, yield outputs of up to 10 watts at microwave frequencies. And our multipliers are available as passive devices or in combination with amplifiers having multiplication factors of from 2 to 2000. In combination with varactor multiplier devices output in Ku-band can be obtained.

What's more, we can supply crystal oscillators or internal drivers to provide a self-contained source.

SOME PERFORMANCE SPECIFICATIONS

Phase-Lock Signal Source
Output: 494 MHz @ 10 watts
Stability: .005% from internal crystal oscillator

Phase-Lock Synthesizer
Input: 6 MHz & 200 MHz @ 10 dBm each
Output: 218, 224, 230, 236, 242, 248, 254, 260 MHz @ 10 dBm each
Spurious: 60 dBc min.

Ku-Band Multiplier
Input: 45.5 to 46.1 MHz @ 1 dBw; (other inputs available)
Output: 15.3 to 15.5 GHz @ 100 milliwatts
Spurious: 60 dBc min.

C-Band Multiplier
Input: 50.3 to 51.5 MHz @ 1 milliwatt; (other inputs available)
Output: 5030 to 5150 MHz @ 200 milliwatts
Spurious: 60 dBc min.

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

CONTROLLED ATTENUATORS, HIGH SPEED DESIGN

Thin Film Hybrid Packaging Techniques have allowed miniaturization of most of Daico Industries product line. Switches include drivers compatible with TTL or CMOS. Step attenuators are packaged in dual section units. These wide band devices are available in frequency ranges from 10 to 50 MHz, 50 to 500 MHz and 100 to 800 MHz. Custom designed to your specifications. Daico Industries can provide prototypes in one of our stock packages. Please contact us with your requirements.

DAICO INDUSTRIES, INC.

PROGRAMMABLE — PHASE SHIFTERS & ATTENUATORS

Programmable Attenuators and Phase Shifters are comprised of a series of combining elements with either RF relays or solid state switches to perform an additive function of attenuation or delay. The units either switch attentuator pads or closely controlled coaxial line lengths in and out of the series path. Simplicity of design allows the user to specify the desired attenuation sections or delay sections in a standard package alleviating the need for costly non-recurring engineering. Attenuators are available with constant phase shift over the full attenuation range.

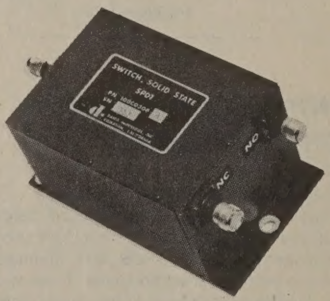
HIGH POWER DIODE SWITCHES



Daico Industries high-power diode switches have been successfully employed in numerous CW and pulse systems. CW power level handling capability to 1000 watts has been achieved in T/R applications. Peak power to 8 KW is available in multipole switches over the range of 50 to 2500 MHz.

Representative designs (adaptable to other frequency ranges and power levels)

Type	Part Number	Freq. MHz	Power Watts CW	Power Watts Peak	Iso (dBmin)	I.L. (dBmax)

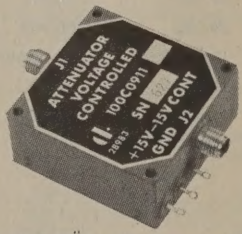
VOLTAGE CONTROLLED ATTENUATORS (ANALOG)



Daico Industries voltage controlled attenuators are analog devices offered in decade band widths from 10 to 1000 MHz. These solid state units will handle power levels up to +10 dBm with no measurable compression. Constant impedance of 50 ohms is maintained at input and output ports over the full attenuation range. Excellent temperature stability of ±0.5 dB is achieved over a 60° range.

Power: ±15 volts at 30 ma
Linearity: ±5%
Control: 0 to 5 volts
Connectors: SMA
Slew Rage: 5 microsec. nom.
VSWR: 1.3/1

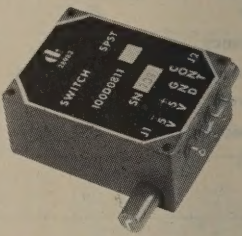
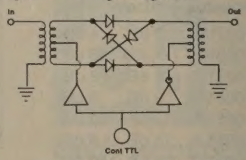
BI-PHASE MODULATORS



The Daico Industries Bi-Phase modulator is available for use in low power and high power applications in the frequency range of 30-400 MHz. The unit exhibits a low insertion loss of less than 1 dB. Built in drivers provide direct interface with digital TTL logic signals.



Part Number	Frequency (MHz)	RF Power (CW)	Insertion Loss (dB)	VSWR (nom)

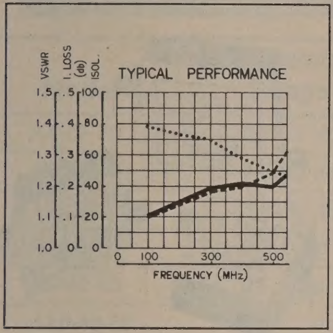
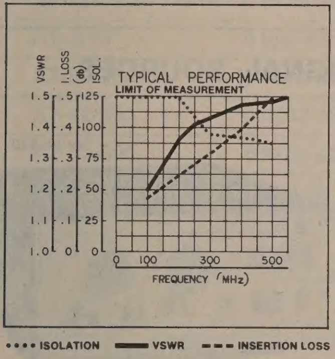
DAICO INDUSTRIES, INC.

RF RELAYS, DC-500 MHz, 50 watts cw

STANDARD



HIGH ISOLATION



Daico Industries RF relays employ hermetically sealed switching elements which provide extreme resistance to the severe environments encountered in military aircraft and communications systems, including 20 g's vibration to 3 KHz, 80 g's shock and altitude in excess of 100,000 ft. A continual test and evaluation program assures switch performance in excess of 20 million operations. These units are operable at extremely low current levels and may be ordered with 6-, 12-, 18- or 24-volt coils. Units also available to 1.5 GHz with 50 ohm termination, reference SP2T P/N 100C0878, Transfer P/N 100C0608.

Here are some of the ways Mini-Circuits achieves high reliability.

At Mini-Circuits Laboratory reliability and quality control are the most important considerations in the manufacture of our products. Some of the procedures which are incorporated to ensure that every unit shipped has quality built in are as follows:

- HTRB Testing — Each diode is preconditioned for 168 hrs. at 150°C with one volt reverse bias applied.
- 100% testing of each diode.
- 100% testing of each unit.
- 100% inspection of every solder connection.
- All transformers and diodes bonded to the header for protection against severe shock and vibration conditions.
- Diode power dissipation derated greater than 50%.
- All components rated for greater than +125°C operation.
- All transformer leads double wrapped.
- Heavy coated wire insulation for Hi-Pot/altitude requirements.
- Completely encapsulated for protection against mechanical shock and vibration and temperature shock.
- Permanent case marking of model number, cannot be removed by cleaning agents or ultrasonic baths.
- Cupro-Nickel case for long lasting finish especially under salt atmosphere conditions.

As a consequence of these considerations Mini-Circuits Laboratory guarantees its products for **one full year** after shipment.

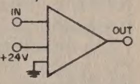
CM	6.8	2.05	3.4	10.49	6.69



The ZHL-1 RF power amplifier is capable of providing approximately 1 watt of power output over a broad frequency range from 2 MHz to 500 MHz. Using an ultra linear Class A design, the ZHL-1 provides a minimum of 16 dB gain over the full frequency range. Gain flatness is typically within ±0.5 dB.

The ZHL-1 is unconditionally stable and can be connected to any load impedance without amplifier damage or oscillation.

Having a two stage design, and incorporating a highly reliable power output transistor enables the ZHL-1 to be designed for reliability of performance.

BNC connectors are supplied. Housed in a 3/16 inch aluminum case, the ZHL-1 is constructed to withstand tough environments. This rugged case includes a hefty heat sink as an integral part of the case construction. Unit weight is 1.38 lbs. (625 grams).

The high performance ZHL-1A is offered at a remarkable price of ½ to ⅓ the cost of competitive units.

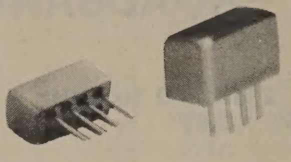
TFM Series

- **FREQUENCY RANGE: 40 KHz TO 2000 MHz**
- **FLATPACK PROFILE: .5″ x .2″ x .2″**
- **PC MOUNT: 0.1″ GRID**
- **PRICE: FROM $11.95 (6-49)**



flatpack

The new TFM microminature series offers a number of significant advantages over other available models: (1) versatility in mounting configuration, (2) simpler PC layout and wiring, (3) smaller size and (4) very low cost.

The TFM series covers the .04-2000 MHz range and features wide bandwidth, isolation greater than 45 dB and conversion loss of 6 dB.

The TFM units require less PC area than a flatpack or TO-5 can. Unit weight is .07 ounces (1.8 grams). Use the TFM series to solve your tight space problems. Take advantage of the mounting versatility— plug it upright on a PC board or mount it sideways as a flatpack. Simplify PC layout and reduce board connections with the TFM series . . . **only four pins have to be wired.**

Packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.2 in.) the TFM series exhibits a typical noise figure of just ½ to 1 dB greater than its conversion loss. It's pins are oriented on a 0.1 inch grid for PC board mounting.

ZFM Series

- **FREQUENCY RANGE: 40 KHz TO 2000 MHz**
- **LOW PROFILE: 1.25″ x 1.25″ x .75″**
- **CONNECTORS: BNC, TNC, SMA (3mm), TYPE N**
- **PRICE: FROM $41.95 (4-24)**

The ZFM series mixers are economically priced while covering the very broad frequency range from .04-2000 MHz. They offer low conversion loss, 6 dB, high isolation 40 dB, and exceptional unit to unit matched performance.

This series is housed in an extremely rugged 1¼ in. square metal case with one connector on each of three sides.

BNC connectors are standard. TNC connectors, a no-cost option, must be specified. Either SMA (3mm) or Type N connectors can be specified at an added cost of $5.00 per unit. Unit weight with BNC connectors is 1.92 ounces (54.5 grams).

Standard mounting is by two 0.125″ (.318 cm) through holes. At no cost two 4-40 tapped holes can be ordered as Suffix A. Or a mounting bracket can be ordered as Suffix B. Add $1.50 to unit price. Case finish is grey epoxy paint.

The ZFM series is offered at a remarkable price of ½ to ⅓ the cost of competitive units. The ZFM series provides performance, quality, and low cost.

DOUBLE-BALANCED MIXERS Standard Level (+7dBm LO)

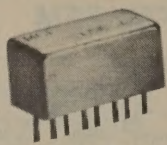
SRA Series

- **FREQUENCY RANGE: 500 Hz TO 2000 MHz**
- **MINIATURE: .8″ x .4″ x .4″**
- **PC MOUNT: 0.2″ GRID**
- **PRICE: FROM $9.95 (1-49)**



The model SRA-1 has become an industry standard through the world and is used by all branches of the Department of Defense, NASA, FAA, and every major communications company. In over 300 different military contracts, over a period of years, the SRA-1 has proven to be one of the most reliable mixers obtainable, even when considering high priced models.

Having a volume of only .128 cu. inches, the SRA series covers a very broad frequency range from 500 Hz to 2000 MHz. Offered at the lowest prices available in the industry, these rugged units provide low conversion loss, 6 dB, high isolation, 40 dB, and exceptional unit to unit matched performance.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their pins oriented on a 0.2 inch grid. Unit weight is .18 ounces (5.2 grams).

Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally every component is bonded to the header and case with silicone rubber to provide super reliable protection against shock, vibration, and acceleration.

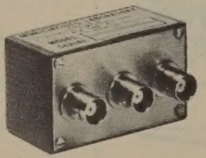
ZAD Series

- **FREQUENCY RANGE: 500 Hz TO 2000 MHz**
- **COMPACT: 2.25″ x 1.4″ x 1.15″**
- **CONNECTORS: BNC OR TNC**
- **PRICE: FROM $24.95 (4-24)**



The ZAD series mixers are economically priced while covering the very broad frequency range from 500 Hz to 2000 MHz. They offer low conversion loss, 6 dB, high isolation, 40 dB, and exceptional unit to unit matched performance.

BNC connectors are standard. TNC connectors are a no-cost option. Please specify optional connectors if required. A mounting bracket can be supplied. Add $1.50 to unit price. To specify add suffix B to Model No.

These rugged units are double shielded to meet tough RFI requirements. The die-cast aluminum case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 2.6 ounces (74 grams).

Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration.

The ZAD series is offered at a remarkable price of ½ to ⅓ the cost of competitive units. The ZAD series provides performance, quality, and low cost.

DOUBLE-BALANCED MIXERS Standard Level (+7dBm LO)

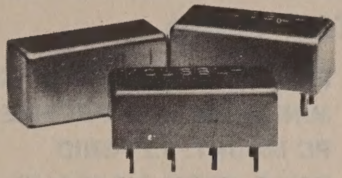
SBL-1 Series

- **FREQUENCY RANGE: 1-500 MHz**
- **MINIATURE: .4″ x .8″ x .3″**
- **PC MOUNT: .2″ GRID**
- **PRICE: FROM $2.95 (500 UP)**



For demanding industrial and commercial applications, where low-cost and high-performance are critical; Model SBL-1 will fill your need. Don't let the low price mislead you. As the world's number one manufacturer of double-balanced mixers, Mini-Circuits' has accumulated extensive experience in high-volume production and testing, a key factor in achieving a successful low cost/high performance line of products. The tough SBL-1 covers the broad frequency range of 1-500 MHz with 6 dB conversion loss and isolation greater than 40 dB. Only well-matched hot-carrier diodes and ruggedly constructed transmission-line transformers are used. Internally, every component is bonded to the header for excellent protection against shock, vibration and acceleration. Weight is .18 oz. (5.2 grams).

Here are some of the steps taken to ensure quality: Every SBL-1 is RF tested two times, every solder connection is 100 per cent inspected under high power microscopes, all transformer leads are double-wrapped, and all components are rated for more than +85°C operation. Of course, our one-year guarantee applies to these units.

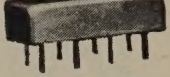
TAK Series

- **FREQUENCY RANGE: 10 KHz TO 1250 MHz**
- **MINIATURE LOW PROFILE: .8" x .4" x .2"**
- **PC MOUNT: 0.2" GRID**
- **PRICE: FROM $17.95 (1-4)**



Only 0.2 inches high, the low profile TAK series of double balanced mixers cover a very broad frequency range from 10 KHz to 1250 MHz. Exhibiting a flat conversion loss, these low profile units have a conversion loss typically 5.5 dB and isolation typically greater than 40 db. Packaged within an RFI shielded metal enclosure and hermetically sealed header, this low profile unit is only .064 cubic inches. The TAK series has its 8 pins located on a 0.2 inch grid. Unit weight is .13 ounces (3.7 grams). Internal components include well matched hot-carrier diodes and extra wideband transmission line transformers supported with silicone rubber for vibration and shock requirements.

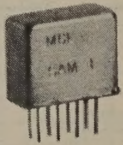
SAM Series

- **FREQUENCY RANGE: 100 KHz TO 1500 MHz**
- **MICROMINIATURE: .5" x .2" x .4"**
- **PC MOUNT: .1" GRID**
- **PRICE: FROM $13.95 (6-24)**



Representing a performance and price breakthrough in microminiature double balanced mixers, the SAM series covers the frequency range 100 KHz to 1500 MHz. Although smaller than mixers presently available, the SAM series offers extra wide bandwidth, low conversion loss, and high isolation. These tiny units have isolation of greater than 55 dB and conversion loss of 5.5 dB. The SAM units require less PC area than a flat-pack or TO-5 can. Unit weight is .07 ounces (1.9 grams).

Packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.4 in.) the SAM series exhibits a typical noise figure of just ½ to 1 dB greater than its conversion loss. Its pins are oriented on a 0.1 inch grid for printed circuit board mounting.

Only well matched hot-carrier diodes and rugged transmission line transformers are used. Internally, silicone rubber is incorporated as an insulator against any wire shorts and to provide protection against shock, and vibration.

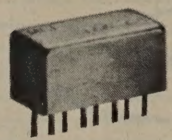
SRA-H Series

- **FREQUENCY RANGE: 50 KHz TO 3000 MHz**
- **MINIATURE: .8″ x .4″ x .4″**
- **PC MOUNT: .2″ GRID**
- **PRICE: FROM $15.95 (5-24)**



Having only 0.1 cu. inches, the high level SRA-H series covers a broad frequency range from 50 KHz to 3000 MHz. Designed to solve severe intermodulation distortion problems, the SRA-H series offers linear operation up to +10 dBm signal input at only 1 dB of compression. Reducing all higher order signal harmonic IMD, the SRA-H series provides a conversion loss of typically 6 dB and isolation of greater than 40 dB.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, this tiny unit has its 8 pins located on a 0.2 inch grid. Unit weight is .18 ounces (5.2 grams).

Internal components include well matched hot-carrier diodes and very broad band, low distortion transformers. Supported with silicone rubber, the SRA-H series withstands high shock, vibration, and acceleration environments.

Priced at ½ to ⅓ the cost of competitive units the SRA-H series incorporates the high reliability associated with every Mini-Circuits mixer.

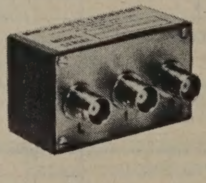
ZAD-H Series

- **FREQUENCY RANGE: 50 KHz TO 3000 MHz**
- **COMPACT: 2.25″ x 1.4″ x 1.15″**
- **CONNECTORS: BNC OR TNC**
- **PRICE: FROM $30.95 (4-24)**



The ZAD-H series mixers cover a broad frequency range from 50 KHz to 3000 MHz. Solving severe intermodulation distortion problems, the ZAD-H series offers linear operation up to +10 dBm signal input at only 1 dB of compression. Reducing all higher order signal harmonic IMD, the ZAD-H series provides a conversion loss of typically 6 dB and isolation of greater than 40 dB.

BNC connectors are standard. TNC connectors are a no-cost option. Specify on order if required. A mounting bracket is optional. Add $1.50 to unit price and suffix B to Model No.

The ZAD-H series is housed in a die cast aluminum case. These rugged units are double shielded to meet tough RFI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 2.6 ounces (74 grams).

Only well matched hot-carrier diodes and ruggedly constructed low distortion transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

Priced at ½ to ⅓ the cost of competitive units the ZAD-H series offers performance, quality, and low cost.

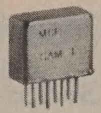
DOUBLE-BALANCED MIXERS High Level (+17dBm LO)

SAM-H Series



- **FREQUENCY RANGE: 100 KHz TO 1000 MHz**
- **PC MOUNT: 0.1″ GRID**
- **MICROMINIATURE: .5″ x .2″ x .4″**
- **PRICE: FROM $19.95 (5-24)**

Representing a performance and price breakthrough in microminiature double balanced mixers, the SAM-H series covers the frequency range 100 KHz to 1000 MHz. Although smaller than mixers presently available, the SAM-H series offers extra wide bandwidth, low conversion loss, and high isolation. These tiny units have isolation of greater than 55 dB and conversion loss of 6.0 dB. The SAM-H units require less PC area than a flat-pack or TO-5 can. Unit weight is .07 ounces (1.9 grams).

Packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.4 in.) the SAM-H series exhibits a typical noise figure of just ½ to 1 dB greater than its conversion loss. Its pins are oriented on a 0.1 inch grid for printed circuit board mounting.

Only well matched hot-carrier diodes and rugged transmission line transformers are used. Internally, silicone rubber is incorporated as an insulator against any wire shorts and to provide protection against shock, and vibration.

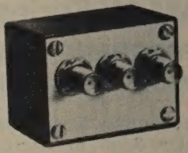
MICROWAVE MIXERS

Balanced (+7dBm LO)

ZMA Series



- **FREQUENCY RANGE: 1000 MHz TO 3000 MHz**
- **COMPACT: 2.25″ x 1.4″ x 1.15″**
- **CONNECTORS: SMA (3mm)**
- **PRICE: FROM $49.95 (1-9)**

The ZMA series mixers are very economically priced while covering the broad frequency range from 1000 MHz to 3000 MHz. They offer low conversion loss, 7 dB, and high LO-IF isolation, 50 dB, over most of its frequency range.

With SMA (3mm) connectors the ZMA series is housed in a die cast aluminum case. These rugged units are shielded to meet tough RFI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 2.6 ounces (74 grams).

A mounting bracket is available. Add $1.50 to unit price and suffix B to Model No.

Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

The ZMA series is offered at a remarkable price of ½ to ⅓ the cost of competitive units. The ZMA series provides performance, quality, and low cost.

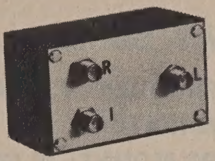
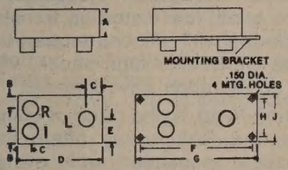
MA Series



- FREQUENCY RANGE: 1 MHz TO 2500 MHz
- COMPACT: 2.25" x 1.4" x 1.15"
- CONNECTORS: SMA (3mm)
- PRICE: FROM $99.95 (1-9)

A price/performance breakthrough in microwave double balanced mixers has been achieved with the MA Series. A new 1 to 2500 MHz mixer, the MA Series offers 9.0 dB conversion loss and isolation of 40 dB.



Housed in a die cast aluminum case, these rugged units are shielded to meet tough EMI requirements. The case is finished with a blue baked enamel per Federal Standard 596 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 2.6 ounces (74 grams).

Mounting bracket is available. Add $1.50 to unit price and suffix B to Model No.

Only well matched hot-carrier diodes and rugged coaxial transmission line transformers are used. Extra special care has been taken to enable these units to be used in environments of severe shock and vibration.

The ZMY series of mixers cover a broad frequency range from 70 KHz to 1000 MHz. Solving very severe intermodulation distortion problems, the ZMY series offers linear operation up to +15 dBb signal input at only 1 dB of compression. Reducing all higher order IMD, the ZMY series provides a conversion loss of typically 6 dB and isolation of greater than 40 dB.

Available with SMA (3mm) connectors, the ZMY series is housed in a die cast aluminum case. These rugged units are double shielded to meet tough RFI requirements. The case is finished with a blue baked-enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 1.02 ounces (34 grams).

A mounting bracket is available. Add suffix B to Model No. and $1.50 to unit price.

Only well matched hot-carrier diodes and ruggedly constructed low distortion transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

Priced at ⅓ to ¼ the cost of competitive units the ZMY series offers performance, quality, and low cost.

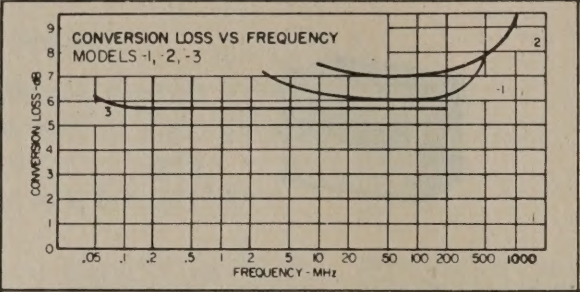
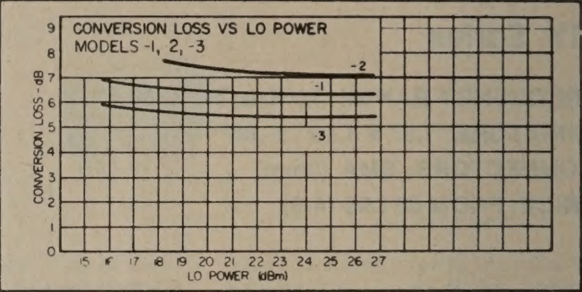
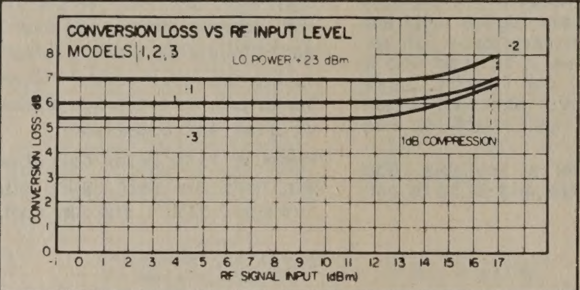
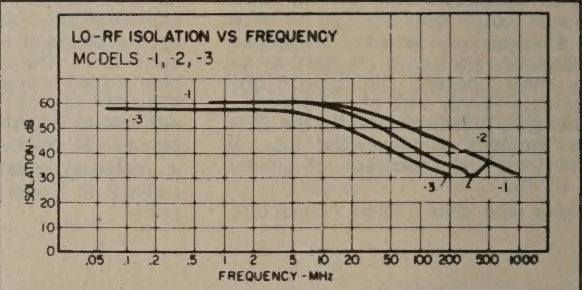
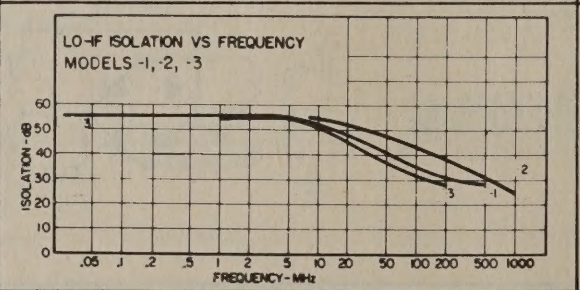
DOUBLE-BALANCED MIXERS Series RAY, ZAY, ZMY

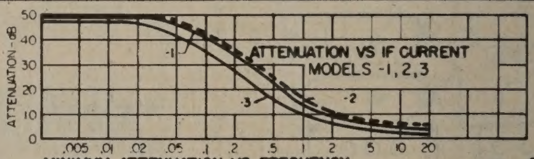


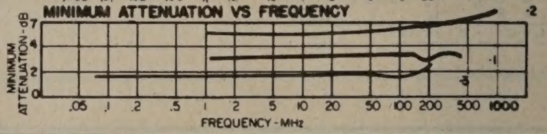








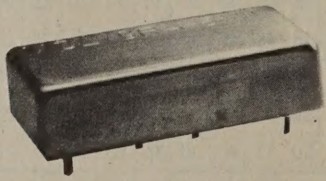




STANDARD LEVEL (+7 dBm LO)

GRA Series

- **FREQUENCY RANGE: 500 Hz TO 500 MHz**
- **LOW PROFILE: 1″ x .5″ x .25″**
- **PC MOUNT: 1″ x .5″ BOARD AREA**
- **PRICE: FROM $10.95 (1-49)**



These double-balanced mixers are exact mechanical and electrical replacements for existing designs, see table. Offered at the lowest price available in the industry these rugged units provide low conversion loss, 6 dB, high isolation 40 dB and exceptional unit to unit matched performance. The units are packaged within an RFI shielded metal enclosure and hermetically sealed header.

For more detailed specifications see Microwaves Product Data Directory or call factory.

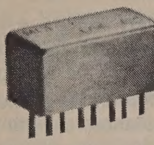
LIMITERS
PLS Series

- **FREQUENCY RANGE: 100 KHz TO 150 MHz**
- **MINIATURE: .8″ x .4″ x .4″**
- **PC MOUNT: .2″ GRID**
- **PRICE: $15.95 (5-49)**



Having a volume of only .128 cu. inches, the PLS series covers a very broad frequency range from 100 KHz to 150 MHz. They have a dynamic range from +6 - +20 dBm and provide exceptionally hard limiting of a .05 dB output change per dB input change.

The PLS series has been designed to provide very small phase variations as the input level is changed. A bias current of about 3 mA from a 50 Ω source is required to excite the PLS limiter.

When the PLS series limiter is used with Mini-Circuits ZHL series amplifiers, a constant +15 dBm output can be obtained from 1 to 150 MHz.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their pins oriented on a 0.2 inch grid. Unit weight is .18 ounces (5.2 grams).

Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internallly, every component is bonded to the header and case with silicone rubber to provide super reliable protection against shock, vibration and acceleration.

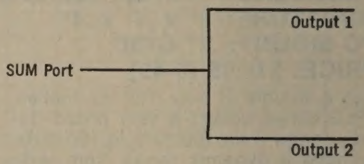
POWER SPLITTER-COMBINERS
Two-Way—0°

These two-way 0° splitter/combiners are high performance broad band hybrid junctions. Internally, terminations and transformers are provided to ensure a very well matched impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the two output (1 and 2) ports. Similarly, signals fed into ports 1 and 2 are vectorially summed at the ouput S port.

They feature exceptionally good amplitude and phase balance between the signals at the 2 output ports. Typically, over most of the frequency ranges, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

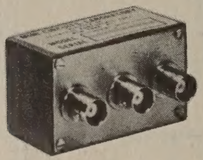
These high performance splitter/combiners are offered at a remarkable price of ½ to ⅓ of competitive units.

Five packaging styles are available to meet a wide range of applications.



Case Styles

ZSC-2 Series



- **COMPACT: 2.25″ x 1.4″ x 1.15″**
- **CONNECTORS: BNC, TNC**
- **PRICE: FROM $24.95 (4-24)**

This rugged package is double shielded to meet tough RFI requirements. The die-cast aluminum case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration. BNC connectors are standard. TNC connectors are a no-cost option. Please specify optional connectors if required. A mounting bracket can be supplied. Add $1.50 to unit price. To specify add suffix B to Model No. Unit weight is 2.6 ounces (74 grams).

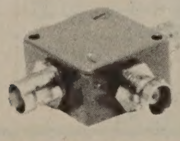
ZFSC-2 Series



- **LOW PROFILE: 1.25″ x 1.25″ x .75″**
- **CONNECTORS: BNC, TNC, SMA (3mm), Type N**
- **PRICE: FROM $31.95 (4-24)**

This series is housed in an extremely rugged 1¼ in. square metal case with one connector on each of three sides.

BNC connectors are standard. TNC connectors, a no-cost option must be specified. Either SMA (3mm) or Type N connectors can be specified at an added cost of $5.00 per unit. Unit weight with BNC connectors is 1.92 ounces (54.5 grams). Standard mounting is by two 0.125″ (.318 cm) through holes. At no cost two 4-40 tapped holes can be ordered as Suffix A. Or a mounting bracket can be ordered as Suffix B. Add $1.50 to unit price. Case finish is grey epoxy paint.

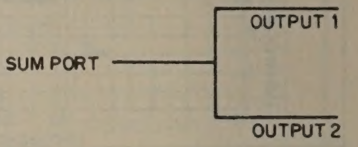
POWER SPLITTER-COMBINERS Two-Way—90°

These 90° out-of-phase two-way power/splitter combiners are high performance broad band hybrid junctions. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. The signals are 90° out of phase at the output ports and are equally divided derivatives of the signal at the S port. Signals fed into ports 1 and 2 are vectorially summed at the output S port.

The units feature exceptionally good amplitude and phase relationship precision between the signals at the 2 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

Ruggedly constructed to provide reliable service under severe environmental conditions. Internally, every component is banded to the header for added strength to protect against shock and vibration.



Case Style

PSCQ-2 Series

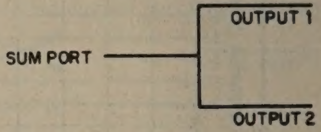
These 180° out-of-phase two-way power/splitter combiners are high performance broad band hybrid junctions. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. For the 180° models signals fed into the input S port are equally divided, 180° out of phase to the two output (1 and 2) ports. Signals fed into ports 1 and 2 are vectorially summed at the output S port.

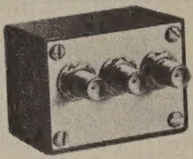
The units feature exceptionally good amplitude and phase relationship precision between the signals at the 2 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

Three package styles are available to suit a wide range of applications.



Case Styles

ZMSCJ-2 Series



- **MINIATURE: 1.5″ x 1.15″ x .88″**
- **CONNECTORS: SMA (3mm)**
- **PRICE: FROM $44.95 (4-24)**

With SMA (3mm) connectors this housing is a die cast aluminum case. This package is double shielded to meet tough RFI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. A mounting bracket is available. Add suffix B to Model No. and $1.50 to unit price.

Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration. Unit weight is 1.02 ounces (34 grams).

- **LOW PROFILE: 1.25″ x 1.25″ x .75″**
- **CONNECTORS: BNC, TNC, SMA (3mm), TYPE N**
- **PRICE: FROM $49.93 (4-24)**

This series is housed in an extremely rugged 1¼ in. square metal case with one connector on each of three sides.

BNC connectors are standard. TNC connectors, a no-cost option, must be specified. Either SMA (3mm) or Type N connectors can be specified at an added cost of $5.00 per unit. Unit weight with BNC connectors is 1.92 ounces (54.5 grams). Standard mounting is by two 0.125″ (.318 cm) through holes. At no cost two 4-40 tapped holes can be ordered as Suffix A. Or a mounting bracket can be ordered as Suffix B. Add $1.50 to unit price. Case finish is grey epoxy paint.

COMMON SPECIFICATIONS

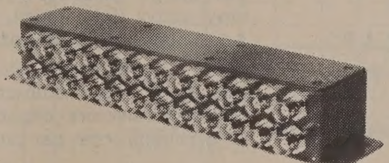
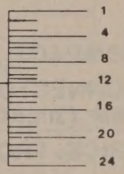
Impedance, all ports: 50 ohms. Internal Load Dissipation: 1 watt. Operating and Storage Temperature: −55°C to +100°C.

TWENTY-FOUR-WAY — 0° ZFSC-24 Series

- **FREQUENCY RANGE: .2 MHz TO 100 MHz**
- **COMPACT: 6.7″ x 1.6″ x 1.5″**
- **CONNECTORS: BNC, TNC, SMA (3mm)**
- **PRICE: FROM $264.95 (1-4)**





These 24-way power splitter/combiners are high performance broad-band hybrid junctions. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the 24 output ports. Similarly signals fed into ports 1, through 24 are vectorially summed at the output S port.

Housed in an extremely rugged metal case to withstand severe mechanical stress, mounting is simple and convenient with the flange design. The units have a grey epoxy paint finish. Unit weight is 21.86 ounces (620 grams).

BNC connectors are standard. Specify TNC if required as a no-cost option. SMA (3mm) connectors can be specified at an additional cost per unit of $25.00.

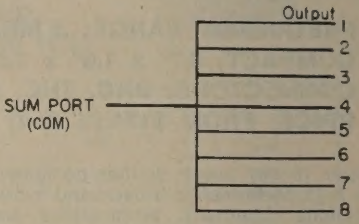
POWER SPLITTER-COMBINERS
Eight-Way—0°

• FREQUENCY RANGE: .5 MHz TO 175 MHz

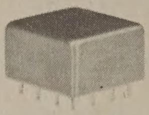
These 8-way power splitter/combiners are high performance broad-band hybrid junctions. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the output ports. Similarly, signals fed into the output ports are vectorially summed at the S port.

Feaured are exceptionally good amplitude and phase balance between the signals at the output ports. Typically over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB. These high performance units are offered at a remarkable price of ½ to ⅓ the cost of competitive units.



Case Styles

PSC-8 Series



- **MINIATURE: .8″ x .8″ x .4″**
- **PC MOUNT: 0.2″ GRID**
- **PRICE: FROM $59.95 (1-5)**

Ruggedly constructed to provide reliable service under severe environmental conditions, internally, every component is bonded to the header for added strength to protect against shock and vibration. These hermetically sealed units perform well under high relative humidity conditions and over temperature extremes from −55°C to +100°C.

Unit weight is .27 ounces (9 grams).

DIRECTIONAL COUPLERS

- **FREQUENCY RANGE: 10 KHz TO 1000 MHz**

These directional couplers are economically priced while covering the frequency range from 10 KHz to 1000 MHz Main-line loss is as low as 0.1 dB and directivity of up to 35 dB. A wide selection of coupling ratios are available and exceptional unit to unit matched performance is standard.

Only well matched and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration.

These units are offered at a remarkable price of ⅓ to ⅕ the cost of competitive units.

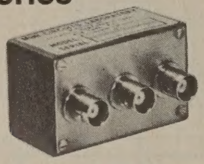
ZDC Series



- **COMPACT: 2.25″ x 1.4″ x 1.15″**
- **CONNECTORS: BNC OR TNC**
- **PRICE: FROM $26.95 (4-24)**

The ZDC series is housed in a die-cast aluminum case. The case is finished with a blue-baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 2.6 ounces (74 grams).

For optional mounting bracket add suffix B to Model No. and $1.50 to unit price.

BNC connectors are standard. Specify on order no-cost optional TNC's if needed.

- **LOW PROFILE: 1.25″ x 1.25″ x .75″**
- **CONNECTORS: BNC, TNC, SMA (3mm), TYPE N**
- **PRICE: FROM $29.95 (4-24)**

This series is housed in an extremely rugged 1¼ in. square metal case with one connector on each of three sides.

BNC connectors are standard. TNC connectors, a no-cost option, must be specified. Either SMA (3mm) or Type N connectors can be specified at an added cost of $5.00 per unit. Unit weight with BNC connectors is 1.92 ounces (54.5 grams). Standard mounting is by two 0.125″ (.318 cm) through holes. At no cost two 4-40 tapped holes can be ordered as Suffix A. Or a mounting bracket can be ordered as Suffix B. Add $1.50 to unit price. Case finish is grey epoxy paint.

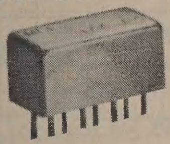
PDC Series



- MINIATURE: .8″ x .4″ x .4″
- PC MOUNT: .2″ GRID
- PRICE: FROM $11.95 (5-49)

Having a volume of only 0.128 cu. in., the PDC Series is offered at the lowest prices available in the industry.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their pins oriented on a 0.2 in. grid. Unit weight is .18 ounces (5.2 grams).

The PDC Series uses the same construction technology as the SRA double-balanced mixer.

Mini-Circuits Laboratory

FREQUENCY DOUBLERS 0dBm to 20dBm Power Range

• FREQUENCY RANGE: 0.05 TO 2000 MHz

The Mini-Circuits' frequency doublers are economically priced while covering the very broad frequency range from 50 KHz to 2000 MHz. They offer a very low conversion loss, 12.5 dB, high spuriout rejection 40 dB. An extra plus is that these doublers give exceptional unit to unit matched performance.

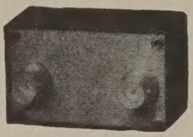
These doublers offer a new degree of freedom in designing frequency multiplier chains. Their many octave band width, and excellent rejection of fundamental and third harmonics enable a significant reduction in filter requirements. In addition, thev operate with 50 ohm impedances at input and output ports and are not very sensitive to input power.

They perform well from 0 dBm to +20 dBm input.

Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration.

Case Styles

GK Series



- **COMPACT: 2.25″ x 1.4″ x 1.15″**
- **CONNECTORS: BNC OR TNC**
- **PRICE: FROM $27.95 (1-4)**

These packages are rugged double-shielded to meet tough RFI requirements. The case is die-cast aluminum finished with a blue baked-enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weight is 2.6 ounces (74 grams).

BNC connectors are standard on the GK series with TNC as a no-cost option (specify on order if required).

A mounting bracket is available. Add suffix B to Model No. and $1.50 to unit price.

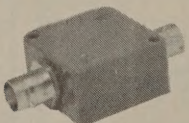
FK Series



- **LOW PROFILE: 1.25″ x 1.25″ x .75″**
- **CONNECTORS: BNC, TNC, SMA (3mm), TYPE N**
- **PRICE: FROM $59.95 (1-4)**

The FK series is housed in an extremely rugged 1¼″ square metal case with one connector on each of two sides.

BNC connectors are standard. TNC connectors, a no-cost option, must be specified. Either SMA (3mm) or Type N connectors can be specified at an added cost of $5.00 per unit. Unit weight with BNC connectors is 1.92 ounces (54.5 grams).

Standard mounting is by two 0.125″ (.318 cm) through holes. At no cost two 4-40 tapped holes can be ordered as Suffix A. Or a mounting bracket can be ordered as Suffix B. Add $1.50 to unit price. Case finish is grey epoxy paint.

RF TRANSFORMERS Wideband (10KHz to 800MHz)

These microminiature wideband RF Transformers cover the frequency range from 10 KHz to 800 MHz. They operate with impedance levels from 12.5 ohms to 800 ohms and provide very low insertion loss, typically less than 0.5 dB.

These microminiature series are available in three basic configurations: (1) the primary and secondary windings are DC isolated (2) the primary and secondary windings are DC isolated and the secondary is center-tapped and (3) the primary and secondary windings are unbalanced (i.e. they both have one end grounded).

Although specified for a 50 ohm primary impedance they may be operated with a primary impedance as low as 12.5 ohms. The impedance matching ratio is essentially constant over the primary impedance range. The frequency response may change somewhat.

ELECTRONIC ATTENUATOR/ SWITCH

- **FREQUENCY RANGE: 1 TO 450 MHz**
- **INSERTION LOSS: 1.5 dB**
- **ISOLATION: 50 dB**

The PAS/ZAS/ZMAS series of electronic attenuator/switches enable attenuation control of RF signals with a maximum of only 20 mA of control current. Due to the specific properties of these attenutors, for a single frequency input all harmonics even and odd order, are virtually eliminated at the output. As a consequence the intercept point is greater than +45 dBm.

The attenuator/switches are economically priced while covering the very broad frequency range from 1-450 MHz. They offer low insertion loss, 1.5 dB, high isolation 50 dB, and exceptional unit to unit matched performance.

ZAS/ZMAS

Having BNC connectors as a standard, the ZAS series has as an option TNC connectors at no cost. Please specify when ordering. SMA (3mm) connectors are supplied with the Series ZMAS. An optional mounting bracket is available. Add suffix B to Model No. and $1.50 to unit price.

The ZAS/ZMAS series is housed in a die cast aluminum case. These rugged units are double shielded to meet tough RFI requirements. The case is finished with a blue baked-enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A. Unit weights are as follows: ZAS 2.6 ounces (74 grams), ZMAS 1.02 ounces (34 grams).

PAS

Having a volume of only .128 cu. inches, the PAS series is packaged within an RFI shielded metal enclosure and hermetically sealed header. These high performance units have their pins oriented on a 0.2 inch grid. Unit weight is .18 ounces (5.2 grams).

ORDERING INFORMATION

Your local representative or distributor is the contact for both sales and service assistance for products listed in this catalog. These local offices have the latest price and delivery information on all models. They can also provide details on ordering procedures, service information, and application engineering data.

Send your order to any of the local sales offices.

Prices listed in this catalog are domestic F.O.B. Brooklyn, N.Y.

Mini-Circuits Laboratory reserves the right to change specifications, models, prices, or designs without prior notice and without liability for such changes.

WARRANTY

Scientific Components Corporation, Mini-Circuits Laboratory division, warrants each new device to be free from defects in material and workmanship. The sellers obligation under this warranty is limited to repairing, or at his option, replacing any device or parts except tubes, semiconductors, lamps, fuses, or batteries, for any device returned to the sellers premise, transportation charges prepaid, within one year after delivery to the original purchaser, and which after examinations by the seller shall prove to be defective within the terms of the warranty. This warranty excludes all other warranties expressed or implied. Seller shall not be liable for any special, indirect, or consequential damages. This warranty does not extend to any device or part which in the opinion of the seller has been subjected to use in violation of seller's instructions or to any misuse, negligence, or accident.

WIDEBAND POWER DIVIDERS & HYBRID TRANSFORMERS

North Hills

POWER DIVIDERS

0.2-110 and 30-225 MHz
2, 4, and 8-way
50 and 75 ohms

Series 01 and 10 Power Dividers are designed for low power applications in the 0.2 to 110 and 30 to 225 MHz frequency ranges.

Hybrid Junction Techniques are employed to assure superior isolation and minimal insertion loss. VSWR is optimized at all ports.

50 and 75 ohm impedances are standard. Other impedances available on special order.

SPECIAL UNITS — 10 Hz to 1 GHz

In addition to our standard lines, North Hills custom designs to specific requirements. Examples of these include:

- Active unity – or high-gain power splitters, adders and combiners.
- High power dividers.
- Power dividers for video applications with response down to 1 kHz.
- Non-standard impedances.

TELEMETRY AND COMMUNICATIONS SERIES

This Series of microwave transistor amplifiers is designed for optimum performance in the commonly used communication and telemetry bands. Special emphasis is placed on the gain and noise characteristics. The amplifiers provide low noise amplification with high reliability under adverse operating conditions.

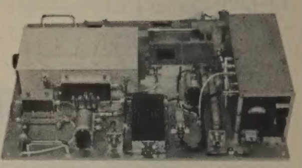
Capability in PARAMETRIC AMPLIFIERS

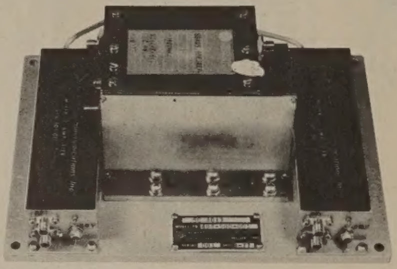
and OTHER MICROWAVE PRODUCTS

Scientific Communications' parametric amplifiers cover a wide range of applications including radar, telemetry, radio astronomy and satellite communications. Cryogenic or uncooled units are available in frequency ranges from below 500 MHz to above 30 GHz and solid state pumps are standard in most bands. Fixed-tuned, tunable, or broadband amplifiers with band-widths of 10% or more can be supplied. Standard models are available in many radar and telemetry bands; in addition, SCI can design amplifiers to suit nearly any realizable set of customer specifications. Scientific Communications offers state-of-the-art performance in noise temperature and other parameters. Amplifiers are supplied to operate in adverse environments and meet rigid military specifications. These low-noise amplifiers provide a cost-effective answer for stringent applications. SCI delivers production quantities of parametric amplifiers to tight delivery schedules. During peak production the company consistently maintains a quick response capability as well as the flexibility to undertake extensive development efforts.

RF Front Ends Scientific Communications also offers a custom capability to design and manufacture RF subassemblies for a variety of receiver applications. Typical subassemblies include the combining of preamplifier and down-converter or the incorporation of such components as filters, limiters, power dividers and detectors. Custom assemblies previously supplied have ranged from a preselected/isolated amplifier to a complete RF front end for a radar retrofit. SCI maintains the flexibility to provide fast turn-around on urgent requirements without losing cost-effectiveness on production-oriented programs.



RF FRONT END



DOWN CONVERTER

Down-Converters Scientific Communications offers a series of compact, rugged, solid state down-converters covering the common telemetry, radar and communications frequency ranges. Because of the small size of the units, they are ideally suited to applications where volume and weight are critical. The series contains an integral crystal-controlled local oscillator and includes a preselect filter and isolator.

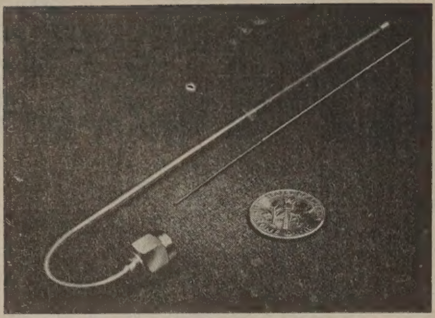
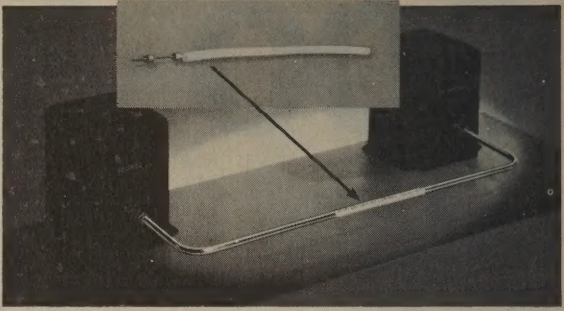
Cable — TELENG

MICRO-COAX® The RELIABLE Semi-



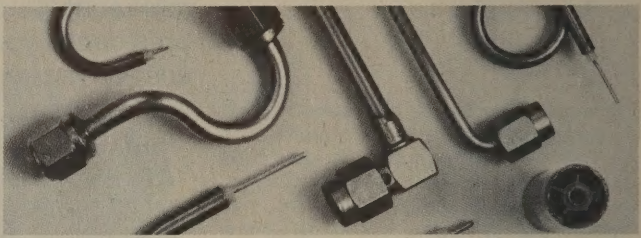
IMPEDANCE TRANSFORMER IN-A-CABLE adds reliability and eliminates up to 4 connectors. Designed for use between low impedance solid state sources and standard 50 and 75 ohm interconnections.

MICROWAVE LOW-PASS FILTER IN-A-CABLE gives reliability of a monolithic seal and can eliminate up to 4 connectors. Use wherever rigid tubular designs are employed.



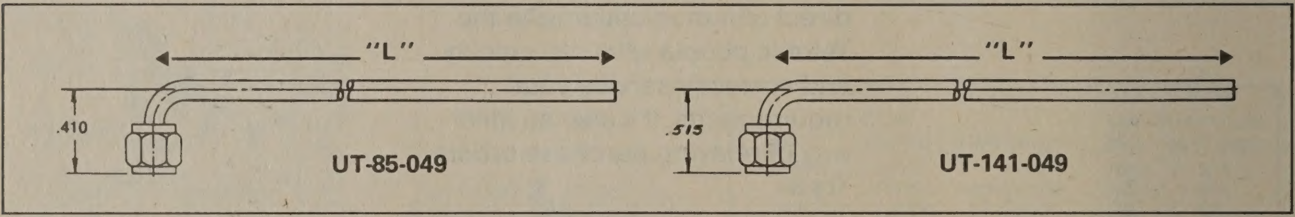
MICRO-COAX CABLE ASSEMBLIES

The usefulness of Micro-Coax semi-rigid coaxial cable is increased by its ability to be formed or fabricated into simple or complex geometric assemblies. Coiling, bending, stripping, and soldering, attaching connectors and other secondary operations result in delivery of maximum power in minimum space. The fabrication potential of Micro-Coax Cable is practically limitless, meeting mechanical and environmental requirements in phase matching, attenuation and VSWR optimization, assembly, encapsulating and insulating, and delay calibration. UTI provides finished assemblies, pretested and ready for installation.



LOW-PROFILE RIGHT-ANGLE MICRO-COAX CONNECTOR ASSEMBLIES

Reduce space requirements • Economical • Lengths from 2" to 48" • Silver plate is standard • Tin plate on special order



STANDARD GENERAL PURPOSE 50 OHM MICRO-COAX CABLES

Typical applications include: Microwave transmission lines • Amplifier shielding or isolation • Totally shielded interconnections • Microwave delay lines

Rigid Coaxial Cable MICRO-COAX®

10, 15, 25, 70, 75, 93 and 95 OHM MICRO-COAX CABLES

Typical applications include: CATV amplifier wiring • Capacitor sections • Low impedance matching for solid state units • Quarter-wave transformer sections

Footnotes:

3 Ø — 3 Phase Motors
4 Ø — 4 Phase Motors
5 Ø — 5 Phase Motors
S — Single
D — Dual
HS — Half-Step

C & DC — Clock Input with Direction Control Line
FC & RC — Forward and Reverse Clock Lines
M — Manual Pulse Generator
SP — Speed Ramping Pulse Generator for Ramping
Multimode — Single, Dual and Half-Step

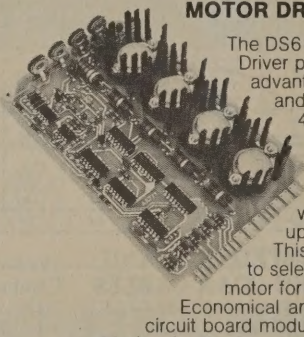
Note: Some motor manufacturers refer to their 4Ø motors as 2Ø; others as 8Ø.

MODULAR AND PCB-MOUNTED DRIVERS AND CONTROLS FOR 2-8 PHASE STEPPER MOTORS

- **Multi-mode control for single, dual or half-step excitation**
- **May be used with all standard makes of stepper motors**
- **Up/down pulse generator enables speed ramping to 6000 PPS**
- **All units operate over wide supply voltage range**
- **36 standard driver models, 11 controller styles available from stock**

A complete selection of standard electronic stepper motor drives is offered by ANAHEIM AUTOMATION, drawing upon many years of experience in design and stepper system applications. With proper selection, stepping motor performance may be significantly improved. Modifications to these units or custom driver systems are readily made to answer unique requirements.

MOTOR DRIVER/*DS61284*



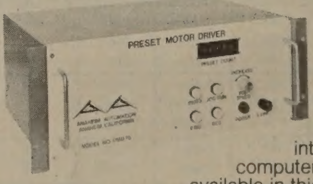
The DS61284 Multimode Motor Driver provides the combined advantages of multimode drive and speed ramping for 4-phase stepper motor operation. This driver operates from a wide range in power supply voltages and will drive motors requiring up to 6.5 Amperes/Phase. This flexibility allows the user to select the most appropriate motor for his application. Economical and compact, the printed circuit board module plugs into a standard 22 pin edge card connector, and is easy to mount.

PRESET MOTOR DRIVER/*PMD73*

PRESET MOTOR DRIVER

The Preset Motor Driver PMD73 Series provides the user with the ability to preselect the number of steps a motor is to travel. Three modes of motor operation are available: Run, Jog, and Index. An up/down pulse generator furnishes the signals necessary for speed ramping to obtain optimal motor performance automatically.

PRESET MOTOR DRIVER/*RACK MOUNTABLE*



The PMD76 Series is contained in a Rack-Mountable cabinet, designed for applications requiring special features, packaging and operational flexibility. Special interfaces, including computer control, are available in this series.

"Standard design which can be modified to meet customer requirements."

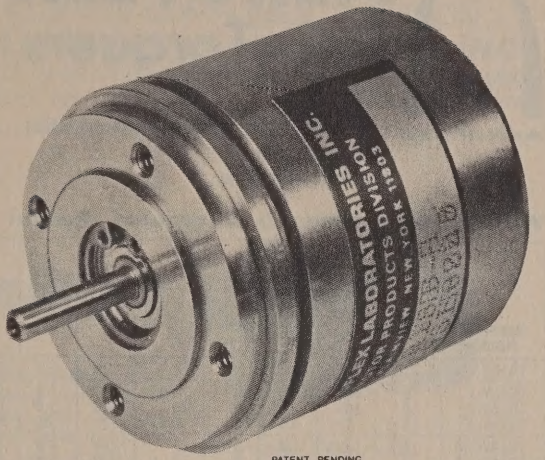
AEROFLEX

brushless DC motors— featuring:

- **A complete package with fully integrated electronics.**
- **Solid state switching techniques and patented solid state sensing.**
- **Inverted rotor-to-stator relationship.**
- **Speed independent non-contacting rotor position sensors.**



PATENT PENDING

You no longer have to endure the penalties of brush wear and high power loss. You can have the high starting torque/speed characteristics of conventional, permanent magnet DC motors —plus the brushless advantages of greater reliability, higher efficiency, lower operating temperatures, and a service life limited principally by bearing wear. Also, being brushless, they run without fear of sparking so they can be used in exposive, corrosive and other hostile environments.

Aeroflex brushless DC motors have the high starting torque and linear speed/torque characteristics of conventional, permanent magnet, DC motors. The solid-state commutation circuitry is available with integral speed regulation, to meet custom requirements.

The motor can be supplied for operation from a fixed polarity voltage and rotation in either direction, or with the direction of rotation reversing with reverse polarity voltage.

Fan and blower motor applications can benefit by the higher reliability of the Aeroflex brushless DC motors. In addition, these motors may be used in AC blower applications without the rotational speed/line frequency limitations of AC motors.

In instrumentation and control applications, their reliability and long life can significantly enhance total system performance. They are compatible with pulse modulation and pulsed variable rep-rate types of servo control techniques.

Contact Aeroflex Motor Applications Engineering for assistance.

TYPICAL PERFORMANCE DATA

FRAME SIZE	8	11	15	25	33
Stall Torque (oz/in)	.2-.8	1-1.5	1.5-8	3-13	5-40
Stall Power (watts)	6	8	14-22	23-35	50-110
Rotor Moment of Inertia (gm cm^2)	.5	1.0	5.0	140	750
Rated Torque (oz/in)	.1-.4	.5-.75	1-5	1.75-8	3.5-25
Speed at Rated Load (rpm)	2,500/5,000	2,500/5,000	150/5,000	150/5,000	150/5,000
No Load Speed (rpm)	5,000/10,000	5,000/10,000	3,000/10,000	3,000/10,000	3,000/10,000
Weight (oz.)	2.5	5.0	10	25	65
Dim. "A" Length	1.25	1.75	2.00	4.00	5.00
Dim. "B" Dia.	.750	1.062	1.437	2.75	3.31
Dim. "C" Pilot Dia.	.500	.825	.875	N/A	N/A
Dim. "D" Pilot Length	.040	.062	.040	N/A	N/A

NOTES:

1. Designed to meet military and industrial specifications.
2. Available with speed regulation to ±1% for variations in load torque and supply voltage.
3. Shaft details as requested.
4. Synchro type mounting optional.
5. Excitation voltage - standard ratings available.
6. Peak torque ratings approx. 40% above continuous value.
7. Efficiency up to 75%.
8. Consult our engineering staff for other ratings.

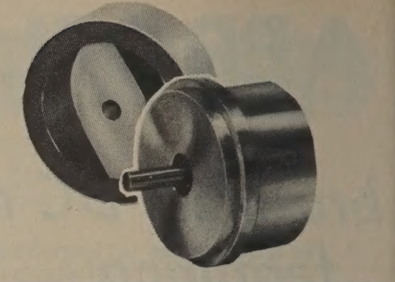
AEROFLEX *brushless* D.C. Torquers



FEATURES:

AEROFLEX

- No commutator brush or contact friction
- Unlimited life
- Infinite resolution
- Direct Drive
- No radio noise or explosion hazard
- No motor ripple or "slot lock"

Full Rotation *brushless* D.C. Torque Motors

A torque delivery system designed to achieve maximum power efficiency within a minimum of space, weight and power. It consists of a permanent magnet brushless DC torquer mechanically coupled with a brushless resolver.

GEAR MOTORS

R.C. offers a wide range of integral motor-gearhead combinations with synchronous and induction motors as well as Servo motors in all R.C.I. frame sizes including 8, 10, 11, 15, 18, on up to 3⅞ O.D.

- Precision engineered for long life.
- Torque up to 4000 in oz.
- All Ratios.
- Backlash: 30 minutes maximum.
- Temperature Range: —55°C to + 150°C.
- Lubrication: MIL-L-6085, MIL-G-3278.
- Environmental Testing: MIL-E-5272.
- Mechanical slip clutch available on request.
- Ball bearings are stainless steel ABEC 5 or better as reqd.
- All gears precision class 2 or better per AGMA 236.04

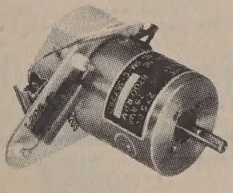
INDUCTION DRIVE MOTORS

Powerful • Rugged • Extremely Reliable • Versatile in Application

Frequencies:	50-60-400 cps • Variable Frequency • Dual Frequency
Speeds:	450 thru 22,000 rpm • 1-2-3 Speeds
Horsepower:	1/2000 to ¼ H.P.
Voltages:	To 440V AC • Single or Dual Voltages
Phases:	1-2-3 • Reversible or Unidirectional
Bearings:	Precision Life Lubricated Ball Bearings
Mounting:	Face, Base, Flange, Servo
MIL SPECS:	Exceed MIL-M-7969, MIL-M-17059, MIL-M-13787, MIL-E-16400, MIL-E-5400, MIL-E-5272, MIL-STD-202 Also for quality commercial applications
Life:	In excess of 10,000 hours in many designs
Gearheads:	Available with all models Hundreds of models available

BRUSHLESS DC MOTORS

• IMPROVE YOUR PRODUCT • REPLACE BRUSH TYPE MOTORS, FANS, BLOWERS.



OPERATE FROM DC POWER SOURCES • SOLAR CELLS.

LIFE — extremely long — no brushes to replace — no brush dust.

SAFER — no sparking in explosive atmosphere.

RFI — minimal.

MIL SPEC APPROVED for severe environments.

SPEEDS — wide selection as required.

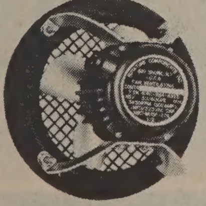
QUIET — no brush noise.

EFFICIENT — low input power.

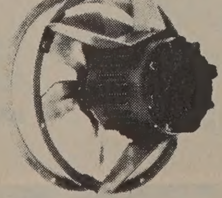
SUPERIOR at high altitudes.

USES — Aircraft — Submarines — Spacecraft — Ground Equipment — Any Electronic Equipment.

FANS

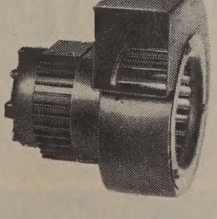


- 50/60 Hz
- 400 Hz
- 1 or 3 Phase

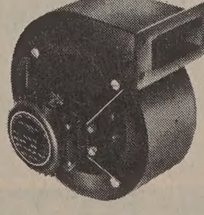


- 115-208 Volts
- 3300-11,000 RPM
- 40-1000 CFM

BLOWERS



- Single
- Double
- 115-208 Volts



- 50-60 Hz
- 400 Hz
- 1 or 3 Phase

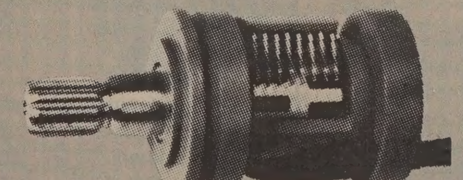
ENCODERS A wide variety of encoders is available: T / B, BCD, Gray, etc. Special encoders may require nominal tooling charges. Encoders can be supplied with built-in logic circuitry. Sizes: 8-33.



SWITCHES When close accuracy, repeatability and size are important, specify Airflyte rotary switches for timing and positioning applications. Successfully replaces snap action switches and cams. Pre-set to eliminate installation time. Zero hysteresis.

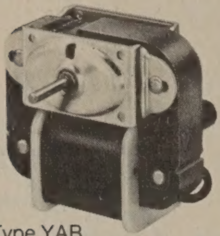
A-C MOTORS

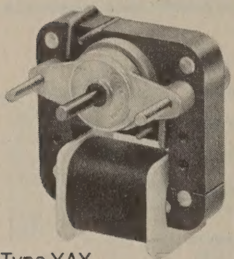
Unidirectional



Type YAB

TYPE YAB

Rated hp	.0017 to .012
Depth	39.69 to 57.15 mm
Dimensions	71.44 x 65.88 mm
Remarks	51.59 mm mtg. centers



Type YAX

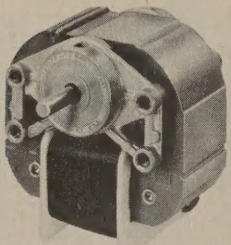
TYPE YAX

Rated hp	.002 to .013
Depth	38.46 to 67.03 mm
Dimensions	73.41 x 63.5 mm
Remarks	47.63 mm mtg. centers

TYPE YAR

Rated hp	.005 to .042
Depth	48.42 to 84.93 mm
Dimensions	84.14 x 82.55 mm
Remarks	Our highest powered A-C motor

Unit Bearing



Type YAR

TYPE YAU

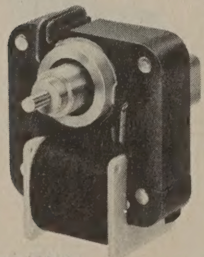
Rated hp	.003 to .008
Depth	39.29 to 55.17 mm
Dimensions	74.61 x 63.5 mm
Remarks	For low noise and long life

Reversible

TYPE YAE

Rated hp	.00015 to .006
Depth	39.69 to 49.21 mm
Dimensions	76.2 x 73.03 mm
Remarks	Mechanical or electronic switching

Synchronous

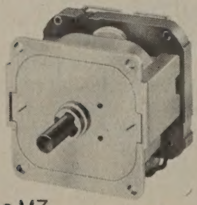


Type YAU

TYPE YAJ

Rated hp	.003 to .009
Depth	39.69 to 57.15 mm
Dimensions	61.12 x 65.88 mm
Remarks	For precise timing

GEARMOTORS*



Type MZ

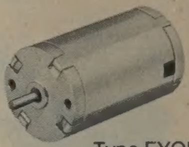
TYPE MZ

Torque output ..	up to 15 lb-in.
Gear ratios	3.33:1 to 3125:1
Remarks	Face mounting with on-center output shaft

*Several models available, including pancake gearheads.

D-C MOTORS

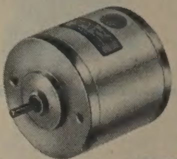
Ungeared



Type FYQM

TYPE FYQM

Voltage range ..	6 to 32 v d-c
Speed/torque ..	3000 rpm at 1.5 oz-in.
Max. diameter ..	32 mm
Length	44.45 to 57.15 mm
Remarks	Permanent magnet

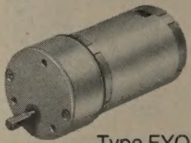


Type CYQM

TYPE CYQM

Voltage range ..	6 to 32 v d-c
Speed/torque ..	2700 rpm at 4 oz-in.
Max. diameter ..	50.8 mm
Length	50.8 to 63.5 mm
Remarks	Permanent magnet

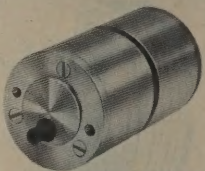
Geared



Type FYQH

TYPE FYQH

Speeds	0.4 to 1900 rpm
Torque........	up to 3 lb-in.
Max. diameter ..	35.05 mm
Length	Depends on base motor and gear ratios



Type CYQH

TYPE CYQH

Speeds	0.3 to 1000 rpm
Torque........	up to 15 lb-in.
Max. diameter ..	50.8 mm
Length	Depends on base motor and gear ratios

Type FYQM and CYQM motors are available with a variety of pancake gearheads.

Speed-Controlled Units

Type FYQM and CYQM motors are available with a centrifugal type governor for mechanical speed control. Both motor types can also be supplied with an integral brushless tachometer generator, providing voltage feedback for electrical speed regulation.

TYPE FYQM

Reg. speed range	400 to 4800 rpm
Torque.............	up to 1.5 oz-in. at 3000 rpm
Max. diameter	32 mm
Length	53.09 to 56.39 mm
Remarks	Available with Type FYQH gearhead

TYPE CYQM

Reg. speed range	400 to 4800 rpm
Torque.............	up to 6 oz-in. at 1800 rpm
Max. diameter	50.8 mm
Length	57.15 to 76.20 mm
Remarks	Available with Type CYQH gearhead

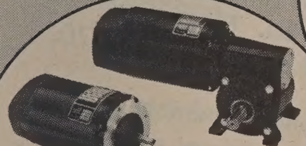
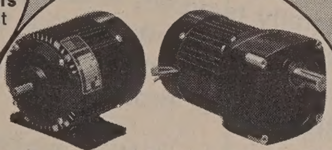
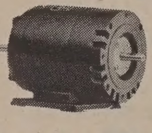
42A Permanent Magnet D-C Motors and Parallel Shaft Gearmotors. Just 4.30″ in diameter. Motors TENV ⅛, ⅙, ¼ Hp. Gearmotors have helical steel gearing.



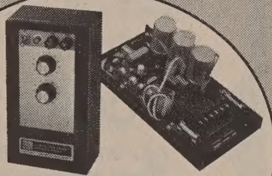
New 32A Permanent Magnet D-C Motors and Right Angle Gearmotors. Only 3.55″ in diameter. TENV Hp 1/12 thru ⅛ at 2500 Rpm. Many gear ratios available.



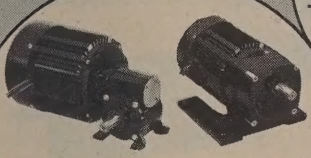
42R Induction Motors and Parallel Shaft Gearmotors. Motors 1/20 thru ¼ Hp. All A-C winding types. Gearmotor ratios to 300:1. Helical steel gearing.



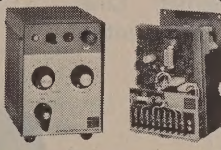
Torque Motors. Selected K-2, N-line and 48R motors for holding, positioning and winding applications. Intermittent and continuous duty. Standard ratings 7 thru 92 Oz-in.



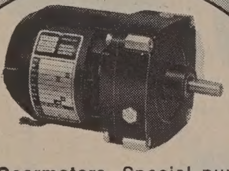
Encased and Chassis-type Speed Controls for Permanent Magnet Drives. Provides not only speed adjustment, but also adjustment of torque output. Available from stock.



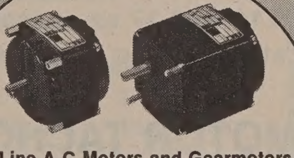
48R Induction Motors . . . Right Angle and Parallel Shaft Gearmotors. Motors thru ⅓ Hp. Available 115/230V in 50 or 60 Hz. Gearmotor ratios thru 30:1.



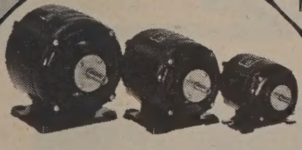
Encased and Chassis-type D-C Motor Speed Controls for Shunt Wound D-C Control Motors and Gearmotors. Nine encased models and four chassis models stocked.



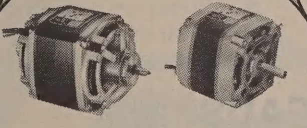
N-1S Gearmotors. Special purpose gearmotors for applications not requiring the ruggedness of the N-1D. In-line shaft. Only 3.41″ square. 100 lot minimum order.



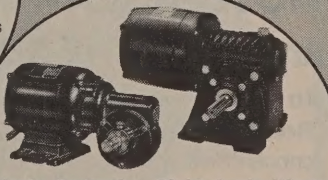
K-2 Line A-C Motors and Gearmotors. Instrument quality. Normal slip, high slip, and synchronous windings. Gearmotor torques thru 120 Oz-in. Only 2.405″ square. Stocked.



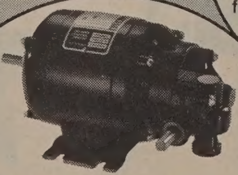
N-Line Motors. Three basic sizes; 3.36″, 4.50″ and 5.68″ in diameter. Stock ratings from 1/125 thru ¼ Hp. All popular windings are available.



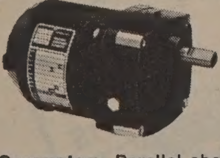
K-4 Motors. Special purpose motors for high volume applications. Standard ratings from 1/60 thru 1/20 Hp. Only 2.88″ square. 500 lot minimum order.



Single Reduction Right Angle Worm Gearmotors. 6 frame sizes with stock ratings to over 200 Lb-in. Ratios thru 60:1. Ample reserves for overloads.



N-1R Gearmotors. Single and double reduction right angle worm gearmotors. Stock ratings thru 5 Lb-in. Many ratios available for a wide range of speed selection.



N-1D Gearmotors. Parallel shaft helical and spur gearing. Ratings thru 40 Lb-in. Ratios thru 900:1. Only 3.41″ square.

Double Reduction Right Angle Worm Gearmotors. Provide high torques at low speeds. Stock ratings over 200 Lb-in. Ample reserves for overloads.

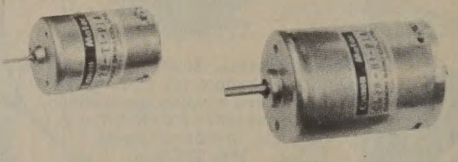
Canon®

D.C. MOTORS for OEMS

subfractional h.p.

Canon offers OEM users one of the world's broadest selections of subfractional h.p. d.c. motors at very competitive prices. Choose from literally hundreds of existing models, or, if you are a large quantity user, we'll supply units to your precise specs. Stall Torques range from 1/2 to 35 oz.-in., speeds to nearly 10,000 rpm ungeared. Most are available for broad voltage ranges, typically: 3-12, 3.3-16, 6-24, 24-70.

Mountings: Most are tapped for front mount. Others available.
Shafts: Length, flats, pinions, pulleys, etc. to customer specs.



IRON CORE TYPE

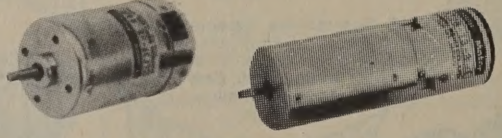
to 35 oz.-in. torque

Ungoverned and Mechanically Governed. Line includes low cogging models and models with extra long life brushes

BRUSHLESS TYPE

0.14 to 4.17 oz.-in. torque

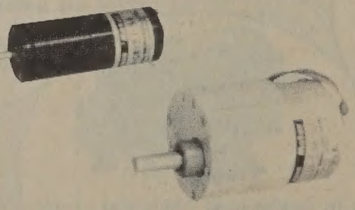
with or without electronics



MOTOR TACHOMETERS

to 20 oz.-in. torque

a.c. or d.c. output



MOTOR GEARHEADS and GEARHEADS

to 140 oz.-in. output torque

Reductions from 1/5 to 1/3000 offset or concentric shafts. Mate with most Canon Iron Core and Brushless Motors.

Short Form Specifications Catalog and Data Sheets on individual motors available.

DESCRIPTION

Rapid-Syn Drivers are solid state pulse-to-step converters capable of providing bi-directional operation of the stepping motor.

All Rapid-Syn Drivers listed, except Model M2301F, are designed to drive 3 Phase and 4 Phase motors regardless of type or step angle of the motor. Model M2301F is a bi-polar driver designed for 4 Phase PM motors.

All models require 2.4 to 30 volts positive going pulse with a minimum pulse width of 20 micro-seconds (TTL compatable). For rated input voltage and maximum current rating of various models, refer to table.

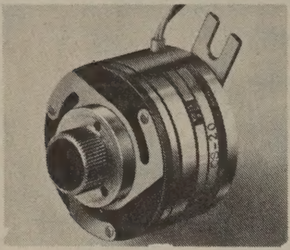
CLUTCHES & BRAKES ELECTRO MAGNETIC

SERIES 11 AND SERIES 20 . . . Two complete series of small clutches, brakes and clutch couplings for industrial and business machine applications.



CHARACTERISTICS	SERIES 11	SERIES 20
Diameter	1.25"	1.78"
Length (approx.)	1.25"	1.65"
Static Torque without burnishing	5 lb. in. min.	12 lb. in min.
Dynamic or slip torque	5 lb. in. at 1800 RPM 4 lb. in. at 3600 RPM	12 lb. in. at 1800 RPM 8 lb. in. at 3600 RPM
Mechanical response time		
65% rated torque	20 MS*	27 MS*
100% rated torque	40 MS*	45 MS*
Electrical response time	5 MS*	12 MS*
Power requirement	5 watts	6 watts
Coil voltages available	6,12,24,90 VDC	12,24,90 VDC
Standard bore sizes	3/16", 1/4", 5/16"	1/4", 5/16", 3/8"
Standard lead wires	26 AWG 12" L	22 AWG 12" L

*With forcing voltage the response time can be reduced and torque increased.

For further information ask for Bulletin #11/20

FEATURES

- High torque in compact package
- Fast response
- Ease of maintenance
- Available as stock items
- Standardized design at competitive price
- Flange or shaft mounting
- Long life
- Zero backlash armature with spring release
- **NO BURNISHING REQUIRED**

HYSTERESIS CLUTCHES/BRAKES

A continuous slip device capable of providing precise, infinitely adjustable torque control. Units are basically direct current sensitive, having excellent reliability, repeatability and linearity. Described below are some of the infinite variations of Hysteresis Brakes manufactured. Also available are a similar wide variety of clutches.

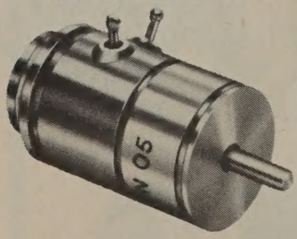
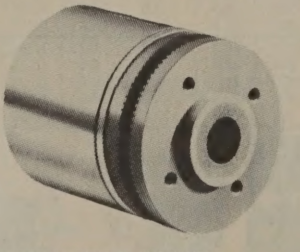
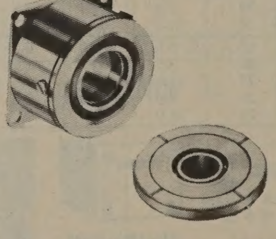
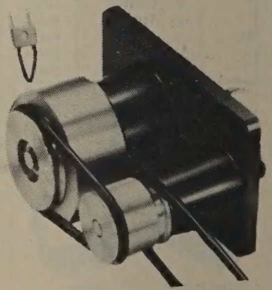
For further information ask for Bulletin # HCB

OTHER AVAILABLE UNITS









SUBMINIATURE CLUTCHES/ BRAKES

Fast response, low drag torque, high torque-to-inertia ratio, zero backlash. Torque from 3.5 to 240 oz. in. and response time from 4 to 50 mili. sec. Variety of designs for use as clutches, brakes, or clutch/brake combinations.

For further information ask for Bulletin #SCB

TOOTH TYPE CLUTCHES

Positive engagement and high torque to weight ratio make them ideal for airborne and space applications. Clutches and brakes available to 700 lb. in. Unit shown rated at 250 lb. in. in a 2-1/8" diameter x 2" long package.

For further information ask for Bulletin # TTC

APILON® FACED CLUTCHES and BRAKES

For severe service over extended periods of time. Special APILON ceramic friction facing has exceptionally high wear resistance and heat dissipation properties. Life expectancy of APILON faced units is in the area of 100 million operating cycles. The mechanical life of the unit matches the extraordinary life of the facings.

For further info ask for Bulletin # AFC

CUSTOM-DESIGNED UNITS

Delevan can provide units to meet the highly specialized requirements of virtually any commercial, industrial or military application. Here is a clutch/brake used to incrementally move recording type. The molded frame not only supports the clutch and brake, but also includes an idler pulley for a secondary speed output.

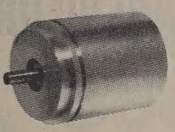
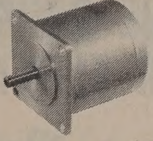
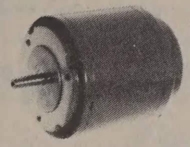
STEPPING MOTORS



Sizes 8 through 20 VR and PM stepping motors, 7.5, 10, 15, 22.5, 30, 45, and 90 degree step angles with a wide range of voltage and torque ratings. Heat sinks and mechanical dampers available.

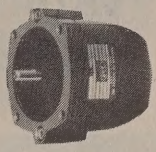


Size 23 (2 7/32″ dia.) and size 34 (3⅜″ dia.) permanent magnet stepping motors with 1.8, 1.875, 2, 2.5, 5, and 7.5 degree step angles. Torque ratings from 50 to 150 oz. in. for size 23, and 150 to 450 oz. in. for size 34.



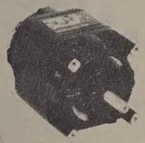
Size 42 (4 3/16″ dia.) permanent magnet stepping motors with 1.8 degree step angles. Torque ratings from 150 to 400 oz. in.

TACHOMETER ALTERNATOR

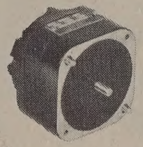


Model J15. Rugged PM design for maintenance free industrial applications. Output 5 volts/1000 RPM. 2.5% max. distortion, 0.1% linearity.

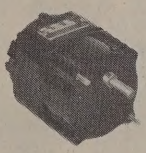
INSTRUMENT MOTORS AND GEAR MOTORS



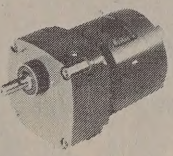
Holtzer Cabot Model M instrument motors with ratings up to 1/20 HP. Available as induction, torque, and synchronous motors in either face or foot mount. Only 2⅞″ sq. Popular for floppy disk drive applications.



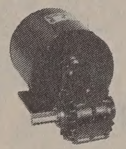
Holtzer Cabot Model L & S instrument motors with ratings up to 1/100 HP. Available as servo, polarized synchronous, synchronous, torque, induction, and DC motors. Only 2 9/16″ square.



Holtzer Cabot Model L & S instrument gear motors with ratings through 150 oz. in. Available with gear reductions from 3:1 to 3600:1 in either spur or in helical gearing. Only 2 9/16″ square.



Size 34 (3⅜″ dia.) synchronous and nonsynchronous gear motors. Speeds from 2 RPM to 150 RPM. Torque output up to 40 lb. in. For applications that require quiet operation and long life.



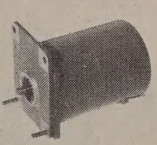
Holtzer Cabot right angle gear motors. Up to ⅛ HP in a variety of voltages, either AC or DC. Gear ratios from 6:1 to 1140:1 in either single or double reduction gear reducers.

SYNCHRONOUS AND INDUCTION MOTORS

Size 34 (3⅜″ dia.) and 44 (4⅜″ dia.) synchronous and induction motors. 1/300 through ½ HP. 600 to 12,000 RPM. Single or dual speeds, single or dual voltage. 50/60 or 400 Hz.

Size 39 (3⅞″ dia.) synchronous and induction motors. 1/200 through ½ HP. 600 to 3600 RPM. Single or dual speeds. 50/60 Hz.

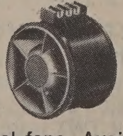
BRUSHLESS DC MOTORS



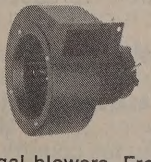
Size 15 brushless DC motors. Various voltage and torque ranges. Typical are 24 VDC, 0.6 oz. in. @ 3000 RPM and @ 45% efficiency.

FANS AND BLOWERS

Propeller and Tubeaxial fans. Up to 12″ dia. up to 1500 CFM. The EAD line of axial fans for cooling application is manufactured for continuous duty and efficient air circulation.



Vaneaxial fans. Available in 1½″, 2″, and 4¾″ dia. from 3 to 500 CFM at high static pressures. EAD V-Line fans are small and powerful air moving devices particularly suited to high-density electronic packages.



Centrifugal blowers. From 3 to 2000 CFM, static pressures up to 5″ of water. These centrifugal squirrel cage blowers have general-purpose performance characteristics for systems with medium back pressures.

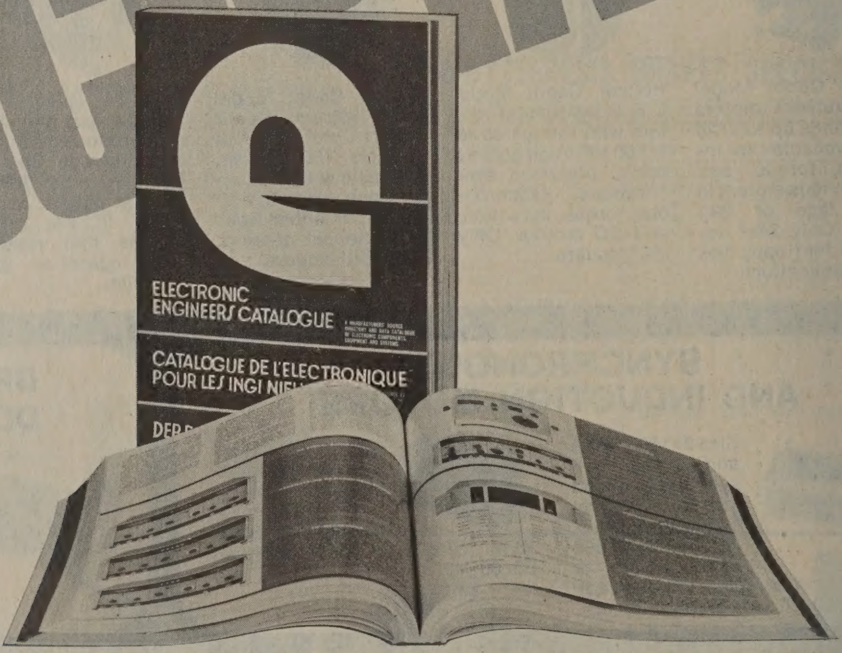
ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKALOG FÜR ELEKTRONIKER

The book is out...and the response is in...

IMMEDIATE AND OVERWHELMING

ACCEPTANCE



The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

United Technical Publications, Div. of Cox Broadcasting Corp., 645 Stewart Ave., Garden City, NY 11530 (516) 222-2500

We not only wrote the book,

DC MOTORS
SPEED CONTROLS
SERVO SYSTEMS
ELECTRO-CRAFT CORP
EXPANDED THIRD EDITION
SPEED CONTROLS
DC MOTORS
MOTOMATIC
DESIRED FUNCTION
AMPLIFIER
MOTOR
LOAD
FEEDBACK SENSING DEVICE
SERVO SYSTEMS

we make the products, too.

The "bible" of the industry. Over 35,000 now out in use. In its third edition. And Electro-Craft wrote the book.

That's expertise. And our products reflect it. Over 100 different products. And 300 different applications that we know of for sure. We stake our reputation on every product. A reputation earned by 16 years of innovation, reliability and integrity. That's a lot of years of experience in a young dynamic industry like ours.

You can put this expertise to work for you. In custom designs or off-the-shelf standards. One unit or thousands. You get our service both ways. Just give us a call at (612) 935-8226.

If by chance you don't have the Electro-Craft Handbook shown here, a $10.00 value, just send us your business card and $1.00 to cover handling and postage. (Overseas $5.00)

CHARACTERISTICS

RPM: Rigid one piece housing eliminates bearing alignment problems.

RINGS: Coin Silver 5 amp rings.
Copper 50 amp rings.

BRUSHES: Silver Graphite
Fabricast Grade FAG 180 (80% AG — 20% C)
Two brushes per ring.
Brushes individually removable and replaceable.

NOISE: 10 Milliohms dynamic resistance max
5 Milliohms max with 4 brushes per ckt.

CURRENT: Noted in tabulated block.
Rating may be doubled with 4 brushes per ckt.

HI-POT: 1200 VAC 60 cycle for 15 seconds.

ROTOR: One piece steel sleeve.
Ring complement vacuum cast on sleeve as unit with epoxy dielectric.

ROTOR LEADS: 5 amp Leads — 20 ga per MIL-W-16878 type "E"
50 amp Leads — 8 ga per MIL-W-16878 type "B"

HOUSING: One piece steel tubing construction.

COVER: Easily removable for brush and ring inspection.

BEARINGS: Shielded or sealed ball bearings.

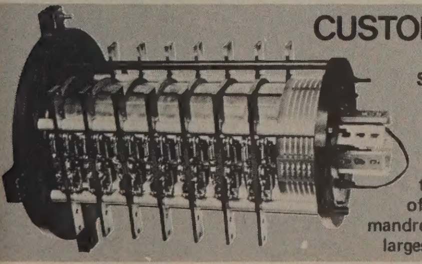
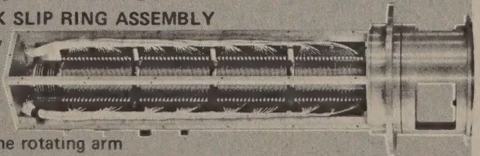
CUSTOM DESIGNED SLIP RING ASSEMBLIES



CUSTOM 7000 AMP SLIP RING ASSEMBLY

This slip ring assembly, as designed and manufactured by Fabricast, Inc., is used to supply 7000 amperes of current to the rotating mandrel of the world's second largest spin forging machine.

CUSTOM 222 TRACK SLIP RING ASSEMBLY



This slip ring assembly as designed and manufactured by Fabricast, Inc. was used to complete the electrical circuits to the rotating arm of an astronaut carrying centrifuge.

The unit consists of 50 amp. power, 5 amp. instrumentation and 50 megacycle coaxial modules.

BRUSH MATERIAL

- Fabricast grade Fag 180, the universal low noise level grade used for all standard brush assembles.
- Fabricast grade FAG 193, the lowest noise level grade, however, the ring surface speed is limited to 250 SFM.
- Fabricast grade FAG 150, the highest surface speed grade, however, noise levels are compromised.

Grade No.	Composition	Recommended Surface Speed	Carrying Capacity
FAG150	50% silver, 50% graphite	Over 3500 ft. per min.	100 Amps per sq. in.
FAG180	80% silver, 20% graphite	Up to 3500 ft. per min.	250 Amps per sq. in.
FAG193	93% silver, 7% graphite	Up to 250 ft. per min.	300 Amps per sq. in.

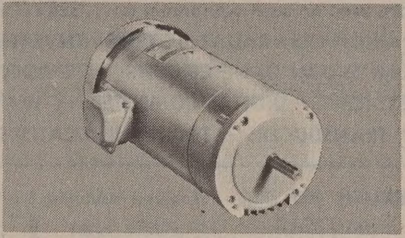
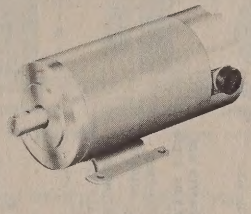
AC and DC MOTORS

DC Motors



For general duty on variable- or constant-speed applications where the power supply is d-c or where a-c/d-c conversion is used for controlled speeds. Also ideal for reversing applications. Type BC direct-current motors will start, accelerate, and run fractional-horsepower devices smoothly and easily. They are available in open, totally enclosed, explosion-proof, and severe-duty enclosures with solid base, round frame, or end mounting in most ratings. Special-purpose type motors are also available for full- and half-wave rectified power drives. For complete information, write for Bulletins GEA-9956 and GEA-9965.

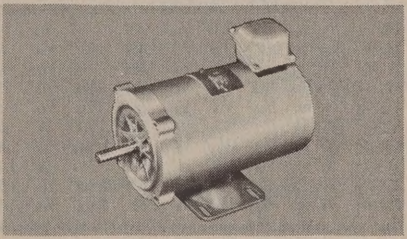
Reel-Drive Motors



GE's 6 5/16 inch diameter fhp direct-current motors are widely used for reel drives. Special end mountings and shaft extensions meet exacting application requirements. Series, split-series, compound, shunt, and compensated-shunt winding designs offer a broad design choice. Stall torque ratings from 3 to 120 ounce-feet and higher span various application needs, and motor voltage requirements are normally matched to your system design. Write for Bulletins GEA-9956 and GEA-9965.

New Permanent Magnet Motors

GE's BPA-34 permanent-magnet motors are smaller and lighter than comparable wound-field motors of the same rating. Permanent magnets replace field windings, eliminating the need for field power supply and the chance of field-winding failure or burnout; and with battery power efficiency is increased, battery drain decreased. Two leads from power supply reduce connect and disconnect time. The motor features double shielded ball bearings.

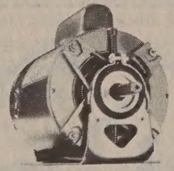


In 3.4 inch-diameter totally enclosed frame, the BPA-34 is available in face, flange, or welded-base design for conventional d-c voltages, producing a d-c rating of about ⅓ hp at 3450 rpm, ⅕ hp at 1725 rpm, and 1/7 hp at 1140 rpm on a continuous basis.

New NEMA 56 frame 5⅝ inch diameter, permanent magnet motors at 1725 rpm, ⅙ thru 1 hp, are available in C-face and bolt-on base for rectified and d-c power supplies for conventional d-c voltages.

These motors are ideally suited for such applications as copy machines, tape reel drives, printers, and filing equipment, and for any other equipment, including heavier drive applications, utilizing variable-speed drives or battery power. Write for Bulletin GEA-10087.

NEMA 48- and 56-Frame Ac Induction Motors



Dependable Form G Motors in Thousands of Variations

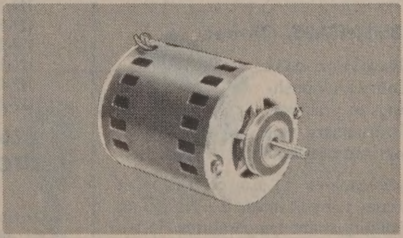
Form G a-c induction motors are available in most any electrical type, enclosure, and mounting in a variety of ratings from 1/20 to 5 hp for a complete range of commercial/industrial applications. For complete information write for Bulletins GEC-5000 and GEA-9964. New Form G5 motors (shown) also available in ⅛ through ¾ hp open split-phase and capacitor-start designs. Write for Bulletin GEA-10117.

Small Induction and Synchronous Motors

Versatility is synonymous with General Electric Small Induction and Synchronous motors. With this complete line, GE offers the design engineer the widest possible application freedom, plus the traditional fine quality of General Electric motors.

These small diameter motors are designed to provide dependable power for a wide variety of applications, including data communication printers, cash registers, telecopiers, typewriters, audio recording equipment, air compressors, projectors, computer card readers, disc file drives, as well as various machine tool applications. And many other jobs as well.

Such versatility is made possible by the choice of mounting styles, electrical types, bearing and insulation systems available.



M-49 FRAME MOTOR

The 3½ inch diameter M-49 motor is specifically built for applications requiring AC power in a limited space. This reversible motor can be mounted at any angle because it is available with either steel-backed babbit sleeve or ball bearings. The M-49 is offered in reluctance synchronous, permanent split-capacitor, split-phase and capacitor-start models. Shaft diameter is 5/16 or ⅜ inches.

19-FRAME MOTOR

The 3⅞ inch diameter 19-frame motor is designed to meet most small induction motor needs. Available with bolted cast-aluminum endshields, the 19-frame comes in synchronous, polyphase, permanent split-capacitor, split-phase and capacitor-start electrical types. This motor also features all-angle mounting, with the choice of either steel-backed babbit sleeve or ball bearings. On open models, a standard NEMA 42-frame mount is offered. Standard shaft diameters are 5/16 or ⅜ inches.

GRAPHALLOY

SILVER GRAPHALLOY BRUSHES and BRUSH & SLIP-RING ASSEMBLIES . . .

GRAPHALLOY BRUSHES

***are used on such equipment as . . .* SERVO SYSTEMS • SYNCHROS • CHOPPERS • RADAR • GYROS • INVERTERS • THERMOCOUPLE and STRAIN GAGE CIRCUITS • GUIDED MISSILES • PULSE SYSTEMS • DIGITAL COMPUTERS • WAVE GUIDES • SONAR • TRANSDUCERS • TORQUE INDICATORS**

Silver GRAPHALLOY Brushes have been widely used because *of* LOW *and* CONSTANT CONTACT DROP, EXTREMELY LOW ELECTRICAL NOISE *and* LONG LIFE. Over 200 grades are now serving in a wide variety of applications. Silver GRAPHALLOY Brushes on 1/2"-diameter coin silver slip rings have operated successfully in highly critical electrical circuits at speeds up to 100,000 R.P.M. *Our Engineering Department will assist in determining the exact grade of* GRAPHALLOY *for your needs.* Ask for our Brush Inquiry Form 109.

135-10
218-21
135-6

CONTACTS

GRAPHALLOY, because of its inherent non-welding and arc-quenching characteristics, is used widely for contacts. Ask for Data Sheet 950.

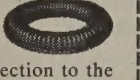
BUSHINGS, Oil-free

Replace oil-lubricated bushings in synchros, instruments, timers and missiles.

Advantages: 1) Lower friction at room temperatures. 2) No oil to solidify at low temperatures. 3) No oil to carbonize at prolonged elevated temperatures.

*Ask for Data Sheets 270 and 277 on Miniature Bronze-*GRAPHALLOY *Bushings.*

CONNECTORS (garter springs)



These silver-plated coil spring Connectors make for positive electrical connection to the brass body of the brush holder by snapping into the groove on the holder. The connecting lead can be pre-soldered to the Connector.

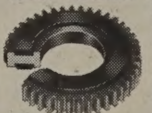
CLUTCH FACINGS and CLUTCH GEAR ASSEMBLIES



Torque remains same within close operating limits despite changes in temperature and humidity. For instrumentation, guided missiles, constant friction devices.

SLIP RINGS Solid Coin Silver

Standard Coin Silver Slip Rings, both *cylindrical* and *flat* types, are illustrated at right. We recommend the cylindrical type rings with three brushes per ring . . . spaced at 120°. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type or slip-ring assemblies can be furnished with leads attached.

No. 168 Series flat type to 20" O.D.

Standard "Flat" rings have 1/4" radial contact surface and 1/8" radial spacing between adjacent rings.

No. 116 Series cylindrical type to 36" O.D.

Copper Slip Rings, flat or cylindrical, are available.

BRONZE and COPPER Slip Rings, cylindrical or flat, are available in the above sizes.

Cylindrical coin-silver rings, stacked with insulating rings between them, are press-fitted over insulation on the shaft. The insulation should be kept concentric on the shaft to avoid losing the high degree of concentricity already built into the slip rings and to maintain the effectiveness of the highly finished ring surface.

Model 409 Flat Slip-Ring Assembly

Where cylindrical-type slip rings cannot be used because of axial space limitations, standard flat (or disc type) coin-silver slip rings will solve the problem. A series of these rings has been designed so that the rings will nest with a standard 1/8"-spacing between successive rings. Each ring provides a radial contact surface of 1/4" width. Our 3/16"-square brush in Brush Holder 11570 should be used with these rings. We strongly recommend three brushes per ring to reduce noise level to a minimum.

BINDING POSTS

Binding Posts (normally spring-type 19185 or 22978) insure simple, low resistance, positive electrical connections between brush shunts (which have been threaded through brush-holder caps) and the external circuits. Binding posts are used also with brush and slip-ring assemblies and with brush-holder assemblies to make connection between the assembly and the external circuit.

Miniature (Spring-type) Miniature binding posts are valuable where space is at a premium, particularly for some rotary strain-gage and rotary thermocouple applications. These miniature binding posts are not insulated.

"M" SERIES MOTORS AND INTERCHANGEABLE GEARHEADS

IMMEDIATE DELIVERY FROM STOCK

- **3 Frame Sizes — Rated 1/750 to 1/18 hp**
- **Torque Ratings from 0.7 to 1500 oz.-in.**
- **More than 600 Models Available from Stock**
- **Built by JAPAN SERVO COMPANY, Subsidiary of Hitachi, Ltd., Japan's Leading Maker of Precision Motors**

"M" Series motors are precision machined to highest quality standards; utilize permanently lubricated, electronically selected ball bearings. Rabbeted joints and brushed lead-wire openings form a totally enclosed, protected motor housing. All insulation materials are rated Class A or better. Modular concept, using interchangeable gearheads with pinion shaft motors, reduces costly tooling changes and permits a greater number of different models to be manufactured using common parts. Motors and gearheads never need re-oiling, insuring long service without maintenance. Designed for smooth, silent power; geartrains use high precision, accurately hobbed gears housed in a rigid diecast enclosure which combines great structural strength with efficient heat dissipation. Each motor is individually tested and run for six hours.

- **Instantly Reversible**
- **Totally Enclosed**
- **Permanently Lubricated**
- **Ball Bearing Construction**

DIRECT DRIVE MOTORS
INTERCHANGEABLE GEARHEAD MOTORS

INDUCTION MOTORS

Most popular type, with low starting current. May be started, stopped and reversed continuously with low-inertia loads. May be stalled at full voltage for short periods without damage. Continuous duty rated. Smooth, quiet and relatively efficient. Speed changes slightly with change in torque load.

1/250 hp MOTORS

Model Number	Speed, rpm	Torque, Oz.-In.	Frame Dimensions, Reference	Net Each

INDUCTION MOTORS WITH BUILT-IN BRAKING

Induction motor with built-in braking device has same advantages as Type IM, but will stop and reverse direction more rapidly without "coasting." Intended for duty cycles of 30 minutes or less requiring precise positioning or rapid direction reversal with holding brake action.

VARIABLE SPEED AC MOTORS

Variable speed AC motors feature 15:1 speed ratio with constant torque, tachometer-generator, feed-back regulated solid state control unit, instantly reversible, extremely smooth and quiet operation. AC design eliminates brush replacement and increases life expectancy more than tenfold.

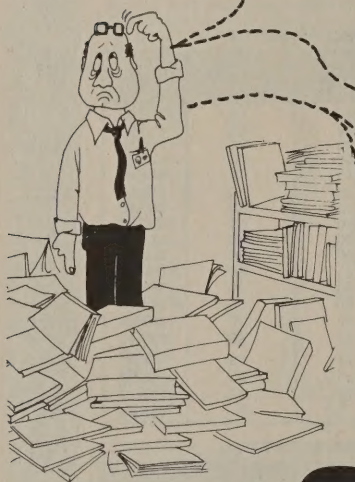
What can I use to keep all the manufacturers' product data I receive in order?

What system makes filing or retrieving manufacturers' catalogs fast and easy?

Which file system have thousands of engineers purchased because they know it works?



eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

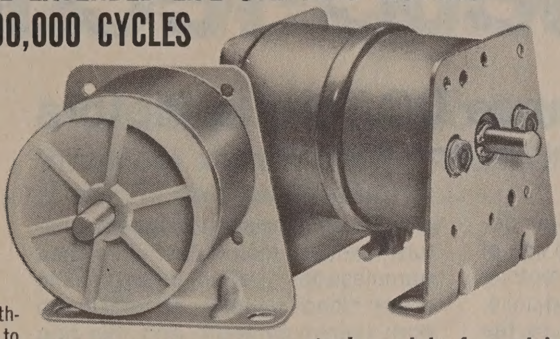
United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

LEDEX

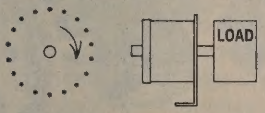
SERIES 50-L EXTENDED LIFE STEPPING MOTORS NOW 10,000,000 CYCLES



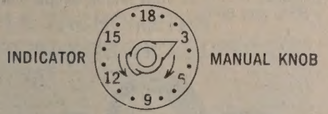
TORQUES TO 246 OUNCE INCHES

New internal design extends life 3 times without changing external dimensions. Accurate to ±1°, non-accumulative. Series 50-L stepping motors are engineered expressly for simplicity of construction and economy. All parts are permanently lubricated and enclosed for maintenance free operation. Their high torque to size ratio is a major benefit.

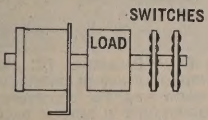
With a **unidirectional** Series 50 you can . . .



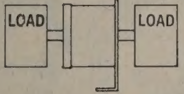
drive your load remotely through a series of short steps and stop at any one of 12, 18, 24, or 36 positions.



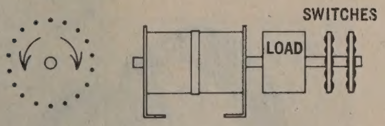
or add a knob for manual reset in either direction . . .



or add rotary switches for a combination power positioning drive and a step or program switch



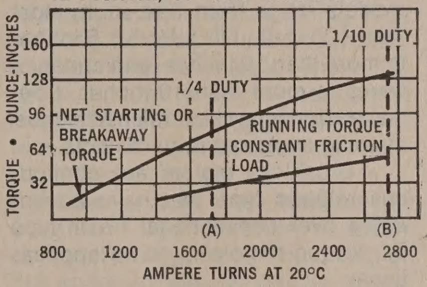
or use shaft extensions on each end to direct-couple two loads and drive them in the same direction at the same time.



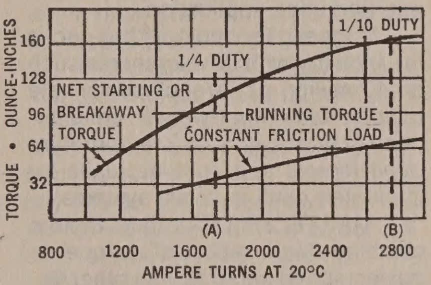
With a **bidirectional** Series 50 you can do all this . . . plus **remotely position** loads CW or CCW.

stock models for quick prototype starts

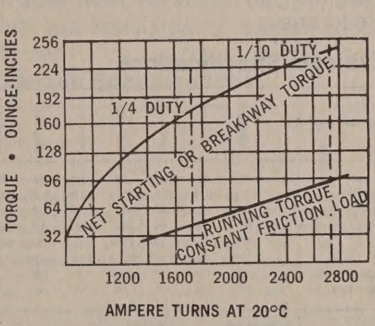
12 POSITION, 30° STEP INCREMENTS



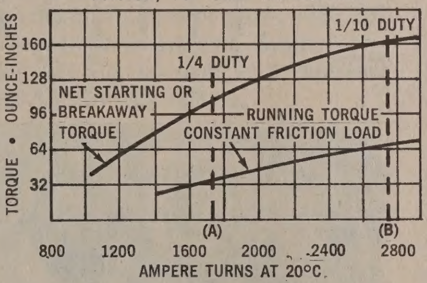
18 POSITION, 20° STEP INCREMENTS



36 POSITION, 10° STEP INCREMENTS



24 POSITION, 15° STEP INCREMENTS



Top curve in each graph shows net starting or breakaway torque, typical when friction component of load is high in beginning — as in driving a valve. **Lower** curve applies when friction load is consistent throughout stroke. Dotted lines "A" show output at 1/4 duty, 84 watts; dotted lines "B" 1/10 duty at 210 watts.

Highlights	Unidirectional	Bidirectional
Voltage	6 to 220 VDC	6 to 220 VDC
Length	1.9″	2.5″
Width	$2\frac{1}{16}$″ (Dia.)	2.5″
Height	$2\frac{1}{8}$″ (Sq. plate)	$2\frac{13}{32}$
Weight	14 oz.	24 oz.
Price, 1-9	$30	$48
Price, 1000 up	$15	$25

All working parts are completely enclosed. Minimum life is 10 million steps. For bidirectional, 10 million in each direction. And, the Series 50-L works on simple square wave input pulses . . . so you don't need expensive logic circuitry. Ledex Series 50-L stepping motors are engineered for high torque-to-size, uniform stepping accuracy, construction simplicity and economy.

Newly developed tooth clutch drive gives positive grip stepping action (no slip) and doubles as a built-in electromechanical clutch brake to eliminate the natural tendency of overdriving at the end of a step.

Catalog D-7002 lists complete details on stock models, performance data and engineering considerations.

Magnetic Technology®

High Performance DC Torque Motors

Brush type and Brushless, More than 500 standard models

Magnetic Technology® offers designers the broadest standard line of high performance DC torque motors, as well as exotic one-of-a-kind units. These motors are produced to the most exacting reliability and performance standards, and have been proven in aerospace, ground-based and undersea applications.

Magnetic Technology® has paced the industry with developments such as 40 million oz-in/sec² power rate motors, ultra light-weight units for deep space use, 500°F temperature rated motors and compact units for implanted cardiac assist systems.

MAGTECH® DC torque motors combine high ratios of torque to power, speed and size with other desirable characteristics such as low electrical time constant and low ripple torque.

Example Specifications

Mag. Tech. Part No.	1500G-050	1937G-050	2340-077	2813-100	3680-185	6960-195	14000E-300

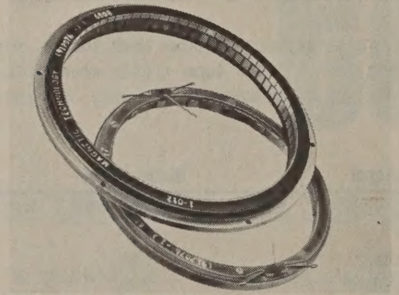
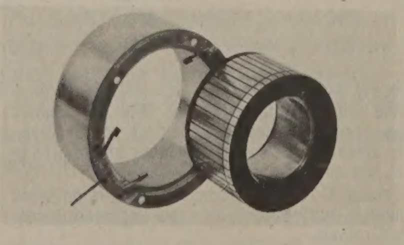
Weight (oz.)	2.5	4.2	7.6	18	49	145	850



Typical high performance units



These permanent magnet, armature excited motors are furnished frameless for direct mounting to the driven load without gears. Large bore, minimum width and thin-ring configurations make possible compact system packaging.

Peak torque ratings of standard models range from 7 oz-in. to more than 120 lb-ft., OD's from 1.5 inches to more than 19 inches, and armature bores to more than 10 inches. Special designs may be furnished to meet specific customer requirements.

Brushless motors are continuous rotation type that have advantages over conventional brush-type DC torque motors in some applications.

Example Brushless Specifications

Mag Tech Part No.	1600B-035	2375D-050	3625B-050	3350B-125	11500-082	19300-150

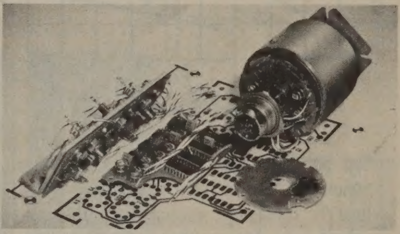
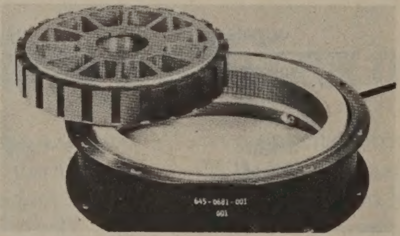
O.D.	1.6	2.375	3.625	3.35	11.478	19.30
I.D.	.810	1.250	2.50	1.83	9.75	14.623



Brushless motor and electronics

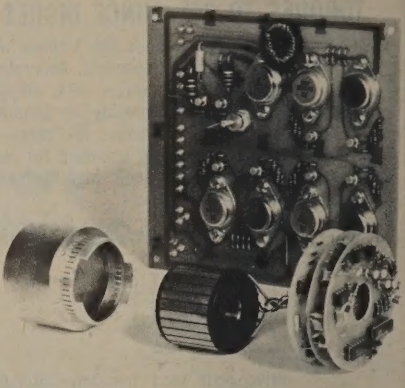


Magnetic Technology,® a division of Vernitron Corporation, 21001 Kittridge Street, Canoga Park, California 91303. TWX 910-494-1217. Telephone (213) 887-7700.

Magnetic Technology®

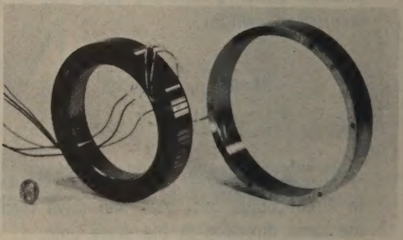
Special Products

Magnetic Technology® also produces linear actuators, and a wide variety of custom devices including the examples below.

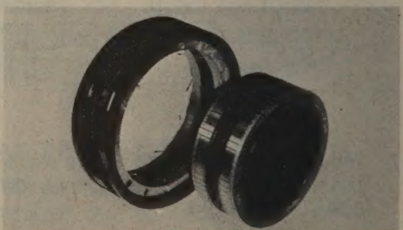


High Efficiency Brushless Motor System. The model 2250-150 operates at 1100 rpm with a 20 oz-in load. The overall system efficiency is above 70% for all input voltages between 18 and 32 volts and at temperatures between −55°C and 85°C.

Rare Earth Brushless DC motor. Special motor developed for use as cardiac assist incorporating rare earth magnets to prevent alteration of motor characteristics in case of over current. Motor designed for maximum efficiency, i.e. lowest temperature rise under continuous load conditions.



Limited Angle Brushless DC Torquers



Precision Motor Tachometer

Magnetic Technology®

Tachometers

Any of the more than 500 standard MAGTECH® torque motors may be operated as a tachometer generator. In addition, separate product lines of precision tachometers and industrial tachometers are available. These range from .05% ripple voltage units usable at rates less than one revolution per day and units with a 50,000:1 dynamic range, to popular industrial units.

These tachometers feature open, frameless configuration for direct drive mounting. The direct mounting without gears eliminates dead zones and inaccuracies that can result from gearing backlash and gear imperfections. Typical characteristics include high voltage gradient, low time constant, high coupling stiffness and resolution, and accuracy at low speeds.

EXAMPLE TACHOMETER SPECIFICATIONS INCLUDING INDUSTRIAL TYPES*

Mag. Tech. Part No.	1917-067	2000-100*	3069C-175*	3375C-070	7200-160	15000-248

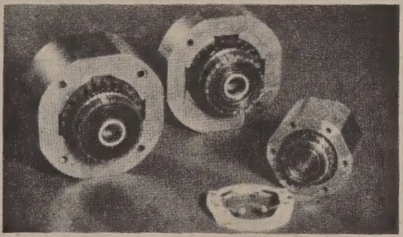
Industrial DC Servo Motors

Brushless and Brush-type, Frameless or Housed, Motor-Tach Combinations

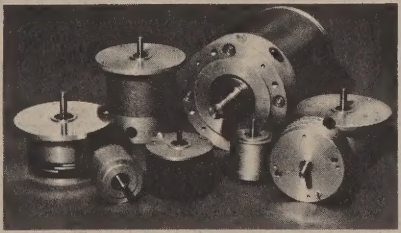
Only subtle design, performance and materials variations distinguish these quality, direct drive motors from Magnetic Technology's® established military grade motors. Yet, through volume production they are priced for industrial applications.

Features include fast response, high torque, precise positioning, high tracking accuracy, quiet operation, and relatively low ripple. These DC servo motors utilize a permanent magnetic field for higher efficiency plus a moving iron armature for maximum thermal inertia.

The motors are available in frameless configuration to allow compact packaging and mounting of the armature directly on the driven load. Housed units, with shaft and bearings also are available. Direct coupling to the driven load eliminates the disadvantages of gears and couplings in servo systems. System simplification is possible and excellent system stability results.



Carriage drive motors for printers.



Send for your free copy of our new 162 page product and application guide. Magnetic Technology,® a division of Vernitron Corporation, 21001 Kittridge Street, Canoga Park, California 91303. TWX 910-494-1217. Telephone (213) 887-7700.

Applications for these units include disc memory systems, card sorters, tape transports and printers, N.C. machine table drives and feedback tachometers.

Continuous rotation brushless units, for constant or variable speed operation, also are available. Electronic drive and control systems can be supplied with these units.

In addition to MAGTECH® industrial servo motors and tachometers, motor-tach combinations can be supplied. A number of standard combinations are available, but virtually any motor and tachometer can be combined to meet drive and tachometer sensitivity requirements. The combination unit is smaller, lighter, easier to mount and generally lower in cost than separate units. These units aid reduction of system resonances.

Example Specifications

Mag Tech Part No.	1310-150	1937D-150	3069-175	3069-237	H5500-550	6002-325

* 1 Replace the digit after the "slash" with one of the following letters.
A = Pinion gear on shaft for gearboxes type 06/1, 05/1, 05/2, 05/3, 05/40.
B = Straight shaft — see motor drawings.
C = Special shafts.
D = Pinion gear on shaft for 03/2 gearbox.
Example — Model 1212 A 001 = motor with pinion gear for 06/1 gearhead.

*2; *3; *4; *6; At voltage specified in column 5.
*18 Rotor to case thermal resistance computed with rotor at zero velocity.
*19 Radial shaft load rating at 3000 RPM.
*23 Weights in parenthesis are for motor with gearbox (same case).

24: The following symbols indicate the gearbox types suitable for the motor.
0 = Screw-On gearboxes, ratios from 6:1 to 1,000,000:1.
† = Slip-On gearboxes of type 05/1 (plastic case .668 in. in diameter) ratios from 3.45:1 to 5760:1.
‡ = Slip-On gearboxes of type 05/2 and 05/3 (metal case .628 in. in diameter) ratios from 3.45:1 to 235,000:1.
x = Slip-On gearbox of type 05/4 available. Same ratio as 05/3.
~ = Also with Built-in gearboxes, ratios 4:1, 15:1, 59:1.
★ = Also with Built-in gearboxes, ratios 4:1, 15:1, 59:1.
□ = Slip-On gearboxes of type 03/2 (metal case 23.8mm (.941 in. in diameter) ratios from 3:1 to 983,447:1 peak torque up to 4000 grcm (55.5 oz-in.)

25. Direction of rotation seen from shaft end, red lead +R = clockwise; L = counterclockwise.

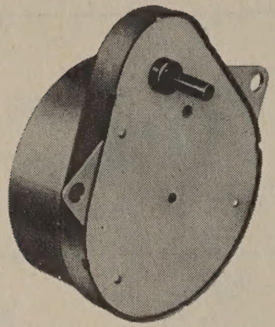
Micro Mo Electronics' broad experience and technical expertise in development and design of high performance precision motors, tachometers, motor tachometers and gearheads has been utilized to develop the products shown. Our appreciation of the customer's system performance requirements, servo stability problems, thermal constraints, mechanical interfaces, and cost factors allows Micro Mo Electronics to offer unique solutions to your problems.

Try Us!

AC & DC MOTORS

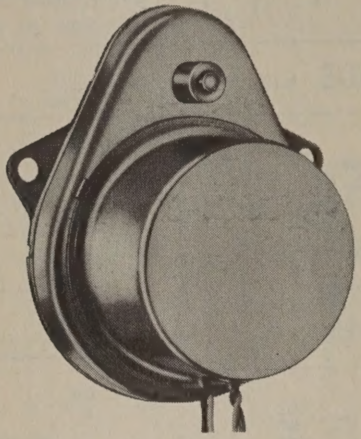


Shaded Pole Synchronous Motors

Military or industrial. Available for 50 or 60 Hz operation. Five standard voltage ratings; 150 output speeds, clockwise or counterclockwise. Rotor speed 300 rpm at 60 Hz. Running torque 30 oz-in at 1 rpm.

22100 Series	Military Motor Unidirectional
42100 Series	Industrial Motor Unidirectional U/L recognized

Ask for Reference Sheet CM801

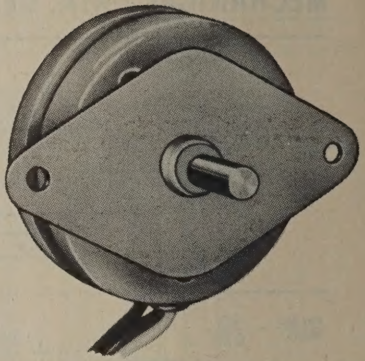


Reversible Synchronous Motors

For commercial/industrial use. 50 or 60 Hz operation; voltages from 12 to 230. PM rotor, 2-coil windings. Electrically reversible. Rotor speeds 300 rpm at 60 Hz or 720 rpm at 60 Hz. Torque 0.75 oz-in and 1.1 oz-in respectively. Output speeds from 300 rpm to 1/1000 rpm.

81300 Series	300 rpm rotor
S7100 Series	720 rpm rotor

Ask for Reference Sheets CM803 and S7100

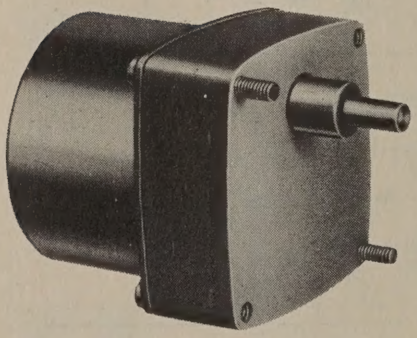


Lightweight Reversible Synchronous Motors

High torque-to-frame size ratio. Produces 6.0 oz-in torque at 300 rpm or 4.0 oz-in at 600 rpm rotor speed. Electrically reversible. Fast start/stop characteristics. Low cost. Permanently lubricated bearing prolongs life, minimizes maintenance.

81700 Series	300 rpm U/L recognized
81800 Series	600 rpm

Ask for Reference Sheet CM821

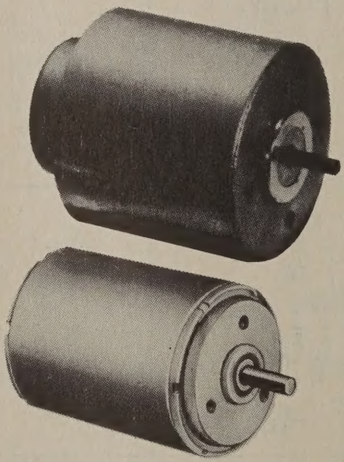


Single and Dual Speed Instrument Drive Motors

Single speed reversible and dual speed unidirectional motors. Two rotor speeds 300 or 600 rpm. 24, 120 or 240 V ac, 60 Hz or 50 Hz. NEMA 2-11 gear box or square gear box available. U/L recognized.

86100 Series	Single speed reversible (300 rpm)
86600 Series	Single speed reversible (600 rpm)
86500 Series	Dual speed unidirectional (300 rpm)
86700 Series	Dual speed unidirectional (600 rpm)
A86100 Series	Dual speed unidirectional (300 rpm)
86800 Series	Dual speed unidirectional (600 rpm)

Ask for Reference Sheet CM860

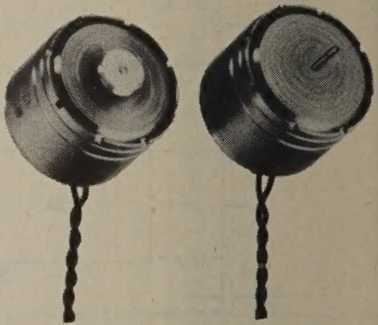


Ironless Rotor DC Motors

Standard and miniature sizes. Low inertia, rapid response. Reversible. 12V dc and 24V dc models available. Time constants 17 ms or 23 ms. Available with integral tachometer for use in closed loop system.

9904-120-10803 Series	Motor Only
9904-120-10804 Series	With Tachometer
12601 Series (Miniature)	Single Shaft Motor Only
12602 Series (Miniature)	Double Shaft Motor
12603 Series (Miniature)	With Tachometer

Ask for Reference Sheet CM815 & CM817



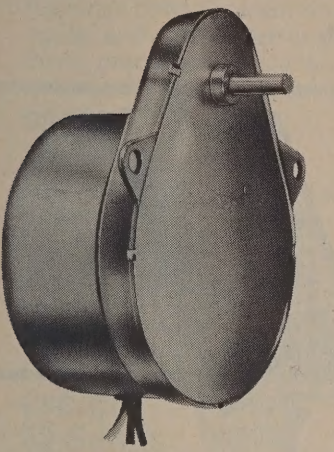
Coin Size Ironless DC Moto

This motor has approximately the same diameter as a penny. Can be furnished with or without a pulley. 9V dc. Rotor speed 5320 ± 950 rpm nominal. Torque 3 gcm (.04 oz-in) Motor constant 50 mA-typical. Applications include portable dictating equipment, mini digital cassette or cartridge drives and paper drives for printers.

4322 010 59200	With 8.1 mm dia. pulley
4322 010 77000	With 6 mm shaft

Ask for Reference Sheet CM816

STEPPER MOTORS

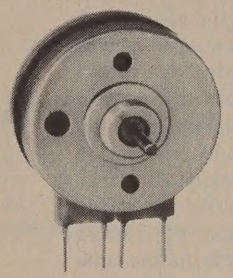


Pulse Stepper Motors

Industrial, unidirectional or bidirectional. Step rate 0-80 steps/sec. Rotor torque 0.2 oz-in. Double-torque-version also available in unidirectional model. SPDT switching of input provides stepping pulses (no logic required). Rotor steps 15° with each pulse applied; can be supplied with gearing to increase torque or reduce step angle. Standard voltages are 6, 12 or 27V dc; other windings are available.

45100 Series	Industrial, Unidirectional
44100 Series	Industrial, Bidirectional
44600 Series	Industrial, Unidirectional, Double Torque

Ask for Reference Sheets CM802, PI-107, PI-122

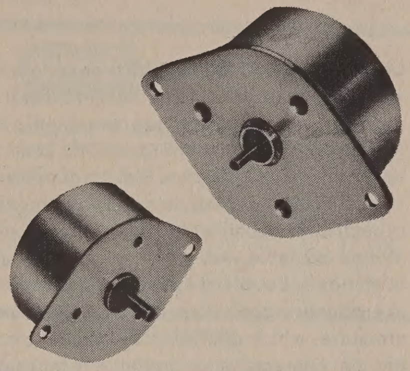


Micro Miniature Logic Stepper Motor

Extremely small—1" diameter (approximately the same diameter as a 25¢ piece). Operating voltage 12V dc-15° step angle. Can be driven up to 500 PPS with torque up to 0.2 oz-in. Ideal for battery driven applications—automotive digital clocks, portable digital cassettes or cartridge drives and similar instruments where space and weight are at a premium.

82100 Series Logic Stepper Motor

Ask for Reference Sheet CM818

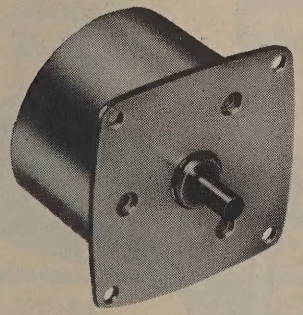


Low-Cost Light Duty 4-phase Stepper Motors

7° 30′ step angle. Bidirectional. 5 or 12V dc models available. Excellent pull-in rates and good stepping accuracy. 82200 Series furnishes .750 oz-in pull-in/out torque and a pull-in rate to 440 steps/sec. 82400 Series furnishes 2.4 oz-in pull-in/out torque and a pull-in rate to 350 steps/sec. Gear box can be furnished to reduce step angle and increase torque on either series.

82200 Series	7° 30′ Step angle
82400 Series	7° 30′ Step angle

Ask for Reference Sheet CM814

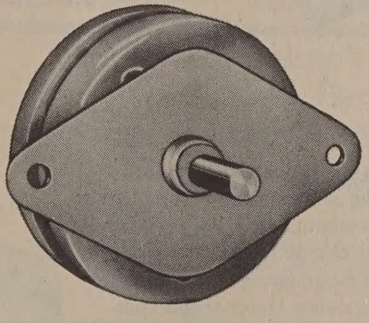


Low-Cost Medium Duty 4-phase Stepper Motor

Available in either 5V dc or 12V dc models. 82600 Series offers 6.50 oz-in max. pull-in/out torque and 210 steps/sec. max. pull-in rate with 15° step angle .82800 Series offers 7.50 oz-in max. pull-in/out torque and 235 steps/sec. max. pull-in rate with 7° 30′ step angle. Can be fitted with gear box if desired.

82600 Series	15° Step Angle
82800 Series	7° 30′ Step Angle

Ask for Reference Sheet CM814

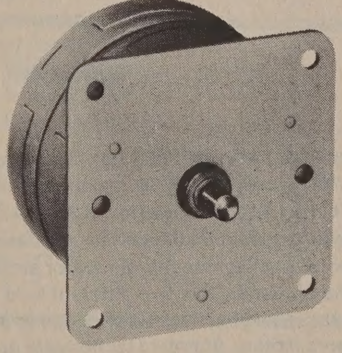


Industrial-Type Stepper Motor

4-phase stator and permanent magnet rotor. Pull-in/out torque 7.5 oz-in—holding torque 13 oz-in. Pull-in/out rates to 120 steps/sec. Bidirectional. 5V or 12V dc. 7° 30′ step angle. Suitable for use in instrumentation and computer peripherals.

82700 Series 7° 30′ Step Angle

Ask for Reference Sheet CM819



Low-Cost, High Torque Stepper Motor

A bidirectional permanent magnet stepper motor. Standard construction provides 2 or 4 phase operation, a 7° 30′ or 15° step angle and roller or sleeve bearings. Max. pull-in/out torque 23 oz-in. Max. pull-in rate 500 steps/sec. Operating voltages from 5V dc to 33V dc. Highly effective with long life and efficient utilization of power.

82900 Series 7° 30′ Step Angle

Ask for Reference Sheet CM820

For cost effective solutions to your miniature D-C motor application problems...

Put over forty years of Pittman experience to work for you.

LO-COG® SERVO MOTORS: Three series of d-c motors having diameters of 1.8″, 1.58″ and 2.05″. Each is built in several lengths ranging upward from 2″ exclusive of bearing bosses and shaft extensions. Most models can be supplied for inputs from 6 to 48 VDC. Load speeds from under 1,000 rpm to approximately 10,000 rpm. Stall torques from under one oz.-in. to more than 100 oz.-in. Quality materials and construction, as well as automated testing of each motor, ensure high performance and durability at moderate cost. All motors available with your choice of self-aligning oil-impregnated bronze bushings or double-shielded ball bearings. Custom modifications possible in production quantities. These LO-COG motors are equipped with skewed armatures which offer very low magnetic cogging yet provide the desirable thermal characteristics and high torques of iron armature designs.

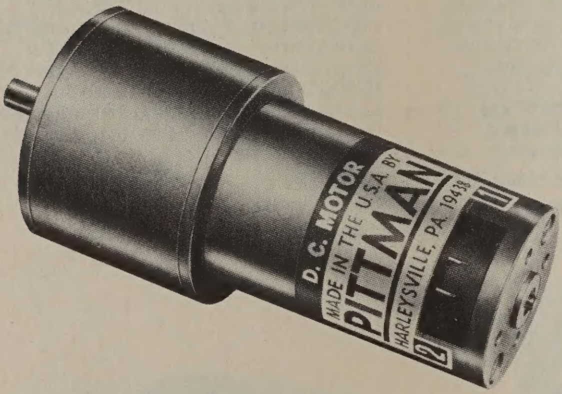
1



GEARMOTORS: PITMO® gearmotors are built in two series having gearbox diameters of 1.375″ and 2.00″ with overall lengths from 2.93″ to 3.69″, depending on choice of motor section, exclusive of bearing bosses and shaft extensions. Gears are sintered iron to precision tolerances. Selected armature windings and gear ratios provide output shaft speeds under load from approximately 2 rpm to 650 rpm, depending on application. Gear design strength limits are 160 oz.-in. and 300 oz.-in. respectively for the two series. Motor sections feature LO-COG construction as described above. Any of these gearmotors may be ordered with integral tachometer described below.

MOTOR-TACHOMETERS: PITMO® motor-tachs are offered in two series — 1.18″ diameter and 1.58″ diameter, both exclusive of terminals and terminal blocks. Lengths range from 3.31″ to 4.09″, not including bearing bosses and shaft extensions, depending on desired motor characteristics. Separate motor and tachometer-generator armatures are mounted on a single shaft and operate within two different field magnet systems. Motor section performances generally follow those of the PITTMAN 8310 and 9410 series of servo motors. Standard tachometer gradient is two volts per 1,000 rpm with typical ripple of 6% peak-to-peak with no filtering. A wide range of windings is available for both motors and tachs.

Typical applications include digital tape cassette and cartridge drives, chart and pen drives, and other velocity or position servo systems where accuracy of speed control or high damping is a requirement.

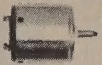
escap® DC MICROMOTORS

The Unique design and construction of escap® skew-wound ironless rotors provide low rotor inertia, rapid response (time constant down to less than 9 ms.), low starting voltage, high power to volume ratio, low torque ripple, and efficiencies of 80% and better. The escap® line reflects the highest level of engineering skills, Swiss precision manufacturing and the best performance-to-cost ratio available.

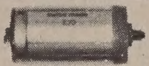
escap® 15 Series



High efficiency — long life — low inertia — in a case size of 15 mm.

Output power (watts)	—	0.24	to	0.4
Operating voltage	—	1.5	to	12
Stall torques (oz-in)	—	0.07	to	0.13
No-load speed (rpm)	—	15,000	to	20,600
Moment of rotor inertia (gcm²)	—	0.2	to	0.32
Torque constants (oz-in/A)	—	0.12	to	0.9

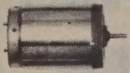
escap® 16 Series



High efficiency — long life — torque practically pulse-free — in a case size of 16 mm. (Available as a tachometer).

Output power (watts)	—	0.3	to	0.7
Operating voltage	—	4	to	12
Stall torques (oz-in)	—	0.14	to	0.41
No-load speed (rpm)	—	9,000	to	17,000
Moment of rotor inertia (gcm²)	—	0.32	to	0.7
Torque constants (oz-in/A)	—	0.31	to	1.3

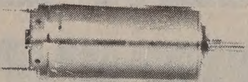
escap® 22 Series



High starting torque — fast acceleration — in a case size of 22 mm.

Output power (watts)	—	1.4	to	2.4
Operating voltage	—	3.5	to	36
Stall torques (oz-in)	—	1.0	to	1.7
No-load speed (rpm)	—	7,300	to	8,500
Moment of rotor inertia (gcm²)	—	1.5	to	3.5
Torque constants (oz-in/A)	—	0.6	to	6.0

escap® 23 D Series



Low inertia — mechanical time constant only 10 ms — in a case size of 23 mm.

Output power (watts)	—	3.4	to	3.8
Operating voltage	—	6	to	15
Stall torques (oz-in)	—	3.5	to	4.2
No-load speed (rpm)	—	4,900	to	5,250
Moment of rotor inertia (gcm²)	—	4.7	to	5.9
Torque constants (oz-in/A)	—	1.6	to	3.8

escap® 26 P Series

High efficiency — long life — low inertia — in a case size of 26 mm. (Available as a tachometer).

Output power (watts)	—	1.0	to	3.9
Operating voltage	—	3	to	24
Stall torques (oz-in)	—	0.72	to	4.0
No-load speed (rpm)	—	5,200	to	8,300
Moment of rotor inertia (gcm²)	—	3.8	to	8.5
Torque constants (oz-in/A)	—	0.5	to	4.6

escap® 28 D Series

Fastest response — mechanical time constant of only 9 ms — high efficiency.

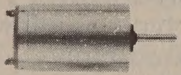
Output power (watts)	—	6.1	to	15
Operating voltage	—	6	to	24
Stall torques (oz-in)	—	10.4	to	15.6
No-load speed (rpm)	—	3,200	to	5,400
Moment of rotor inertia (gcm²)	—	16.9	to	19.2
Torque constants (oz-in/A)	—	2.5	to	6

escap® 28 PL Series

Good regulation — low inertia — high temperature rotor — in a case size of 28mm. (Available as motor-generator sets).

Output power (watts)	—	4.5	to	7.6
Operating voltage	—	9	to	36
Stall torques (oz-in)	—	5.0	to	7.9
No-load speed (rpm)	—	4,700	to	5.250
Moment of rotor inertia (gcm²)	—	10.0	to	17.5
Torque constants (oz-in/A)	—	2.6	to	9.9

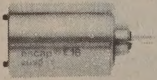
escap® 34 L Series



High efficiency — large power output — in a case size of 34 mm.

Output power (watts)	—	4.5	to	14.8
Operating voltage	—	4.5	to	36
Stall torques (oz-in)	—	4.6	to	16.0
No-load speed (rpm)	—	2,500	to	5,900
Moment of rotor inertia (gcm²)	—	16	to	32.2
Torque constants (oz-in/A)	—	2.4	to	8.1

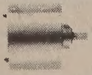
escap® Reduction Gearboxes



Interface with 15 & 16 Series.

Model	Running Torque	Ratios to:
E16	2.8 oz-in	2090
E26	8.0 oz-in	560

escap® Reduction Gearboxes



Interface with 22, 23, 26, 28 & 34 Series Motors.

Model	Running Torque	Ratios to:
B26/K26	13 oz-in/21 oz-in	2050
A42/P42	70 oz-in/70 lb-in	3840/2178

Note: All values nominal for operational at 25°C ambient temperature. Specifications subject to change without notice.

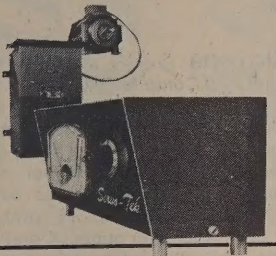
Proven Performance, Reliability and Ease of Maintenance for the Most Demanding Industrial Applications

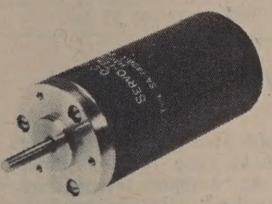


Solid-State "500" Series Precision Adjustable-Speed Drives*

All Motors Totally Enclosed, Fan-Cooled

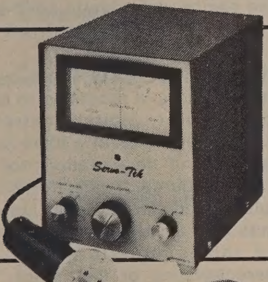
MAINTENANCE — Design eliminates vacuum tubes, selenium rectifiers and time delays. Utilizes silicon diodes, transistors and a magnetic amplifier for exceptionally long service life. Modular plug-in construction requires only a screwdriver for servicing.
REMOTE CONTROL — A 10-turn potentiometer provides precise adjustment and can be placed in any convenient location. Meter monitors operation and continuously indicates speed.
GEARED MOTORS — Motors are available with integral gear reducers.
BRAKE-REVERSING — Relay-controlled braking and reversing models available.
SPEED RANGE — Infinitely adjustable from less than 24 rpm to 3600 rpm (150:1) while delivering full-rated torque. Continuous duty rating at all speeds.
REGULATION — Temperature-compensated tachometer feed-back provides both line and load regulation of better than ⅓ of 1% of rated speed.

Models available from ⅛ to 1½ hp



D-C Permanent-Magnet Tachometer Generators *Temperature-Compensated*

Applications
SERVOS — The highly linear output and wide speed range are ideal for velocity or integrating servos. Low-driving torque permits its use as a damping or rate signal in all types of servos.
TEMPERATURE-COMPENSATED — The voltage output @ +25°C will not deviate from this amount by more than 1/100 of 1% per degree of change when operated at any temperature within the temperature range of −20°C to +75°C.
SIZE — Miniature. Approx. Dia. 1⅛".
OUTPUT — Various models with outputs as high as 45v/1000 rpm.
LINEARITY — On most models from 0 to 12,000 rpm is better than 1/10 of 1% of voltage output at 3600 rpm.
BRUSH LIFE — Better than 100,000 hours (10 years) of continuous operation at 3600 rpm.
BIDIRECTIONAL OPERATION — Output in either direction is held to ¼ of 1% tolerance.
RIPPLE — The rms value will not exceed 3% of the d-c value at any speed in excess of 40 rpm.
CONSTRUCTION — Aluminum housings with protective treatment; stainless steel shafts; fully shielded stainless steel ball bearings; Mylar insulation.
Consult our Engineering Department for information on our low ripple generators.

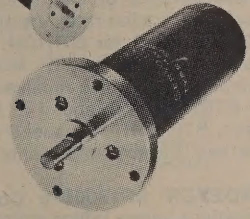


DC Servo Control

A device which is so versatile it can be programmed to operate as either a bi-directional speed regulator or positioning servo. A d-c permanent magnet servo motor and temperature compensated d-c generator (torque unit) designed for maximum reliability provide control to the driven load. An integrated operational amplifier with external gain adjustment coupled with a high efficiency booster provide high follow-up accuracy and excellent dynamic response under various load conditions. A highly regulated temperature compensated reference supply insures stable operation with variations in ambient temperature, line voltage and time.

Features

Adjustable, stepless bi-directional speed control — Dynamic speed range in excess of 2000:1 — High accuracy maintained with load, line voltage and temperature variation — Adjustable output torque control — Controlled deceleration capability — Remote programming capability — Easy conversion from one mode to the other.



D-C Permanent-Magnet Servo Motors

Model SU-680D-29 Delivers 13.3 Watts of Continuous Power Output at 9000 rpm

Applications
Chart Recorder Pen Drives, Null-seeking Devices, Capstan Drives for Tape Transports, Proportioning Applications; Prime Mover in Servo-Mechanisms.

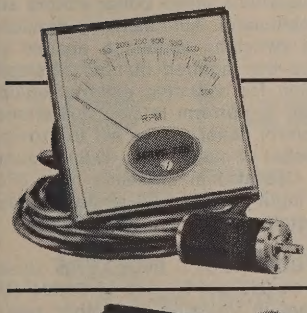
Specifications

DYNAMIC: Maximum No-Load Speed @ 23v D-C — 10,000 rpm; ±500 rpm; Full Load Torque @ 9,000 rpm — 2.0 oz-in (max.); Stall Torque @ 23v D-C (Theo.) — 20.0 oz-in (min.); Frictional Torque — 0.25 oz-in (max.); Acceleration at Stall (Torque/Inertia) — 46,800 RAD/SEC^2 (min.); Case Temperature Rise @ Full Load (Free Air Dissipation) −55°C (max.); Case Temperature Rise Per Watt of I^2R loss (Free Air Dissipation) −6°C.

STATIC: D-C Resistance — 3.24 Ohms (typ.); Inductance — 2.5 Millihenry (typ.); Rotor Inertia — 30.0 GM-CM^2 (typ.); Total Weight — 8.25 oz. (max.); Length — 3.25 in., excluding shaft; Maximum Ambient Temp. −40°C.

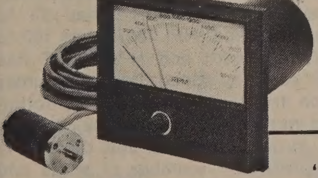
FUNCTIONAL CONSTANTS: Inertial Time Constant — 25.0 Milliseconds (max.); Electrical Time Constant — 0.77 Milliseconds (typ.); Torque Constant — 2.8 oz-in/Amp. (min.); Voltage Constant (back emf) — 2.07 x 10^{-3} volts/rpm (min.); Viscous Damping Factor — 1.79 x 10^{-3} oz-in/rpm (min.).

Other Models Available



Accurate Speed Indicating Systems

A truly versatile "package" provides accurate speed indication for almost anything that moves. Nearly every industrial process or machine can benefit by the economy and safety of continuous speed indication.
SELF POWERED — No batteries or external power required.
LOW VOLTAGE — Connecting cable can be as long as 500 ft.
PERMANENTLY LUBRICATED BALL BEARINGS.
EASILY READ 4½" INDICATOR.
TAUT BAND MOVEMENT — Withstands vibration and shock.
STANDARD RANGES — 0 to 100, 250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 10,000 and 12,000 rpm. These speeds can also be provided to read "Percent of Full Speed" or "Percent of Capacity."
0 to 10 rpm available at small additional cost.
Complete System includes Generator, Indicator (specify range), Mounting Base, Coupling and 15 ft. of Connecting Cable.



Control Meter Relay Systems

A speed monitoring system using an optically controlled meter relay and a d-c tachometer generator. Ideal for use in process and control applications requiring under and over speed limit control while continuously monitoring speed settings and changes. Also can be used to directly control power to motors, alarms, solenoids, etc. without the use of power controls. Both single and double set-point systems are available from 10 to 12,000 rpm full scale. System accuracy is 2% of full scale including indication and set-point accuracy. The set-point repeatability is 0.5% Input power requirement is 3 watts at 105 to 130 volts AC 60 Hz.

SLO-SYN® Synchronous/Stepping

M SERIES STEPPING MOTORS Shown in chart with M prefix. Represent the most advanced permanent magnet stepping motor design available and the most complete range in both torque ratings and size. Provide the highest torque per pound and torque to inertia ratios. Can be driven at rates above 20,000 steps per second with minimum of power input. Have Class B insulation and may be operated at ambients from −40°C to +65°C. Stepping increment is 1.8° using a 4-step input sequence; 8-step input sequence gives an 0.9° stepping increment. Step accuracy choice of either ±3% or ±5%. Chart shown gives off-the-shelf SLO-SYN drives for motors listed but custom drives can be designed by Superior Electric or built by the user if desired. For torque vs speed characteristics and complete ratings and specifications, request Superior Electric Catalog MSM1171.

PRECISION STEPPING MOTORS Shown in chart with HS prefix. Designed for phase-switched d-c stepping. Make 200 steps of 1.8° per shaft revolution. Each step is accurate within ±3% nonaccumulative. Can be used with SLO-SYN controls and drives or with user-designed and built drives. With proper circuitry, may be operated at speeds greater than 1000 steps per second without missing steps.

BIFILAR MOTORS Shown in chart with 4-number suffixes. Contain twice the windings of a 3-lead motor for better L/R time constant, better performance. Use simple drive circuitry or recommended SLO-SYN drives. Make 200 steps of 1.8° per shaft revolution except LS prefixed types which have a 0.72° step angle and TS prefixed types which have a 5° step angle. X prefixed are explosion proof. Step accuracy is ±5% nonaccumulative.

AC SYNCHRONOUS MOTORS

PERMANENT MAGNET A-C CONTROL MOTORS have no brushes, ratchets or detents feature extremely rapid starting, stopping and reversing characteristics. Need only a single-pole, 3-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating currents are nearly identical. Can be completely stalled or overdriven without overheating and without harmful effects on components. Start or stop in less than 5° of shaft rotation; no need for electrical or mechanical braking. Phase-shifting resistor and capacitor must be used when operating from a single-phase source. Speeds available are 28.8, 72 or 200 rpm at 60 hertz.

CONTROLS AND DRIVES

TRANSLATOR ST1800B For pulse-to-step conversion of data to bifilar motors. Converts low-level signal pulses or square waves into the correct switching sequence needed to drive a SLO-SYN motor at the desired stepping rate. Input is 105-125 volts a-c, 1.5 amps. Signal input impedance is 500 ohms. Input may be triggered by pulse or square wave or by an external switch. Operates in ambients from 0°C to +40°C. Ideal for a wide range of programmed positioning and indexing functions. Approx. shipping weight 12 lbs.

ADJUSTABLE SPEED DRIVE ST1800BV Essentially a translator with a built-in oscillator to supply triggering signals. The oscillator frequency can be adjusted to vary the speed from 4 steps per second up to the maximum permissible with the motor used. Have same other characteristics as SLO-SYN Translator ST1800B.

TRANSLATOR MODULES Plug-in printed circuit boards with logic capabilities for stepping SLO-SYN motors. STM1800 and STM1800C are basic translators capable of bidirectional operation of motors. Those suffixed V, i.e. STM1800V and STM1800CV, are similar but have built-in oscillators to provide triggering signals. Potentiometers are supplied with V-suffixed models for adjusting the oscillator speed. STM1800 and STM1800V have speeds to 500 steps/sec and are used with HS and bifilar motors. STM1800C and STM1800CV have speeds to 2000 steps/sec and are used with M Series motors. Types STM1800 and STM1800V require 8 amps power supply transformer T5934-G2. Types STM1800C and STM1800CV require 10 amp power supply transformer T6382.

HIGH SPEED TRANSLATORS Used with precision (HS prefix) and M series (M prefix) motors to provide high stepping speeds. High speed translator HTR400 has 50 to 2000 step/sec speed; HTR103RT has 100 to 3000 step/sec speed; and HTR105RT has 100 to 5000 step/sec speed. Acceleration and deceleration is adjustable. Each pulse received from a built-in oscillator or from an external source will cause the translator to advance the motor one step. Triggering pulses can be supplied by tape readers, computers, oscillators, etc. Ambient temperature: 0°C to 40°C operating; −55°C to 85°C storage. Rack mounted design with plug-in solid-state circuitry.

BUFFERED TRANSLATOR Drives M Series (M prefix) motors in response to commands from computer, digital control or other device which operates at a fixed pulse rate. Acceleration and deceleration not required from pulse source. Translator stores incoming pulses and feeds them to the motor, automatically accelerating and decelerating at a rate compatible with the response characteristics of the motor. Acceleration and deceleration rates are approximately 6000 steps/sec² for BTR103RT and 15,000 steps/sec² for BTR105RT. Motor is driven one step for each pulse received from control unit. BTR103RT has speed of 100 to 3000 steps/sec, BTR105RT has speed of 100 to 5000 steps/sec. Rack mounted only.

PRESET INDEXER SP1800B-5 Controls indexing operations where bifilar motors are used for positioning. Automatically provides the correct switching sequence needed to drive motors the required number of steps. Has provision for actuating external equipment needed to perform related operations. Dials on control panel can be set to provide desired number of steps up to 99,999 counting range. Operates in ambients from 0°C to +40°C. Input current 1.25 amps. Approx. shipping weight 19 lbs.

HIGH SPEED PRESET INDEXERS Used with precision (HS prefix) and M Series (M prefix) motors in indexing and other positioning operations. HPR400R-5 has 50 to 2000 steps/sec speed; HPI 153RT has 100 to 3000 step/sec speed; and HPI 155RT has 100 to 5000 step/sec speed. Decade counter controls on front panel permit selecting positioning increments up to 99,999 counting range. On index command, unit drives the motor the prescribed number of steps and then actuates a relay which controls external equipment. Count can also be set by computer or external decade switches. Ambients: 0°C to 40°C operating; −55°C to 85°C storage. Rack mounted only.

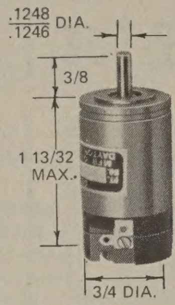
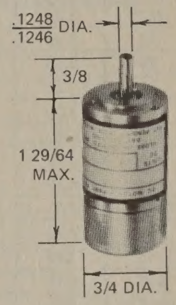
TRW GLOBE MOTORS

D.C. 3/4″ DIA. PERMANENT MAGNET MOTORS AND PLANETARY GEARMOTORS

TYPE SD — BASIC MOTOR





Type SD d.c. motors are designed to meet the requirements of MIL-M-8609; however, designs exceeding this specification to meet customer controlled applications are common. A variety of standard windings are available to provide a wide range of speed and torque characteristics.

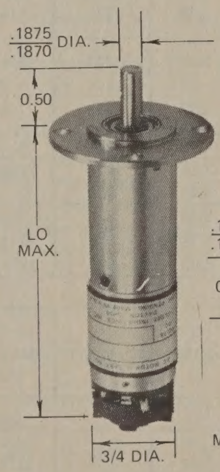
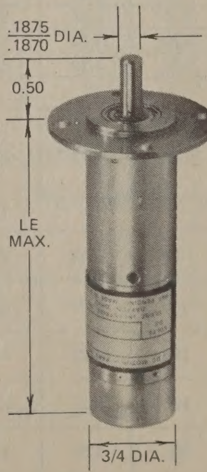
TYPE SD PLANETARY GEARMOTORS





This small size, lightweight gearmotor is comprised of a 3/4″ Type SD motor coupled with a precision planetary geartrain. The combination provides smooth, dependable performance and maximum output torque in the smallest possible space. It is designed to provide a military quality gearmotor of exceptionally compact size.

Max. Cont. Torque: The values in this column are based upon geartrain strength and capability for 1000 hrs. minimum life. Max. rated torque of motor selected x torque multiplier ratio must not exceed these values.
Max. Intermittent Torque = 2 x Max. Cont. Torque.
Momentary Stall Torque = 5 x Max. Cont. Torque.
Minimum Efficiency = Torque Multiplier Ratio divided by Speed Reduction Ratio x 100.

***HOW TO ORDER:**

The complete motor part number consists of the standard part number prefix, shown on the standard part number and data tables, plus the armature dash number. For gearmotors, each of the basic motor windings (dash no.), in the same type basic motor part number table, must be used, with the selected speed reduction ratio.

Max. Cont. Torque: The values in this column are based upon geartrain strength and capability for 1000 hrs. minimum life. Max. rated torque of motor selected x torque multiplier ratio must not exceed these values.

Max. Intermittent Torque = 2 x Max. Cont. Torque.

Momentary Stall Torque = 5 x Max. Cont. Torque.

Minimum Efficiency = Torque Multiplier Ratio divided by Speed Reduction Ratio x 100.

***HOW TO ORDER:**
The complete motor part number consists of the standard part number prefix, shown on the standard part number and data tables, plus the armature dash number. For gearmotors, each of the basic motor windings (dash no.), in the same type basic motor part number table, must be used, with the selected speed reduction ratio.

Momentary Stall Torque = 5 x Max. Cont. Torque.
Minimum Efficiency = Torque Multiplier Ratio divided by Speed Reduction Ratio x 100.

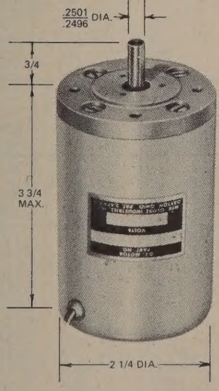
TYPE GRP — BASIC MOTOR



Type GRP precision permanent magnet d.c. motors provide extremely high output and efficiency for their frame size. This unit is designed to meet the requirements of MIL-M-8609; however, designs exceeding this specification to meet customer controlled applications are common. Various standard armature windings make it possible to furnish a wide range of speed and torque characteristics.

TRW GLOBE MOTORS

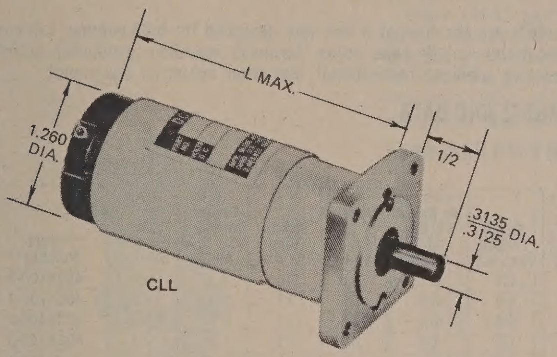
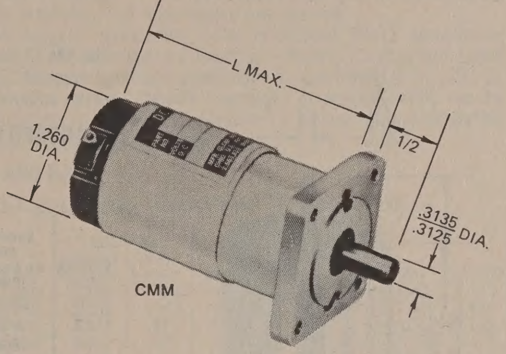
D.C. 1-1/4" DIA. PERMANENT MAGNET PLANETARY GEARMOTORS

TYPE CMM, CLL—PLANETARY GEARMOTORS



CLL



CMM

Type CLL and CMM gearmotors are of the same high quality construction as Globe MM and LL gearmotors and provide the same outstanding performance characteristics although NOT designed to meet MIL-specs for environmental protection. These gearmotors are specifically designed for application where small size, reliability and high torque are desired.

Globe Type CMM and CLL gearmotors are rugged, high-quality units combining Type CMM and CLL commercial motors with a proven planetary geartrain offering 83 standard speed reduction ratios from 4:1 to 46,656:1 with maximum continuous torque from 3.0 to 1250 oz. in. Since the geartrain is of modular design, literally thousands of special ratios can be furnished.

TYPE EM-15 — (1½″ DIA.) PLANETARY GEARMOTORS

Type EM-15 d.c. gearmotors are designed for high-volume, low-cost production. Typical applications include business machines, computer peripherals, audio-visual, automotive, medical, recreational, and other industrial equipment where high torque at lower speeds are needed. Request Bulletin E-2429 for complete details.

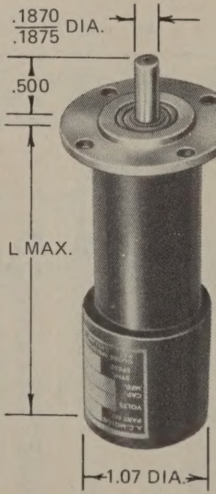
TYPE SC — PLANETARY GEARMOTORS



This extremely small size and lightweight gearmotor consists of a Globe Type SC a.c. motor and a precision planetary geartrain. The combination provides smooth, dependable performance and maximum output torque in the smallest possible space.

Type SC gearmotors are designed to meet MIL-M-7969.

***HOW TO ORDER:**

To specify gearmotors, select the standard part number prefix from the standard part number and data table, plus the speed reduction ratios from page 3110, Type SD — Planetary Gearmotor chart.

*See page 3125 for Schematic drawings.

***HOW TO ORDER:**

The complete motor part number consists of the standard part number prefix, shown on the standard part number and data tables, plus the armature dash number. For gearmotors, each of the basic motor windings (dash no.), in the same type basic motor part number table, must be used, with the selected speed reduction ratio.

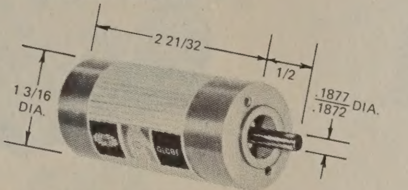
TRW GLOBE MOTORS

A.C. 1-3/16" & 1-1/4" DIA. HYSTERESIS SYNCHRONOUS AND INDUCTION PLANETARY GEARMOTORS

TYPE CMC — BASIC MOTOR



Globe Type CMC motors are designed to meet requirements for extremely compact high-performance synchronous motors in high-quality industrial/commercial products. They are ideally suited to such applications as dictating machines, recorders, business machines, industrial timers, tools, and controls.

Thermosetting plastic encapsulation provides protection against shock and vibration and is impermeable to dirt and moisture.

Induction versions and units for operation at other voltages and frequencies can be provided. Single phase operation requires a phasing capacitor (not furnished by Globe). See page 3125 for schematic drawing J.

TYPE MC — PLANETARY GEARMOTORS

These small, lightweight gearmotors consist of Globe Type MC hysteresis synchronous or induction motors and a precision planetary geartrain. Type MC planetary gearmotors are designed to meet all applicable MIL-specs including high and low temperature and complete environmental protection requirements.

**Synchronous Motor. Output Torque = Torque Multiplier x Motor Torque.
Torque Multiplier = Reduction Ratio x Efficiency. Torque Max. Cont. Rating Refers to Max. Cont. Duty Rating of Geartrain.

***HOW TO ORDER:**

To specify gearmotors, select the standard part number prefix from the standard part number prefix from the standard part number and data table, plus speed reduction ratio desired. See page 3117 for Torque Multiplier and Max. Continuous Torque.

TRW GLOBE FEATURES

All motors have double-shielded, life-lubed ball bearings (—55°C to 85°C) and precision ground stainless steel shafts. Gearmotor shafts may be either stainless or carbon steel. Shaft variations available include length, smaller diameter, flats, pinions, gears, holes, threaded ends, and tapers.

D.C. motors have a life of 1,000 hours continuous duty for 27 v.d.c. models. A.C. motors have a life of 200 to 5,000 hours continuous duty depending on voltage, frequency, number of poles, and gear ratio.

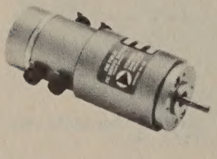
Permanent Magnet

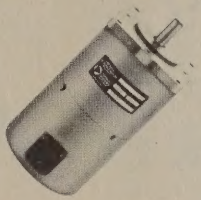
DC Servo Motors & Servo Control Systems

for Analog or High-speed Stepper Applications

Snapper Series Permanent Magnet DC Servo Motors



2212



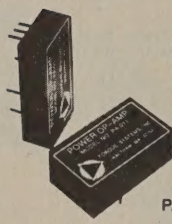
5115

3323

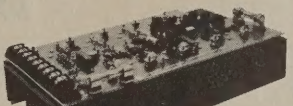
*Optional for all motors

- 10 oz. - inches continuous to 100 ft. lbs. peak torque
- .01 to 15 HP
- 2″ to 9.8″ Frame Sizes
- Acceleration rates up to 50,000 radians/sec^2
- Low Ripple Mating DC Tachometers*
- Integrally Mounted Optical Encoders*
- Double Shaft Extension on Motor/Tachometers*
- Low Cost for OEM use

Wide Bandwidth DC Servo Amplifiers



PA-011



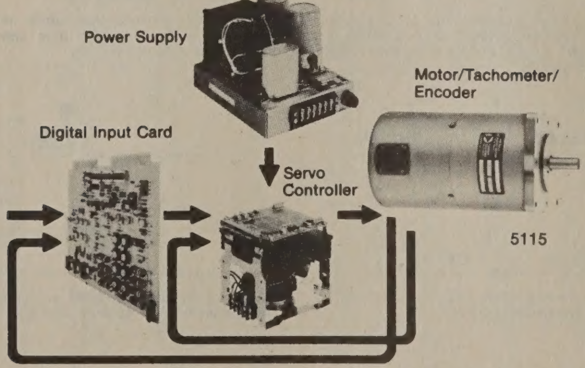
PA-601

PA-122

For Accurate Velocity or Position Control

- Transistorized
- High Gain
- Short Circuit protected
- Priced for volume use
- Bi-directional

Complete Servo Systems



COMPLETE SYSTEMS include, as required, the following Torque Systems' hardware: Motor/Tachometer/Encoder Assembly; Rate Loop Controller Module; Line to DC Power Supply Module; Digital Input Card(s).

For Analog or Digital Velocity or Position – Input Commands can range from Manual to Computer

- Horsepower Ratings 1/20 to over 1/2 HP
- Available as Modules of Pre-packaged
- Accelerations to over 300 rpm/millisecond
- Slew Rates to 50,000 steps per second (3,000 rpm)
- Overshoot Control
- **Microprocessor Based Systems with Programmable Velocity, Acceleration and Position**
- **Synchronized Dual Axis Systems for** smooth **Vector Generation**

DESIGN RELIABILITY AND FLEXIBILITY
Torque Systems manufactures its own Motors, Amplifiers and Power Supplies

NOTES: 1. Vernitorq motors have no friction or ripple torque.

2. Vernitorq brushless tachometer generators are also available in the various frame sizes.

Vernitorq® BRUSHLESS DC TORQUE MOTORS

▪ Limited rotation, wide angle ▪ Infinite resolution for precise positioning ▪ Direct drive for increased sensitivity, and response ▪ Simplified design for economy, compact packaging.

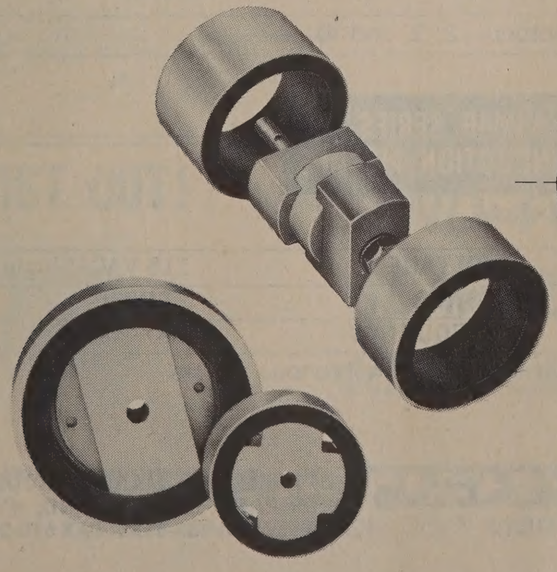
Elimination of brushes, use of toroidal field windings and permanent magnet rotors provides smooth operation without slot effect. Infinite resolution and high linearity result, allowing these motors to provide high accuracy in positioning, actuating, tensioning, measuring and indicating applications for both military and industrial use.

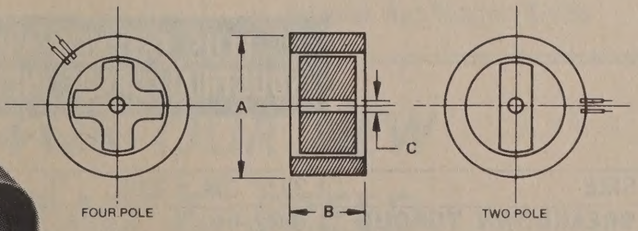
Vernitorq motors develop high torque with low input power and high acceleration rates which make it possible to couple them directly to the driven load without gears. The elimination of gearing aids response and eliminates backlash, gear tooth resilience, acceleration attenuation and other disadvantages of gearing.

Brushless and gearless operation eliminates electrical and mechanical noise; and explosion hazard. It also reduces the number of moving parts and associated friction wear.

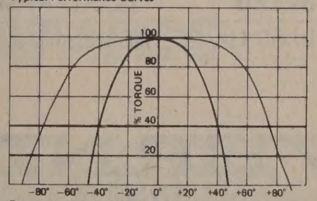
Vernitorq brushless DC torque motors are available in two and four-pole configurations, in a variety of sizes and outputs.

The motors are normally supplied "frameless" — without housing, shaft and bearings. Housed versions, with or without mounting flanges, are also available for all units.





Typical Performance Curves



Output torque vs angular excursion for input current.

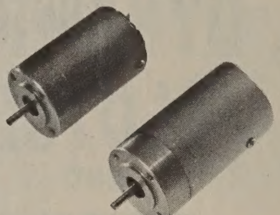
1/100 hp to 1/4 hp

military & commercial

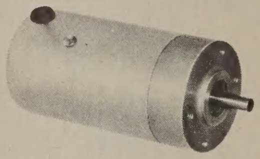
The quality, performance and life of the prototype you get from Wertonix is the same as you get in production. And we can deliver just as fast as a cross-town distributor.

Special low torque speed reducer, enclosed and special blower.

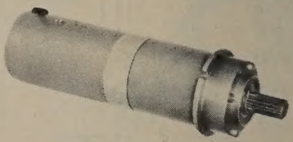
Ratings @ continuous duty.



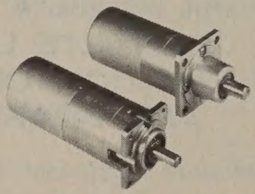
1/100 & 1/65 hp, 3-50 vdc, 4500 to 24,000 rpm, 1-1/4 D. x 2-1/32".



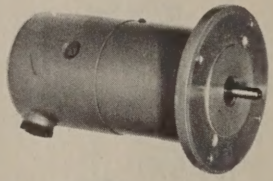
1/45 & 1/30 hp, 3-115 vdc, 3500 to 12,650 rpm, 1-1/2" D. x 2-15/16".



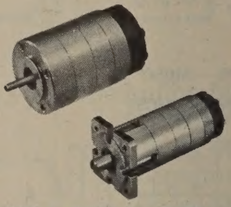
G'Box torques to 1600 oz. in., 3-115 vdc, 0.53 to 3446 rpm, 1-1/2" D. x 4-37/64".



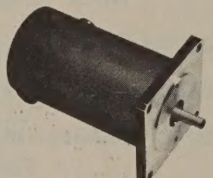
G'Box torques to 1250 oz. in., 3-50 vdc, 0.2 to 6300 rpm, 1-1/4" D. x 4."



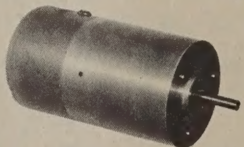
50 & 100 vdc/1000 rpm tach/generator, 3-1/14" D. x 6-1/2"; Low ripple & high linearity.



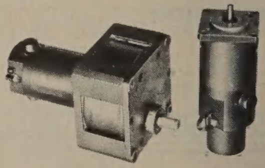
1/100 & 1/65 hp, 3-50 vdc, 4900 to 16,400 rpm, 1-1/4" D. x 1-3/4". Available with G'Box.



1/12 & 1/10 hp, 6-115 vdc, 2600 to 8550 rpm, 2-1/8" D. x 4".



7, 20, 35, & 45 vdc/1,000 rpm tach/generator, 1-1/4" D. x 3-1/4". Ripple — 3% RMS, Alnico V magnet for good linearity.



Special high torque speed reducer with tach/generator.

SQD DEPARTMENT Super Quick Delivery

Work directly with the people who design and build to your standard or special requirements — from sketch or phone call. We can build to specs from scratch, often within 24 hours.

BULOVA® / SCANNERS & CHOPPERS

DRIVERS — LOW COST LOCK IN AMPLIFIER

OPERATING PRINCIPLE AND BASIC FEATURES

The same basic principle, mechanical resonance, is involved in the three basic types of units which are the foundation of Bulova's line of Optical Scanners and Light Choppers. (The fourth, the linear scanner, is a galvanometer movement)

Application of this principle enables design of optical scanning and chopping devices which have many advantageous properties. Chief of these are:

- Reliability: No rotating parts, no bearings, no lubrication; hence no wear and no service problems
- Excellent Accuracy: ±1% usual ±0.1 attainable. Can be any discrete fixed frequency, even fractions of a hertz
- Small Size: Down to 0.5 in.^{3} and less than 0.5 oz.
- Low Power: In milliwatt range.
- Virtually Drift Free: Exceptional stability with time, excellent temperature characteristics
- Reference Signals: Inherently available through driver. Also, an optional, isolated pick-up can be incorporated directly in the scanner or chopper as a signal source.
- Environment: Withstand vibration to 20g, shock to 100g; temperature from cryogenic to 250°C; altitude to space vacuum; radiation >2 x 10^{13} NVT.
- Raster Scan: X-Y mounts and slaved units provide synchronized raster scan.

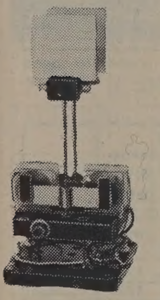
Torsion Bar
Type L45

SCANNERS

Frequencies from d.c. to 16 kHz
Scan Angle to 30°

TORSION BAR

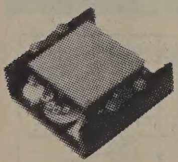
Type L45: Single Mirror
Type L44: Dual Mirror
Frequency: L45, 600 Hz to 16 kHz; L44, 100 Hz to 1000 Hz (any fixed discrete)
Accuracy: ±2% standard
Scan Angle, P to P: 10° max reduces to 2° at higher frequencies. L44, 20° max
Mirror Size: 30mm x 30mm max, reduces as frequency increases
Power: 500 milliwatts, max. with driver



Dual Mirror
Torsion Bar
Type L44

TAUT BAND TYPE L50

Frequency: 5 Hz to 400 Hz (any fixed discrete)
Accuracy: ±2% standard
Scan Angle, P to P: 30° max, reduces with frequency increase to 5° at upper end
Mirror Size: 30 x 30mm, standard max. (This type scanner also can mount larger mirrors.) Reduces as frequency increases.
Power: 500 milliwatts max. with driver

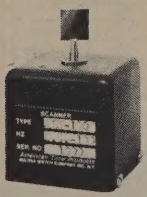


Taut Band
Type L50

LINEAR (Analog) ALS Series

Note: The data given are for one representative model. Contact factory with specific requirements.

Frequency: dc to 300 Hz
Accuracy: ±.05% repeatability, p to p
Mirror Size: 30 x 30 mm Standard, larger available
Scan Angle: p to p: up 30° @ 100 Hz, (greater angles as specials)
Tracking: follows any waveform — ramp, sawtooth, step or combination — linearly
Operating Modes: Tracks analog input with mirror position proportional to input current. Can hold any static angle, move and hold again; scan around any selected "center" left or right of the true center. Centers automatically with current off:
Power: <30mA/degree



Linear
Scanner
Model
ALS 100

MIRRORS

Flatness: 1/2 wavelength standard, 1/4 or better available
Stock Sizes, mm: 30 x 30, 20 x 20, 15 x 15, 10 x 10, 7 x 7, 5 x 5, 2 x 3.

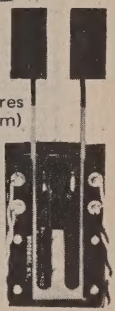
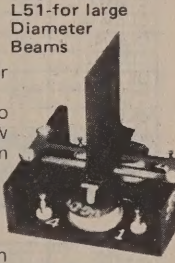
Type L8: L2 with integral driver (1.5" W x 38" H x 1.5 L)
Type L40: (.88 W x .63 H x L up to 2.94)
Frequency: 10 Hz to 3000 Hz (any fixed discrete)
Aperture: Max. (L40): Width 0.6", length .63". All reduce with increase in frequency
Accuracy: ±1% Standard, special to 0.1%
Power: 500 milliwatts max., with driver



Tuning Fork
L40-for Apertures
Up to .6" (15mm)

TAUT BAND TYPE L51C

Frequency: 5 Hz to 100 Hz (any fixed discrete)
Accuracy: ±2% standard
P to P: 30° max. reduces with frequency increase to 5° at upper end. Excursion a function of vane length
Vane: Length 1 1/2" x 1" max. Can chop 1 or two beams to 0.60" diameter. Reduces with frequency increase to 0.30" dia. max. at 100 Hz.
Power: 500 milliwatts, max., with driver



Taut Band
L51-for large
Diameter
Beams

LINEAR (Galvanometer) Type ALC

Frequency: dc to 300 Hz
Vanes & Filters: various to 4 sq. in. area
Scan Angle: to 30° p to p @ 100 Hz, greater available
Operating Modes: shutter, continuous, sweep position step and hold on command, follow analog input for any waveform for beam attenuation.
Power: <30mA/degree

DRIVERS

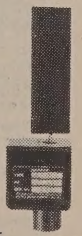
Resonant scanners and choppers can be driven in any one of three modes:

1 Closed loop at the natural frequency of the fork torsion bar or taut band with negative feedback from the pick-up coil;
2 Open loop at the natural frequency; or
3 In a phase lock or frequency lock loop.

Electrical or mechanical dampening can be included to reduce Q and automatic gain control can be added.

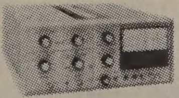
For the analog ALS and ALS-C series, open loop or velocity feedback are available.

All drivers provide a reference signal for synchronizing other devices.



Linear
Galvanometer
Type ALC

LOW COST LOCK-IN AMPLIFIER



Bulova has designed a low-cost Lock-In Amplifier for use with scanners, choppers and other instruments in applications where it is desired to distinguish and pull out weak signals from high back-ground noise. It is available in three forms: cased as a lab bench instrument, for standard rack mounting or for incorporation without casing as a module in OEM's instrumentation.

CL905	.21 X .15	166K		250	50
CL905L	.21 X .15	10K		100	50

Type 5 CdS, peak spectral response 5500 angstroms (closely matches the human eye), most stable, lowest memory photocell available. Can be used in light measuring applications and precision low speed switching. For use with incandescent, fluorescent or neon lamps.

CL705HL	.36 X .18	28K	1:1000	100	125
CL905HLL	.21 X .15	15K		60	50
CL905HL	.21 X .15	100K		100	50
CL905HN	.21 X .15	700K		100	50

Type 5H CdS, peak spectral response 5500 angstroms (closely matches the human eye). Combines high speed, stability, linearity, and uniform color temperature response. Footnote 1. with and without heat sink.

Part No.	Diam. X Length (inches)	Resistance @ 2 ftc ± 33-1/3%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL707H	.36 X .18	500K	1:1000	300	125
CL707HM	.36 X .18	100K		250	125
CL907H	.21 X .15	600K		250	50
CL907HN	.21 X .15	300K		100	50
CL907HL	.21 X .15	24K		100	50

Type 7H CdS peak Spectral response 6200 angstroms. Very fast decay time coupled with low resistance and high linearity. Ideal for beam breaking applications.

CL5M7	.55 X .18	7.2K	1:300	250	2000-500[1]
CL607	.25 X .5	133K		300	75

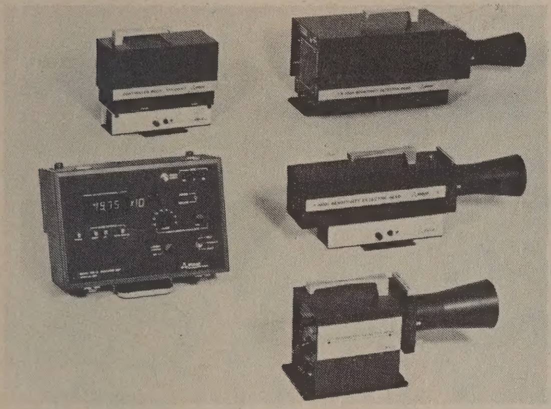
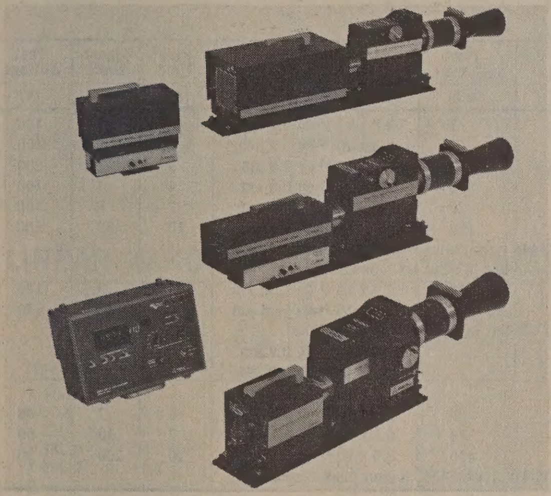
LIGHT MEASUREMENT INSTRUMENTS





MODEL 580 RADIOMETER/PHOTOMETER SYSTEMS

The Model 580 Systems provide fast, accurate measurements of optical radiation in radiometric and photometric terms. The systems are inherently capable of measuring both continuous (cw) sources as well as pulsed events as fast as one nanosecond in duration. An autoranging digital panel display provides readings of average power and integrated energy. The Detector Heads also have provision for oscilloscope display of pulsed light signals so that wave shape measurements can be made, i.e., peak power, pulse duration, and rise and fall times. The spectral range is from 0.2 μm (200 nm) in the ultraviolet to 3.2 μm (3200nm) in the near infrared. The overall dynamic range is over fifteen decades (full scale) of light intensities. The basic system concept can be used in a great variety of applications due to the designed modular approach of interchangeable Detector Heads and accessories. The Model 580 has become an industry standard for most laser output measurements.

MODEL 580/585 SPECTRORADIOMETER SYSTEMS

The Model 580/585 Systems add a digital grating monochromator and additional optics onto the Model 580 Radiometer Detector Head, thereby allowing absolute measurements of the power and energy of chromatic cw and pulsed light sources as a function of wavelength. A truly functional system with provision for recorder ouput and BCD computer interface, the 580/585 can measure over a 12-decade range of light levels. The system can also be used as a radiometer and photometer.

MODEL 550 RADIOMETER/PHOTOMETER SYSTEM

The Model 550 Radiometer/Photometer provides fast, precise measurements with direct readings in 12 photometric and radiometric units. The direct readings, which are easily taken from a 3½ digit panel meter and digital decade indicator, eliminate the need for post measurement calculations. The system is both manual and autoranging over seven full scale decades. Measurements can be obtained of both pulsed and continuous sources with excellent accuracy, repeatability, and stability. Provision for ambient compensation permits its use outside of a dark room environment. High sensitivity is achieved through the use of a single, low noise silicon multiprobe detector.

MODEL 550/555 SPECTRORADIOMETER SYSTEM

The Model 550/555 Spectroradiometer System integrates all the state-of-the-art features of the Model 550 Radiometer with the precision and accuracy of a holographic grating monochromator to yield a low cost, compact, light weight, high efficiency measurement system capable of providing radiometric measurements of both continuous and pulsed sources as a function of wavelength. The Model 550/555 covers a wide spectral region extending from 280 nm in the ultraviolet to 1100 nm in the near-infrared with an absolute system measurement accuracy of ±3%. Ancillary components expand the basic manual system into a completely automatic measurement system with programmable wavelength scan ranges and scan speeds, automatic order sorting filter sequencing, and interface compatibility for automatic data acquisition, conversion, and printout.

Other standard light measurement instruments together with accessories and optical calibration standards are available.
E G & G also offers complete optical calibration services.

CUSTOM PHOTODIODES

In addition to these standard photodiode products, E G & G engineering and production capabilities permit the design and fabrication of custom photodiode devices. Special configurations such as larger and smaller areas, circular and rectangular active areas, arrays, matrices can be manufactured per specific customer requirements. Inquiries for both small and OEM quantities are welcome.

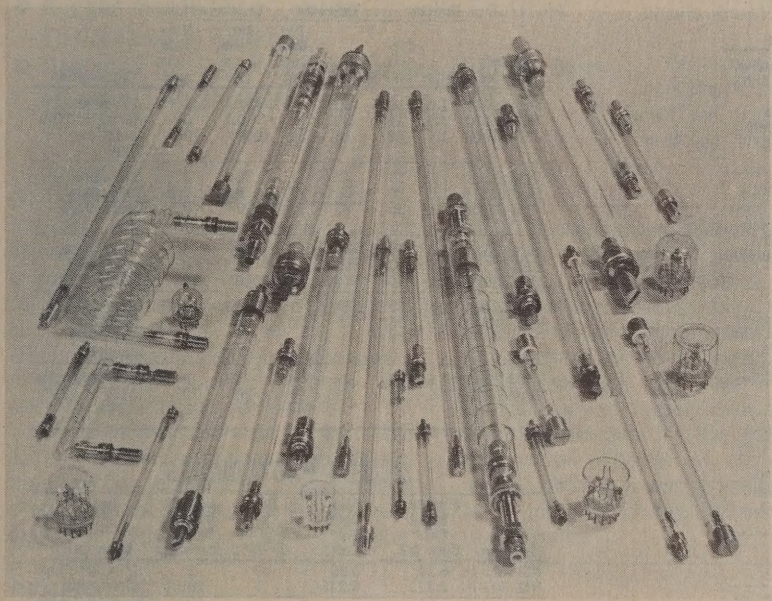
XENON FLASHTUBES



Xenon flashtubes. dc krypton arc lamps, and long arc Xenon lamps are available from E G & G in a wide variety of configurations and envelope materials. Tubes are available in linear, bulb-type, helical, "U" shape, coaxial, and air or liquid cooled designs. Envelope materials include quartz, UV inhibiting quartz, and hard glass with a wide range of bore and arc length sizes. Custom configurations are available upon request.

Common applications involve the use of these lamps as the primary light source for:

Laser stimulation
Photocopy systems
Phototypesetting machines
Microfiche systems
Strobes
UV curing of polymers
Marine, aircraft and satellite beacons
Warning beacons
Photoresist exposure
Large area indoor lighting

RAYTHEON

OPTO-ISOLATORS—RAYSISTORS® PHOTOCONDUCTIVE CELLS

RAYTHEON OPTOELECTRONICS

- **Standard and "State of the Art" Opto-Components**
- **Improved Cost/Performance Ratios**
- **Rugged Mechanical Construction with Certified Environmental Reliability**
- **Designed for Both Commercial and Military Optoelectronic Applications**

Raytheon is a specialist in the development and manufacture of quality, competitively priced photo-conductive cell/arrays and photo-optical isolators (Raysistors®). These components are designed with characteristics and features that meet the requirements of the various optical and/or isolation circuits in use today or in development for the future.

Raytheon standard photocells and arrays have been used effectively for more than a decade in a wide range of applications at all levels of industry. Raytheon is also prepared to comply with requests for special products to meet your specific application or required characteristics.

OPTO-ISOLATORS RAYSISTORS®

Raysistor is a Raytheon trade mark for an optoelectronic circuit component (photo-optical isolator). The Raysistor combines a reliable energy emitter source (incandescent, neon, or light-emitting diode) and a bulk-effect photo-resistive element. A wide variety of package configurations, ratings, and electrical characteristics are available.

Raysistors perform a variety of switching and control functions where isolation between the controlling element and the controlled circuit is critical. The characteristics of these devices demonstrate their versatility, sensitive control property, circuit isolation, and lack of distortion in the signal. In addition to their suitability for general feedback systems, Raysistors are especially attractive for AGC, Logic Translation facsimile and photo multiplier systems, voltage or signal isolators, variable resistors, SCR and Triac firing circuits, signal modulators for audio effects, solid-state switches, etc. For dual function controls, the Raysistor is produced with multiple photo-cells and/or energy emitters to provide excellent tracking and matching characteristics.

PHOTOCONDUCTIVE CELLS

Raytheon's extensive line of photo-conductive cells and arrays represents the "state of the art" in stability and uniformity of characteristics with aging. They are available in a wide range of sensitivities.

Standard Raytheon photocells are available in four different spectral response photosensitive materials, each of which exhibit its own individual optical characteristic. A variety of packages are available, including hermetically sealed, single or dual element, and plastic coated. Plastic coated devices are passivated for long term environmental protection.

GENERAL NOTES

1. Energy emitter source: "N"-neon, "I"-incandescent, "L"-light emitting diode (LED). See tables.
2. Indicated control voltages or current will ensure long life. Constant operation at higher voltages will result in modified life expectancy. (Incandescent designs are derated to insure long life.)
3. "ON" Resistance: Measured after 16 hours of operation. All resistances measured with 1.5 volts applied to signal terminals.
4. Control to signal circuit isolation: Values indicated are maximum potentials (DC or peak AC) that can be applied between control and signal circuits. Tested per MIL STD 202D, Method 301.
5. "OFF" RESISTANCE: Measures 5 seconds after removal of control voltage or current. Ultimate dark resistance is many times greater.
6. Maximum Cell Voltage: Voltage applied to cell must not exceed specified maximum. Maximum voltage is normally present when cell is in dark condition.
7. Cell Power Dissipation: Ambient temperature directly effects maximum power dissipation of photoconductive cells. Rated power dissipation applies when device is operated at 30°C or below. Derating curves are specified on individual data sheets.
8. Response Speeds:
   - 8.1 "RISE TIME": Defined as time for voltage across photocell to fall to 10% of its initial value, measured from instant that maximum rated control voltage or current is applied to energy emitter source.
   - 8.2 "DECAY TIME": Defined as time for voltage across photocell to rise to either 50% or 90% of its final value from instant that maximum rated control voltage or current is removed from energy emitter source. Percentage values depend on specific component. Majority are 90%.
   - 8.3 Test Conditions:
     Control Voltage/Current—As Rated
     Signal Voltage—50 Volts DC
     Signal Circuit Load—100K Ohms
9. Capacitance: Measurements made in dark condition.

*Current limiting resistor must be used in series with neon light source. Typical value: 20 K ohms (100 K ohms for CK 1124). Control current is linear with voltage over stated range.
†Current limited source required for control input. Stable operation is best achieved with a constant current power supply, which may be approximated by stable voltage supply having a resistor in series with the LED. Control circuits of LED devices may also be driven by AC voltages by placing a rectifier diode in series of parallel with the LED.

*Current limiting resistor must be used in series with neon light source. Typical value: 20 K ohms (100 K ohms for CK 1124). Control current is linear with voltage over stated range.

†Current limited source required for control input. Stable operation is best achieved with a constant current power supply, which may be approximated by stable voltage supply having a resistor in series with the LED. Control circuits of LED devices may also be driven by AC voltages by placing a rectifier diode in series of parallel with the LED.

††Signal Circuit ratings are for each half of cell. Typical dual isolators Cell to Cell resistance balance 90%, resistance tracking 10%.

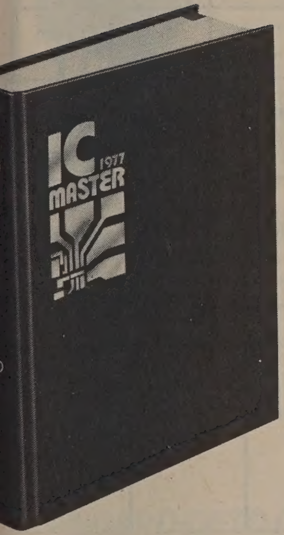
WHEN THE CHIPS ARE DOWN...

THE NEW 1977
IC MASTER
PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

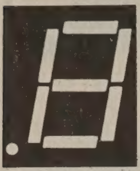
NOW!...SPECTRONICS LARGE NUMERIC DISPLAYS IN SINGLE AND MULTI-DIGITS

Spectronics has the VLEDS you need for large numeric display applications . . . in red single and multi-digits.



Single-Digits SPX 300 and 500 series single-digit numeric displays feature wide viewing angles, continuous uniform segments and high contrast. Plus, they are categorized for uniformity of luminous intensity and are available in both common cathode and common anode configurations. SPX 300 characters are .3 inches high; SPX 500 characters are .5 inches high. Plus and minus — left and right decimal points offered.

Multi-Digits For multi-digit applications, Spectronics offers the SPX 766 and SPX 767. Both displays feature .7 inch-high characters, colon, plus and minus.

For special multi-digit applications give us the opportunity to quote on your requirement.

THE
ELECTRONIC DISTRIBUTORS
MASTER CATALOG
FORMERLY: OFF-THE-SHELF CATALOG
THE ONLY NATIONAL CATALOG OF ELECTRONIC PARTS, INSTRUMENTS AND EQUIPMENT DESIGNED EXCLUSIVELY FOR DISTRIBUTORS AND THEIR CUSTOMERS.

YESTERDAY'S RADIO MASTER IS TODAY'S

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

PHOTOCONDUCTIVE CELLS

LIGHT DEPENDENT RESISTORS

Photoconductors are thin films of CdS or CdSe on a ceramic substrate.
The material is designated by the second digit (O, 1, 2, 3, 4 or 7) of the part number.

Material	0-CdS	1-CdSe	2-CdS	3-CdS	4-CdSe	7-CdS

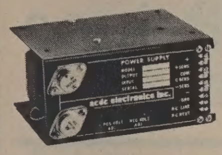
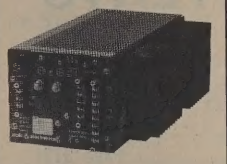
PRODUCTS AND CAPABILITIES



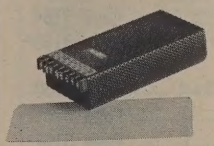
OEM The Value Engineered Series

The OEM series features the low price and compatible construction to meet the needs of today's OEM manufacturers—large and small. With excellent stability, overload protection and built-in convection cooling, the OEM series provides new flexibility in power supply systems designs. Single, dual & triple output.



JP&JT High Efficiency Switching Power Supplies

These 20KHz inaudible switching power supplies operate from a selectable input of 115/230 VAC, 47 63Hz with 70% efficiency and 0.1% regulation. Overvoltage and overload protection is standard and radiated, and conducted EMI is minimized by shielding and filtering. Eighteen models cover the range. Single and multiple output. 48 VDC input available.

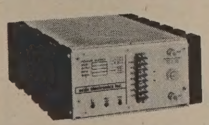


JR Miniaturized High Efficiency Switching Power Supply

Still the leader in miniaturized power supplies, this compact, precision-regulated DC supply provides AC conversion, isolation, regulation and low output noise (only 25 mv p-p) in a slim, light package. At only one-fifth the usual size and weight, it's the answer to those "impossible" packaging problems.

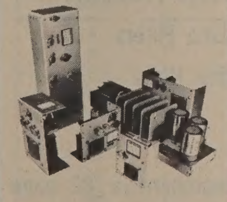
PCM Miniature Encapsulated Power Supply Modules

Available with either single or dual outputs, these miniature encapsulated power supply modules are particularly applicable for driving operational amplifiers, digital logic, shift registers, ROMS, RAMS, A-D and D-A converters and other signal conditioning instrumentation.



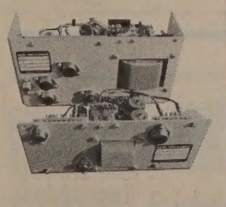
HCM High Current Power Supplies

There are 10 models in this new series with ratings from 25 amps @ 28 volts to 100 amps @ 5 volts. Two case sizes and two current ratings for each of five output voltages: 5, 12, 15, 24 and 28 volts. Overvoltage protection available. Excellent for multi-input applications.



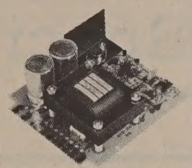
EC Low Cost Power Supplies

No bells and whistles. No fancy frills or extras. 42 single output models from 2v @ 3A to 24v @ 10A. Double and triple output models, too. Electrically and mechanically interchangeable in form, fit and function with other open frame power supplies that meet accepted industry standard. 2 year guarantee. Optional overvoltage protection.



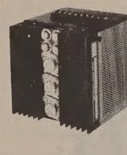
MP Microprocessor Power Supplies

The unique demands of microprocessor-based systems and their increasing popularity has resulted in the development of a special breed of low-cost power supply. ACDC's MP Series are designed to power a wide range of micros, including the 8080A. These devices offer 0.1% regulation, and come with a 24-month guarantee. Delivery is from stock.



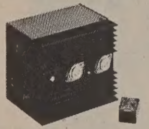
CD A Complete Regulated DC Power Supply On A Card

Designed for versatile mounting inside your equipment, the compact size of the CD series lets you put your power supply right where it's needed. This addition to the growing line of ACDC power supply modules has all of the performance features you need—stability, regulation and floating output. Lowest prices, and off-the-shelf delivery, too!



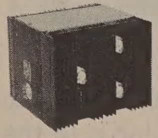
IC Optimum Performance For IC Applications

A complete line of power supply modules designed to deliver optimum performance with IC circuits. Overvoltage and overload protection, plus stability and regulation matched to the application, make the IC series first choice in digital logic designs.



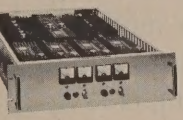
OA Dual Output Power Supply Module For OP Amps

Built-in tracking and long-term stability are the special features of our OA series power supply modules. Both regulation and temperature stability are optimized to assure the best performance in your op-amp applications. Size and weight are ideal for rack mounting. 0.01% regulation.



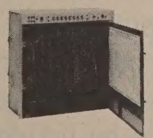
BX Precision Power Supply Modules

All of the high performance features you need are available in these precision power modules. For minimum output impedance and ripple, coupled with 0.01% regulation, specify the BX series.



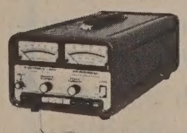
III Rack Systems

ACDC's new standardized rack system. It provides you with a method for packaging total power supply systems in a single compact unit...quickly, easily, economically. Five basic models, all designed to fit standard 19" racks. Available in kit form, factory assembled, and/or factory wired.



CPS Custom Power Supplies

Power supplies including such features as auto-progression, margining, sequencing, transistor switching, phase control and series regulation, as well as special packaging configurations.



EL750 Electronic Load Instrument

A precision, programmable instrument for static and dynamic testing of DC power sources. Dissipates up to 750 watts of DC power. Selectable constant current or constant resistance operating modes. Load current is programmed by external DC voltage. Dynamic loading is accomplished by integral square wave generator or by various externally applied waveforms.

abbott Power Supply Modules

The Next 12 Pages List 680 Regulated Modules with Specifications and Prices

The most complete line of small size MIL-Spec and OEM type power modules available in the industry is fully described in the following 12 pages. The Abbott line of power modules includes output voltages from 3 volts to 100 volts DC, output current from 2 milliamperes to 20 amperes and output power from 1 watt to 300 watts. Sizes, weights, regulations and environments are shown for the various input and output powers. Abbott is proud to continue its policy of introducing new products to meet the growing demands of our customers by listing a completely new line of power modules. The Model D Series is a high efficiency, industrial DC power supply. Inputs are 115 VAC, 220 VAC, 1ϕ, 3ϕ and 48 VDC. Look through the next 12 pages and you may find the power module you want is a standard Abbott model.

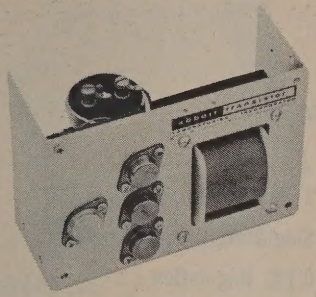
abbott AC to DC Lowest Cost



features

- 110/220 VAC Input
- Single, Dual, and Triple Outputs
- +71° Ambient Operation
- 47-440 Hz Input Frequency
- Hi-Reliability

specifications

INPUT VOLTAGE RANGE: 105 to 125 VRMS, standard. 210 to 250 VRMS available at no additional charge. To specify this type range, add the prefix "E" to the Model No. (eg. ENLS5T3).
105 to 125/210 to 250 dual input available for an additional charge of $5.00. To specify this range, add the prefix "I" to the Model No. (eg. INLS5T3).

INPUT FREQUENCY: 47-440 Hz, single phase (derate current 10% for 50 Hz operation).

LINE REGULATION: 0.02% for 10% input change (single output).
0.1% for 10% input change (dual/triple output).

LOAD REGULATION: 0.1% for no load to full load change with line constant (single output).
0.2% for no load to full load change with line constant (dual/triple output).

RIPPLE: 1.0 mV RMS maximum; 1.5 mV peak-to-peak typical, 5 mV peak-to-peak maximum.

LOAD TRANSIENT RECOVERY TIME: 50 μSec typical after a 50% step change in load current.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against a short circuit of any duration. The output voltage automatically restores to normal in approximately 5 mSec after removal of the short.

REVERSE VOLTAGE PROTECTION: Provided on output and on pass element.

REMOTE ERROR SENSING: Each unit contains a means by which the regulator circuit monitors the voltage directly at the load using extra sensing leads. The resulting circuit action compensates for a DC voltage drop of up to 0.5 Vdc in the load leads. Open sense lead protection is built-in.

STABILITY: Typically, ±.05% for 24 hours after warm-up (single output), and ±0.3% for 24 hours after warm-up (dual and triple output).

TEMPERATURE: Operating: 0°C to +50°C, derated to 40% at +71°C.
Storage: −40°C to +85°C.

TEMPERATURE COEFFICIENT: ±.04% per degree Celsius maximum, ±.002% per degree Celsius typical.

EFFICIENCY: Typically 45% to 60%.

ENVIRONMENT: Designed to meet vibration per MIL-STD-810B, Method 514, Procedure 1, and shock per MIL-STD-810B, Method 516, Procedure 5.

OVERVOLTAGE PROTECTION: Standard on 5V outputs. Available on all other outputs as an optional feature by adding "-1" to the Model No. Cost is $8 for single outputs and $16 for dual and triple output units.

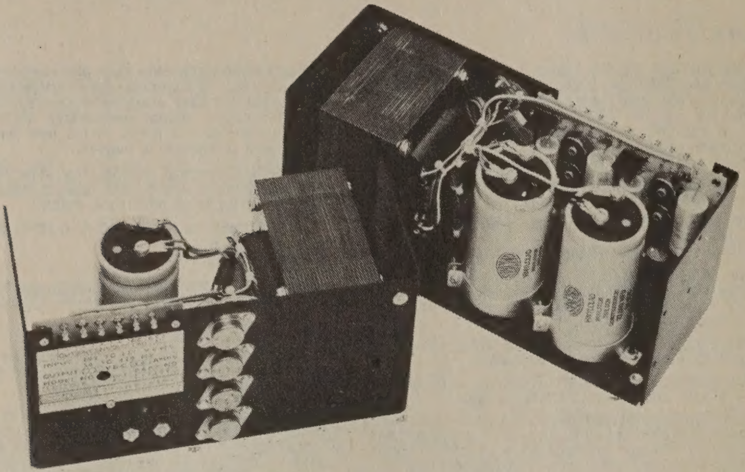
AC to DC Low Cost

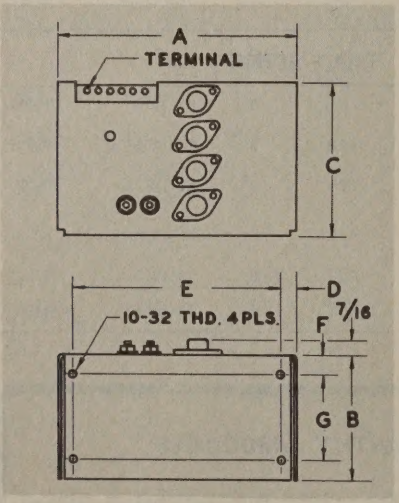


features

- 1 Day Stock Delivery
- Single and Dual Outputs
- 0.1% Regulation
- +60°C Ambient Operation
- 47-420 Hz Input Frequency

DELIVERY FROM STOCK

These reliable Abbott power modules are designed to meet the needs of OEM engineers. For their intended application, these units are not only rated high in overall quality, but also priced relatively low. Thus, they provide more quality per dollar compared to similar items on the market. Your best buy in OEM power modules is ABBOTT.



Size	A	B	C	D	E	F	G

L5	10	4	4¾	½	9	⅝	2¾
L6	10¾	4	4¾	½	9¾	⅝	2¾

specifications

INPUT VOLTAGE RANGE: 103 to 127 VRMS.

INPUT FREQUENCY: 47 to 420 Hertz, 1 Phase.

LINE REGULATION: 0.1% or 10 mV (whichever is greater), for input change of 103 to 127 VAC.

LOAD REGULATION: 0.1% or 10 mV, (whichever is greater), from no load to full load.

RIPPLE: 10 mV rms; 30 mV peak-to-peak.

OUTPUT VOLTAGE ADJUSTMENT RANGE: Voltage is continuously adjustable between the limits shown on the table by means of a screwdriver adjustment potentiometer.

ISOLATION VOLTAGE: 300 VDC between output terminals and chassis ground.

INSULATION RESISTANCE: 50 megohms between output terminals and chassis ground when measured at 50 VDC.

POLARITY: Inputs and outputs are isolated, either positive or negative side may be grounded.

TEMPERATURE: Operating: 0°C to +50°C ambient without derating, forced air or heat-sinking. Storage: −50°C to 85°C.

TEMPERATURE COEFFICIENT: 0.08% per degree Celsius.

ALTITUDE: 10,000 feet above sea level.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed within approx. 25 msec.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 75 microseconds after a 50% step change in load current. Maximum overshoot/undershoot is 5% of nominal output voltage.

TURN ON/TURN OFF OVERSHOOT: The output voltage overshoot during "turn on" or "turn off" will not exceed 1% of the output voltage.

REMOTE ERROR SENSING: Each unit contains a means by which the regulator circuit monitors the voltage directly at the load using extra "sensing" leads. The resulting circuit action compensates for a DC voltage drop up to 0.5 volts in the load leads.

OVERVOLTAGE PROTECTION: Additional circuitry will reduce the output voltage to approximately 1 VDC within 25 μsec typ., if the output voltage rises 10% or 2 VDC (whichever is greater) above nominal. Available as an optional feature by adding "-1" to the model number and $8 ($16 for dual output units) to the 1-24 piece price.

OUTPUT IMPEDANCE: DC to 1K Hz — .003 R_L ohms or .03 ohms, whichever is greater.
1K Hz to 10K Hz — .008 R_L or .08 ohms, whichever is greater.
10K Hz to 100K Hz — .015 R_L or .30 ohms, whichever is greater.
R_L = rated load resistance.

RELIABILITY: The Mean Time between failure (MTBF) per MIL-HDBK-217A under worst case operating conditions is in excess of 100,000 hours per single output units and in excess of 70.000 hours per dual output units. For example: LC12T10 - 114,268 hours (MTBF); LC28T1 - 158,290 hours (MTBF); LLC12T5 - 75,593.

SINGLE OUTPUT

Output Voltage Range	Output Curr. (Amps)	Size (See Dwg)	Wt. (Lbs.)	Model Number	Price 1-24 Pieces
4.5 - 5.5	6.0	L1	5.5	LC5T6	$62.00
	10.0	L3	12.5	LC5T10	82.00
11.5 - 12.5	2.5	L1	5.5	LC12T2.5	62.00
	5.0	L2	8.7	LC12T5	73.00
	10.0	L3	12.5	LC12T10	99.00
14.5 - 15.5	2.0	L1	5.5	LC15T2	62.00
	4.0	L2	8.7	LC15T4	73.00
	8.0	L3	12.5	LC15T8	99.00
23 - 25	1.2	L1	5.5	LC24T1.2	62.00
	2.5	L2	8.7	LC24T2.5	73.00
	5.0	L3	12.5	LC24T5	99.00
27 - 29	1.0	L1	5.5	LC28T1	62.00
	2.1	L2	8.7	LC28T2.1	73.00
	4.3	L3	12.5	LC28T4.3	99.00

DUAL OUTPUT

Output Voltage Range	Output Curr. (Amps)	Size (See Dwg)	Wt. (Lbs.)	Model Number	Price 1-24 Pieces
±11.5 - ±12.5	1.2	L4	6.0	LLC12T1.2	$87.00
	2.5	L5	9.2	LLC12T2.5	93.00
	5.0	L6	13.5	LLC12T5	119.00
±14.5 - ±15.5	1.0	L4	6.0	LLC15T1	87.00
	2.0	L5	9.2	LLC15T2	93.00
	4.0	L6	13.5	LLC15T4	119.00

Dual Output Units:

1. Both outputs are isolated and non-tracking so each output can be used as a completely separate power supply.
2. The output current listed is for each output voltage.

DUAL OUTPUT

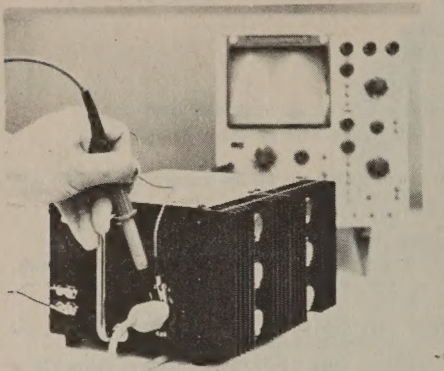
Output Voltage Range	Output Current (Each Side)	Size	Weight (Lbs.)	Model Number	Price 1-24 Pcs.
±11-±13	1.2	3C	8.0	RRN12S1.2	$141
	2.5	3D	11.0	RRN12S2.5	157
	5.0	3F	21.0	RRN12S5	262
±14-±15	1.2	3C	8.0	RRN15S1.2	141
	2.5	3D	11.0	RRN15S2.5	157
	5.0	3F	21.0	RRN15S5	262

Note: Both outputs are isolated and non-tracking, so each output can be used as a separate power supply.

* See Page 3160 for size charts Note: Other standard models are available. For complete information, please consult our nearest office.

abbott DC to 60 ∿ 1 φ

DC TO 60 Hz INVERTERS



features

- Sine Wave Output
- 12, 24, 28, 36 VDC Inputs
- Low Cost
- High Reliability
- −20°C to +55°C ambient operation
- Reverse Polarity Protection

specifications

INPUT VOLTAGE RANGE: 11 to 15 VDC for KN's; 22 to 30 VDC for PN's; 29 to 38 VDC for LN's
OUTPUT VOLTAGE: 115 VAC ±2% 60 Hz or 220 VAC ±2% 50 Hz
OUTPUT FREQUENCY STABILITY: ±2 Hz
LINE REGULATION: 3% for specified input voltage range with load constant
LOAD REGULATION: 3% for load change of half load to full load with line constant: 6% for change of no load to full load
WAVE FORM: Sine wave with maximum 5% distortion
LOAD POWER FACTOR: Full rated output VA from unity to 0.7 PF lagging or leading
EFFICIENCY: At full load and nominal input voltage: 40% minimum on KN's; 50% minimum on PN's; 58% minimum on LN's
OPERATING TEMPERATURE RANGE: −4°F to +131°F (−20°C to +55°C) ambient air temperature
INPUT TRANSIENT PROTECTION: 45 VDC for 0.1 second
ALTITUDE: 10,000 feet above sea level
OVERLOAD PROTECTION: Magnetic type circuit breaker

DELIVERY FROM STOCK

Abbott has designed a new line of quality, low cost DC to 60 Hz Sine Wave inverters. These units will convert DC battery voltage to regulated 60 Hz power to drive any AC equipment, such as, lamps, compressors, motors, televisions, radios, power tools, appliances, test equipment, etc. Surge current capabilities of these units is up to 3 times rated output power.

Input Voltage Range (VDC)	Output Power (VA)	Size (See Below)	Weight (Lbs.)	Model Number 115 VAC, 60 Hz Output	Model Number 220 VAC, 50 Hz Output	Unit Prices 1-4 pcs.

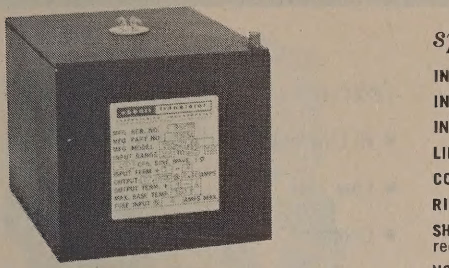
abbott 60 ∿ to DC Hermetically Sealed



features

- Compact
- Hermetically Sealed
- Close Regulation
- High Reliability
- 5 to 740 Volts

specifications

INPUT VOLTAGE RANGE: 105 to 125 volts AC

INPUT FREQUENCY RANGE: 55 to 65 Hertz, 1 phase

INPUT TRANSIENT PROTECTION: In accordance with MIL-STD-704A, Figure 3, Limit 1 (180 VAC for 0.1 sec.)

LINE REGULATION: ±0.2% for 105-125 VAC input, with constant load

COMBINED LINE AND LOAD REGULATION: ±0.5% for 105-125 VAC input and load variation of ½ to full load

RIPPLE: 0.2% RMS

SHORT CIRCUIT PROTECTION: Protected against short circuit conditions of any duration. Output automatically recovers upon removal of short.

VOLTAGE ADJUSTMENT RANGE: 12% by screwdriver adjustment

TEMPERATURE: +160°F (+71°C) maximum at mounting base using adequate heat sink
−4°F (−20°C) minimum at mounting base
Storage: −30°C to +85°C

RELIABILITY: 80,000 hours.

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-STD-810B including: altitude, vibration, shock, acceleration, sand, dust, humidity, saltspray, fungus, explosion, etc.

ISOLATION: Inputs, outputs, and case are isolated so that either a plus or minus output voltage polarity can be obtained.

OUTPUT VOLTAGE AND CURRENT: See specific models listed

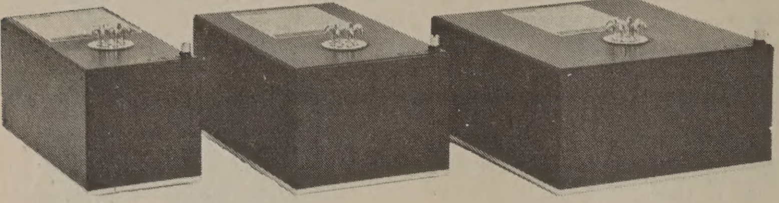
abbott AC to DC Hi-Efficiency



features

- Hi-Efficiency (64 to 77%)
- Low EMI
- Compact
- +160°F Operation
- Hi-Reliability
- Hermetically Sealed

specifications

INPUT VOLTAGE RANGE: 115 VRMS, ±10%

INPUT FREQUENCY RANGE: 47 to 440 Hz, 1 Phase

EFFICIENCY: Typical efficiency ranges from 64 to 77%

OUTPUT VOLTAGE AND CURRENT: See specific models listed in tables

LINE REGULATION: 0.4% or 50 mv (whichever is greater) for input change of 103.5 to 126.5 VRMS with load constant

LOAD REGULATION: 0.4% or 50 mv (whichever is greater) from no load to full load with line constant

RIPPLE AND NOISE (PARD): 0.2% plus 125 mv peak-to-peak from +25°C to +71°C. At 0°C peak-to-peak ripple increases to 0.4% plus 200 mv maximum. Measurements made with a scope having a 25MHz bandwidth

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table by means of an externally accessible screwdriver adjustment potentiometer

ADJUSTMENT RESOLUTION:

Nominal Output Voltage	Resolution
3-16 VDC	35 millivolts
18-50 VDC	60 millivolts

ISOLATION VOLTAGE: 500 VDC input to output and input to case, 100 VDC output to case.

INSULATION RESISTANCE: 50 megohms minimum between input and output, input and case, and output and case when measured at 50 VDC

POLARITY: Inputs and outputs are isolated, either positive or negative side may be grounded

TEMPERATURE RANGE: Operating: 0°C (32°F) to +71°C (+160°F) baseplate temperature. Storage: −55°C (−65°F) to +85°C (+185°F)

TEMPERATURE COEFFICIENT: 0.03% per degree Celsius maximum

ENVIRONMENT: Hermetically sealed and encapsulated to meet severe environmental requirements, including:
Vibration: MIL-STD-810B, Method 514, Procedure I, Curve H (±10g's) and Procedure XII. Also MIL-STD-167B, Type I
Shock: MIL-STD-810B, Method 516, Procedure II (75g's crash safety)
Humidity: MIL-STD-810B, Method 507, Procedure I
Saltspray: MIL-STD-983E, Paragraph 4.4.12
Saltfog: MIL-STD-810B, Method 509, Procedure I.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit of any duration

INPUT TRANSIENT PROTECTION: Unit will withstand 180 VAC for 0.1 second in accordance with MIL-STD-704A, Figure 3, Limit 1

OVERVOLTAGE PROTECTION: Available as separate modules.

REMOTE ERROR SENSING: Each unit contains a means by which the regulator circuit monitors the voltage directly at the load using extra "Sensing" leads. The resulting circuit action compensates for a DC voltage drop up to 0.3 volts in the load leads

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 7 msec. after a 50% step change in load current. Maximum over/undershoot is less than 0.8 VDC or 3% of the output voltage, whichever is greater

OUTPUT IMPEDANCE: DC to 1 KHz: .04 R_L or 0.1 ohm, whichever is greater. 1 KHz to 10 KHz: .06 R_L or 0.15 ohms, whichever is greater. 10 KHz to 100 KHz: .08 R_L or 0.4 ohms, whichever is greater.
R_L = Rated Load

ELECTROMAGNETIC INTERFERENCE: EMI filters are used in each unit for suppression of conducted interference

RELIABILITY: The Mean Time Betwen Failure (MTBF) per MIL-HDBK-217A under worst conditions of full rated output current, 126.5 VAC input voltage, and **40°C baseplate temperature was calculated to be 50,000 hours.**

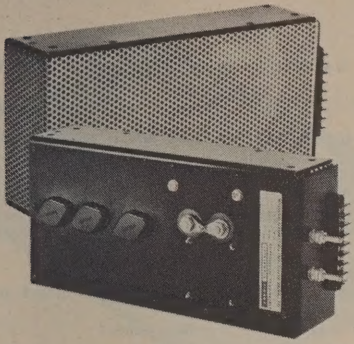
abbott AC (1φ/3φ) or 48 Vdc to DC Hi-Efficiency



features

- 1.3 watts/in³
- Universal 1φ & 3φ AC input
- 48 Vdc input
- Up to 80% efficient
- Operation to −20°C

AC INPUT — MODEL DA'S

Output Voltage	Output Current* (Amps)	Size	Model Number	Price 1-9 pcs.
5	10.0	D1	DA50-5	$345

	5.0	D5	DC150-15	375

*For dual output units, output current listed is for each output.

SIZE CHART

Case Size	Width	Depth	Height
D1	5.5	9.4	2.0
D2	5.5	10.2	2.0
D3	5.5	10.5	2.5
D4	5.5	11.0	2.5
D5	5.5	11.2	2.5

specifications

INPUT: DA Models: 103.5 to 126.5 Vrms, 1φ or 3φ"Y";
207 to 253 Vrms, 1φ or 3φ"△";
47 to 500 Hz
DC Models: 41 to 52 Vdc

EFFICIENCY: Minimum efficiency at full load is 60%. Efficiency typically ranges from 63% to 80%, depending on output voltage/power.

AC INRUSH CURRENT: Limited by series power thermistors.

LINE EFFECT (REGULATION): Less than 0.5% over full input range.

LOAD EFFECT (REGULATION): Less than 0.5% from no load to full load.

PARD (RIPPLE & NOISE): Less than 100 mV p-t-p, 0°C to +71°C, when measured with an oscilloscope with a 1 MHz bandwidth.

OUTPUT VOLTAGE ADJUSTMENT: Output is factory set to within 1% of nominal voltage. Units may be trimmed up to 6% above nominal voltage by means of external resistance. Remote voltage adjustment/programming is available as an optional feature. With this feature, output can be adjusted ±6% from nominal. This option can be specified by adding "-1" to the Model No. e.g., DA50-5-1 indicates inclusion of this feature. Charge is $10 additional for 1 to 9 pieces.

ISOLATION: Voltage — 500 Vdc input to case, input to output; 100 Vdc output to case. Resistance — 50 megohms @ 50 Vdc input to case, input to output, output to case.

TEMPERATURE RANGE: −20°C to +71°C ambient operating temperature. See load vs. temperature curve below.

THERMAL PROTECTION: Power shutdown if temperature exceeds safe operating limits.

TEMPERATURE COEFFICIENT: 0.01%/°C typical; 0.03%/°C maximum.

SHORT CIRCUIT PROTECTION: Complete protection from short circuits of any duration. Automatic recovery when short is removed.

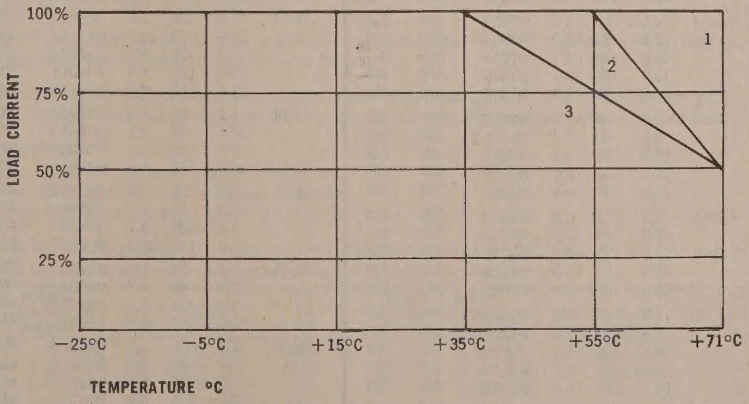
OVERVOLTAGE PROTECTION: Standard on all units. Set at 6.2 ±0.5 Vdc on 5V units, 14 ±1 Vdc on 12V units and 17 ±1 Vdc on 15V units.

REMOTE ERROR SENSING: Sensing terminals are provided to compensate for up to 0.5 Vdc drop in the load leads. Open sense lead protection is also provided.

LOAD TRANSIENT RESPONSE: Output returns to regulation band within 1.0 mS after a 50% step change in load current.

TURN-ON/TRANSIENT OVERSHOOT: Maximum output voltage overshoot is less than 0.8V under all conditions.

HOLDUP TIME: Typically 20 mS at full load and nominal line voltage.



1 All units, case temperature
2 All units except DA200-5 and DC150-5, ambient temperature
3 DA200-5 and DC150-5, ambient temperature

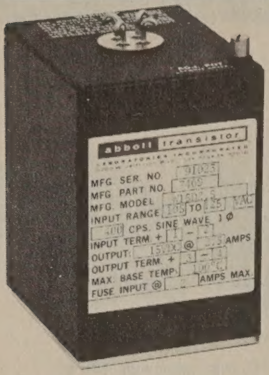
abbott 400 ∿ to DC Hi-Performance Single & Dual Output



features

- Low Peak-to-Peak Ripple
- RFI/EMI to MIL-STD-461
- Small
- Hermetically Sealed
- +100°C Operation
- 0.1% Regulation

specifications

INPUT VOLTAGE RANGE: 105 to 125 VRMS

INPUT FREQUENCY RANGE: 380 to 420 Hertz, 1 phase

INPUT POWER: Per MIL-STD-704A for category B equipment

LINE REGULATION: 0.1% (0.2% for duals) or 10 mv (whichever is greater) for input change of 105 to 125 VRMS with load constant

LOAD REGULATION: 0.1% (0.2% for duals) or 20 mv (whichever is greater) for change from no load to full load with line constant

RIPPLE: 0.02% or 5 mv (whichever is greater) 25 mv peak-to-peak maximum, each output, measured with scope having 25 MHz bandwidth

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table by means of an externally accesible screwdriver adjustment potentiometer

TRACKING ACCURACY: The negative output will track the positive output to within 1.0% or 100 mv (whichever is greater) for all rated conditions of input voltage, output current, operating temperature, and output voltage adjustment

ISOLATION VOLTAGE: 750 vdc input to output and input to case • 200 vdc output to case

INSULATION RESISTANCE: 50 megohms minimum between input and output, input and case, and output and case when measured at 50 vdc

POLARITY: Inputs and outputs are isolated, either positive or negative side may be grounded

TEMPERATURE RANGE: Operating: −55° to +100°C maximum at center of mounting base
Storage: −65°C to +125°C

TEMPERATURE COEFFICIENT: 0.03% per degree Celsius maximum

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-STD-810B and MIL-E-5400K, Class 2, including: altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, explosion, etc.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed

INPUT TRANSIENT PROTECTION: MIL-STD-704A Figure 3, Limit 1 (180 VAC for 0.1 seconds)

OVERVOLTAGE PROTECTION: Overvoltage protection modules are available for these units.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 100 microseconds (200 microseconds for duals) after 50% step change in load current

ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation of and susceptability to radiated and conducted interference

RELIABILITY: The Mean Time Between Failure (MTBF) per MIL-HDBK-217 under worst case operating conditions of full rated output current, 125 vac input voltage, and +100°C base plate temperature, has been calculated for typical units. Values are: W5D10 — 56,148 hrs; W95D0.3 —47,393 hrs; WW3D0.3 — 67,385 hrs; WW30D4.0 — 48,618 hrs.

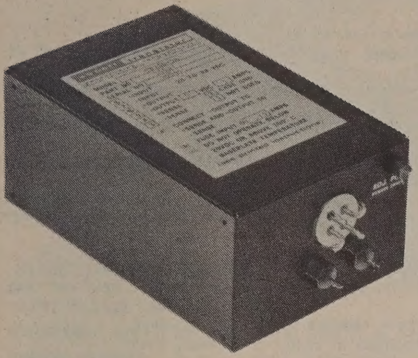
abbott transistor LABORATORIES, INCORPORATED

abbott 400 ∿ to DC Hi-Efficiency



features

- Up to 70% Efficiency
- +100°C Operation
- EMI to MIL-STD-461
- Hermetically Sealed
- Environment to MIL-STD-810
- Single and Dual Outputs

In order to meet the high efficiency requirements of many of today's airborne systems, Abbott engineers have designed and developed a new line of AC to DC power modules. Specifically designed for 400 Hz operation, these hermetically sealed units achieve power conversion efficiencies of up to 70%. We have designated this new line the Model UN series.

The UN's employ pulse width modulation at a switching frequency of 18 to 20 KHz. Three hermetically sealed linear IC's are used to provide stable and reliable control over the full temperature range of −55°C to +100°C.

The performance features of the UN's make them well suited for any application requiring reliable and rugged 400 Hz to DC conversion.

specifications

INPUT VOLTAGE RANGE: 115 Vrms ±10%

INPUT FREQUENCY RANGE: 380 to 420 Hz, 1ϕ

EFFICIENCY: Typical efficiency ranges from 53 to 70%

INRUSH CURRENT: Less than 8 times normal steady-state full load input current

LINE EFFECT (REGULATION): 0.3% for input change of 103.5 to 126.5 VAC RMS

LOAD EFFECT (REGULATION): 0.5% for load change of no load to full load

PARD (RIPPLE & NOISE): 100 mV peak-to-peak, 25 mV rms from +25°C to +100°C; 130 mV peak-to-peak, 40 mV rms from −55°C to +25°C. Measured at power module terminals with measurement system noise bandwidth of 25 MHz.

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown by means of an externally accessible screwdriver adjustment potentiometer

ADJUSTMENT RESOLUTION:

Nominal Output Voltage	Resolution
5-10 VDC	37 mV
12-18 VDC	49 mV
24-31 VDC	75 mV

ISOLATION VOLTAGE: 250 VDC between input and output and input and case; 50 VDC between ouput and case

INSULATION RESISTANCE: 50 megohms minimum between input and output, input and case and output and case when measured at 50 VDC

TEMPERATURE RANGE: Operating; −55°C to +100°C baseplate temperature. Derate maximum output current linearly above 85°C baseplate temperature to 80% of full load rating at 100°C baseplate temperature. Storage; −65°C to +125°C

TEMPERATURE EFFECT (COEFFICIENT): 0.03% per degree Celsius

ENVIRONMENT: Hermetically sealed and encapsulated to meet the environmental requirements of MIL-STD-810 and MIL-E-5400, Class 2, including altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, explosion, etc.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against overloads (greater than 150% rated load) and short circuits of any duration. The output automatically restores to normal when the fault is removed

INPUT TRANSIENT PROTECTION: In accordance with MIL-STD-704A, Figure 3, Limit 1 (180 VAC for 0.1 sec)

OVERVOLTAGE PROTECTION: Internal OVP is available as an optional feature and is indicated by adding "-1" to the model number (i.e. UN25D-5A-1 indicates that OVP has been included). The price is $20.00 additional on 1-4 pieces. The overvoltage threshold is factory set to approximately 2V or 10% (whichever is greater) above the nominal output voltage. The OVP circuitry has a built-in delay of approximately 500 microseconds to minimize 'nuisance' tripping

REMOTE ERROR SENSING: Each unit contains a means by which the regulator circuit can monitor the voltage directly at the load by using extra "sense" leads. The resulting circuit action will compensate for a DC voltage drop of up to 0.3 volts in the load leads

LOAD TRANSIENT RESPONSE: Output voltage returns to regulation limits within 2 ms after a 50% step change in load current. Maximum overshoot is less than 0.8V

TURN-ON/TURN-OFF OVERSHOOT: No overshoot during turn-on into loads greater than half load. For loads less than half load, turn-on overshoot is less than 0.8V for 25 ms. No turn-off overshoot under any conditions

OUTPUT IMPEDANCE:

DC-500 Hz: 0.02R_L or .04 ohm, whichever is greater
500-5 KHz: 0.10 R_L or .35 ohm, whichever is greater
5K-100 KHz: 0.30 R_L or .10 ohm, whichever is greater

ELECTROMAGNETIC INTERFERENCE: Designed to meet the requirements of MIL-STD-461A for generation of conducted and radiated interference. Test report on a typical model is available

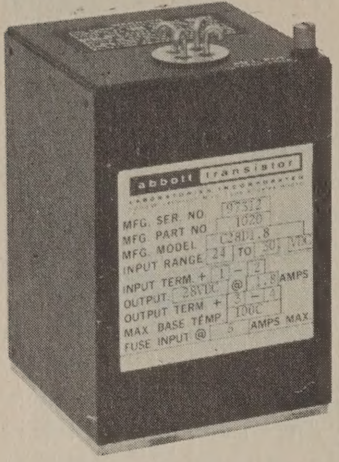
abbott transistor LABORATORIES, INCORPORATED

abbott 28 VDC to DC

Hi-Performance Single & Dual Output



features

- Low Peak-to-Peak Ripple
- RFI/EMI to MIL-STD-461
- Small
- Hermetically Sealed
- +100°C Operation
- 0.1% Regulation

specifications

INPUT VOLTAGE RANGE: 24 to 30 vdc. Other input ranges are available

LINE REGULATION: 0.1% (0.2% for duals) or 10 mv (whichever is greater) for input change of 24 to 30 vdc with load constant

LOAD REGULATION: 0.1% (0.2% for duals) or 20 mv (whichever is greater) for load change of no load to full load with line constant

RIPPLE: 0.02% or 5 mv RMS (whichever is greater) 50 mv peak-to-peak maximum, each output, measured with scope having a bandwidth of 25 MHz

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table by means of an externally accessible screwdriver adjustment potentiometer.

TRACKING ACCURACY: The negative output will track the positive output to within 1.0% or 100 mv (whichever is greater) for all rated conditions of input voltage, output current, operating temperature, and output voltage adjustment

ISOLATION VOLTAGE: 200 volts DC between input and output, input and case, and output and case.

INSULATION RESISTANCE: 50 megohms minimum at 50 volts DC between input and output, input and case, and output and case.

POLARITY: Inputs and outputs are isolated; either positive or negative side may be grounded.

TEMPERATURE RANGE: Operating: −55°C to +100°C maximum at center of mounting base.
Storage: −65°C to +125°C.

TEMPERATURE COEFFICIENT: 0.03% per degree Celsius maximum

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-STD-810B and MIL-E-5400K, Class 2, including altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, explosion, etc.

SHORT CIRCUIT PROTECTION
Each unit is completely protected against an overload or short circuit of any duration. The output voltage automatically restores to normal when the overload is removed.

INPUT TRANSIENT PROTECTION: MIL-STD-704A, Limit 1, Category B (80 volts for 0.1 sec.).

OVERVOLTAGE PROTECTION: Overvoltage protection modules are available for use with these units.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 100 microseconds (200 microseconds for duals) after 50% step change in load current

ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation of and susceptability to radiated and conducted interference.

RELIABILITY: The mean time between failure (MTFB) per MIL-HDBK-217 under worst case operating conditions of full rated output current, 30 vdc input voltage, and +100°C base plate temperature has been calculated for typical units. Values are: C5D10 — 41,305 hrs; C95D0.25 — 55,463 hrs; CC3D3.5 — 34,710 hrs; CC30D3.5 — 20,105 hrs.

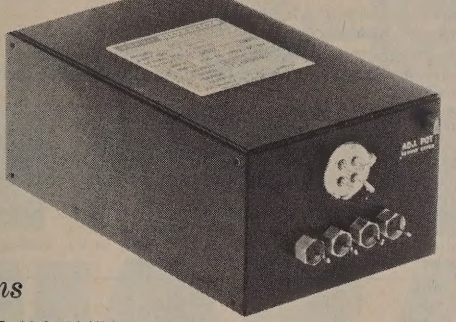
abbott DC to DC Hi-Efficiency



features

- Wide Range DC Input
- Up to 70% Efficiency
- EMI Filters
- Reverse Polarity Protection
- +100°C Operation
- Single & Dual Outputs

specifications

INPUT VOLTAGE RANGE: 20 to 32 VDC

EFFICIENCY: Typical efficiency ranges from 50 to 70%.

INRUSH CURRENT: Less than 8 times normal steady-state full load input current

LINE EFFECT (REGULATION): 0.5% for input change of 20 to 32 VDC

LOAD EFFECT (REGULATION): 0.5% for load change of no load to full load

PARD (RIPPLE & NOISE): 100 mv peak-to-peak, 25 mv rms from 25°C to +100°C; 130 mv peak-to-peak, 40 mv rms from −55°C to +25°C. Measured at power module terminals with measurement system noise bandwidth of 25 MHz

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown by means of an externally accessible screwdriver adjustment potentiometer. Wider output ranges are available by restricting the input voltage range. Consult the factory for further information

ADJUSTMENT RESOLUTION:

Nominal Output Voltage	Resolution
5-10 VDC	37 mv
12-18 VDC	49 mv
24-31 VDC	75 mv

ISOLATION VOLTAGE: 100 VDC between input & output and input & case; 50 VDC between output & case

INSULATION RESISTANCE: 50 megohms minimum between input & output, input & case and output & case when measured at 50 VDC

POLARITY: Inputs and outputs are isolated; either positive or negative side may be grounded.

TEMPERATURE RANGE: Operating; −55°C to +100°C baseplate temperature. Derate maximum output current linearly above 85°C baseplate temperature to 80% of full load rating at 100°C baseplate temperature. Storage; −65°C to +125°C

TEMPERATURE EFFECT (COEFFICIENT): 0.03% per degree Celsius

ENVIRONMENT: Hermetically sealed and encapsulated to meet the environmental requirements of MIL-STD-810 and MIL-E-5400, Class 2, including altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, explosion, etc.

* See Page 3168 for size charts.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against overloads (greater than 150% rated load) and short circuits of any duration. The output automatically restores to normal when the fault is removed

INPUT TRANSIENT PROTECTION: Each unit is completely protected against the transients of MIL-STD-704, Category B, (80 VDC for 0.1 sec) having rise times greater than 100 microseconds. Unit will turn off and resume operation when the input returns to normal

OVERVOLTAGE PROTECTION: Internal OVP is available as an optional feature and is indicated by adding "—1" to the model number (i.e.: BN25D-5A-1 indicates that OVP has been included.) The price is $20.00 additional on 1-4 pieces. The overvoltage threshold is factory set to approximately 2 V or 10% (whichever is greater) above the nominal output voltage. The OVP circuitry has a built-in delay of approximately 500 microseconds to minimize 'nuisance' tripping

REMOTE ERROR SENSING: Each unit contains a means by which the regulator circuit can monitor the voltage directly at the load by using extra "sense" leads. The resulting circuit action will compensate for a DC voltage drop of up to 0.3 volts in the load leads

LOAD TRANSIENT RESPONSE: Output voltage returns to regulation limits within 2 ms after a 50% step change in load current. Maximum overshoot is less than 0.8 V

TURN-ON/TURN-OFF OVERSHOOT: No overshoot during turn-on into loads greater than half load. For loads less than half load, turn-on overshoot is less than 0.8 V for 25 ms. No turn-off overshoot under any conditions

OUTPUT IMPEDANCE:

DC-500 Hz	0.02 R$_L$ or 0.04 ohms
500-5K Hz	0.10 R$_L$ or 0.35 ohms
5K-100K Hz	0.30 R$_L$ or 0.10 ohms

ELECTROMAGNETIC INTERFERENCE: Designed to meet the requirements of MIL-STD-461 for generation of conducted and radiated interference. Test report on a typical model is available

RELIABILITY: The Mean Time Between Failures (MTBF) per MIL-HDBK-217A under worst case operating conditions of 32 VDC input, full load output, and 100°C baseplate temperature was calculated to be 13,950 hours for Model BN100D-5A. At 71°C baseplate temperature, the MTBF increases to 23,000 hours

Output Voltage Range	Output Current (Amps)	Size*	Weight (Lbs.)	Model Number	Price 1-4 pcs.

	3.33	12F	4.4	BBN100D-15A	498

Dual Output Units: 1) The output current listed is for each output.

2) The negative output is "semiregulated" and will meet regulation specifications only when operated into a balanced load.

3) The negative output will typically be within 4% of the positive output voltage for load imbalances up to 4:1 in magnitude.

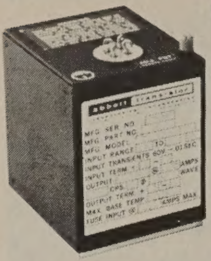
abbott DC to Sine Wave ∿1 ϕ



DC to 400 Hz

POWER MODULES

features

- Close regulation
- 400 or 1600 Hertz
- Hermetically sealed
- No moving parts
- Compact

specifications

Input Voltage Range: 24 to 30 volts DC. Other input ranges are available.
Load Regulation: ±0.5% from ½ to full load.
Frequency Stability: ±0.5%
Voltage Adjustment Range: 12% by screwdriver adjustment.
Reliability: 55,000 hours MTBF typical per MIL-HDBK-217 under worst case operation conditions.
Input Transient Protection: In accordance with MIL-STD-704A, Limit 1, Category B (80 volts for 0.1 seconds).
Environment: +212°F max. at mtg. base using adequate heat sink. −65°F min. at mtg. surface. Altitude: To vacuum (true hermetic seal). Vibration, shock, sand, dust, humidity, salt spray, fungus, sunshine, rain, and explosion to MIL-STD-810B and MIL-E-5400K.
Output Voltage, Current, and Frequency: See specific models listed (Outputs and inputs are isolated).
Output freqencies up to 1600 Hz are listed in our catalog as standard models. Contact our nearest office for your free copy.

A C to D C POWER MODULE

ALL MODELS U.L. RECOGNIZED

Conserve space with mini-modules as small as 2.3″ x 1.8″ x 1.0″. Models with outputs ranging from 1 to 75 volts, and from 30 ma to 2.5 amps are available. All feature excellent regulation and ripple parameters, and are short circuit protected. Rugged encapsulated construction and generously derated components insure years of reliable operation. Mini-modules are also available with multiple outputs—see pages 4 and 5.

STANDARD FEATURES

- May be used in series
- No derating or heat sinking required
- Short circuit protected
- Small, lightweight

SPECIFICATIONS

Input Voltage: 105–125 VAC, 47 to 420 Hz, single phase.

Output Specifications: See table.

Output Voltage Trim Adjustment: Output is factory preset to ±2% (1 to 9 volt models) or ±1% (10 to 75 volt models) of nominal output voltage. Output may be trimmed to the nominal voltage rating with an external trim resistor.

Polarity: Output is floating. Either positive or negative terminal may be grounded.

Ambient Operating Temperature: −20 to +71°C. (Model 5E150, 0 to +71°C.) No derating required.

Storage Temperature: −55 to +85°C.

Temperature Coefficient: From 9 to 75 volts, approximate TC is .015%/°C; 1 to 8 volts, .03%/°C.

Impedance: 0.07 ohms at 1 kHz and 0.2 ohms at 10 kHz (approx.).

Weight:	7 oz. (Case size ES-10.)
	1 lb. (Case size EL-10.)
	1 lb. 3 oz. (Case size EL-13.)
	2 lb. (Case size EL-20.)

Optional 230 Volt Input: All models can be alternately furnished for operation on an input of 210 to 250 VAC, 47-420 Hz. To order, add suffix "−230" to model number and $10.00 to price.

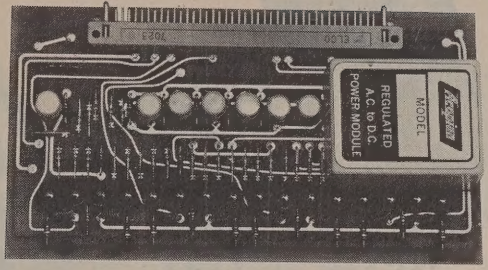
High voltage displays such as NIXIE* indicators may be powered with the Model NX-25A or NX-50. With an input of 115 VAC 47-420 Hz, they provide nominal (unregulated) outputs of 185 VDC.

*Registered trademark of Burroughs Corp.



Placement of a mini-module on a printed circuit assembly eliminates the need for an outboard power supply, as well as all the associated wiring, connectors and hardware. Layout and construction are simplified, equipment size can be reduced, and system reliability is improved.

MODEL
DUAL OUTPUT REGULATED
POWER SUPPLY

MINIATURIZED REGULATED MULTIPLE OUTPUT

ALL MODELS U.L. RECOGNIZED

These dual and triple output mini-modules are compact and convenient sources of the voltages required to power operational amplifiers and related circuits. They may be mounted directly on printed circuit board assemblies, simplifying system layout and minimizing the connectors and wiring required.

STANDARD FEATURES

- May be used in series
- No derating or heat sinking required
- Short circuit protected
- Compact, lightweight

SPECIFICATIONS

Input Voltage: 105–125 VAC, 47 to 420 Hz, single phase.

Output Specifications: See table.

Output Voltage Setting: Each output is factory preset to ±2% (1 to 9 volt outputs) or ±1% (10 to 28 volt outputs) of the nominal output voltage. Outputs of Case Size END modules, except those marked (*), may be trimmed to the nominal voltage rating with an external trim resistor.

Polarity: Single output sections may be used in either polarity. Dual output sections, marked (*), are provided with a plus/common/minus output connection configuration.

Ambient Operating Temperature: −20 to +71°C. No derating required.

Storage Temperature: −55 to +85°C.

Temperature Coefficient: From 9 to 28 volts, approximate TC is .015%/°C; 1 to 8 volts, .03%/°C.

Impedance: 0.07 ohms at 1 kHz and 0.2 ohms at 10 kHz (approx.).

Weight: 7 oz. (Case size ES-10.)
13 oz. (Case size END.)
1 lb. (Case size EL-10.)
1 lb. 3 oz. (Case size EL-13.)
2 lb. (Case size EL-20.)

Optional 230 Volt Input: All models can be alternately furnished for operation on an input of 210 to 250 VAC, 47-420 Hz. To order, add suffix "−230" to model number and $10.00 to price.

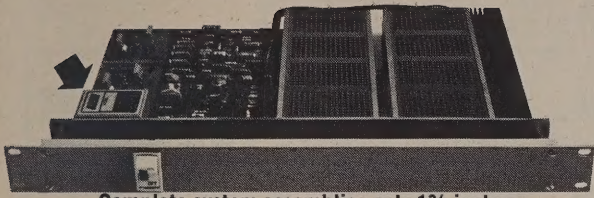
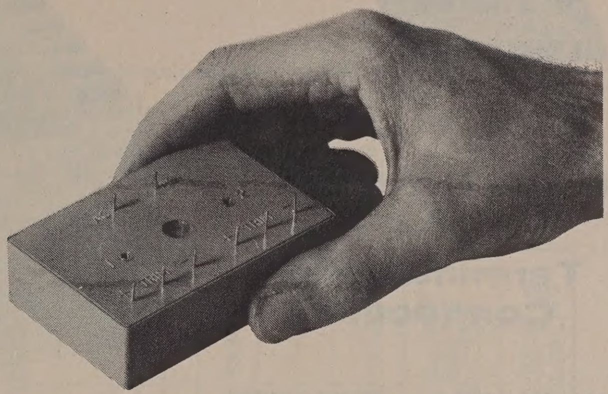
4 *ACOPIAN CORP., EASTON, PA. 18042 • TEL: (215) 258-5441 • TWX: (510) 651-4919 • 3-DAY SHIPMENT GUARANTEED*



Complete system assemblies only 1¾-inches high. Mini-modules permit exceptional flexibility in the design of rack-mounting assemblies built on standard 19-inch panels as small as 1¾-inches high.



Dual output modules have isolated outputs; triples provide two balanced and tracking voltages in a three-terminal configuration, plus an isolated third output for logic, control circuits, etc.

HOW TO ORDER:

Any two of the sections listed below, or two of the same section, can be combined into a multiple-output module. The complete model number is the combination of the two section numbers selected. Note that some sections provide two outputs; combination with a single output section results in a triple-output module.

Example: The combination of sections 6E20D and 15E10D is the Model 6E20D-15E10D. Always assign the lower voltage section first. For pricing purposes, add the costs of the sections selected. Example: The price of the Model 6E20D-15E10D is $39.00 plus $29.00, or $68.00 total.

MINIATURIZED REGULATED

Terminal Strip Connections

ALL MODELS U.L. RECOGNIZED

Although small in size, these mini-modules offer high performance at modest prices. All models, with series regulated outputs ranging from 1 to 75 volts and as high as 2.5 amps, may be mounted in an area only 3.5″ x 2.5″. Dual output models are available with the ratings commonly required for driving op amps and other balanced loads. Terminal strip input/output connections eliminate all need for sockets or soldering. Short circuit protection, encapsulated construction, and conservative design assure long term reliability.

STANDARD FEATURES

- May be used in series
- No derating or heat sinking required
- Short circuit protected
- Small, lightweight

SPECIFICATIONS

Input Voltage: 105–125 VAC, 47 to 420 Hz, single phase.

Output Specifications: See tables.

Output Voltage Trim Adjustment: Outputs factory preset to ±2% (1 to 9 volt models) or ±1% (10 to 75 volt models) of nominal output voltage. Single output models may be trimmed to the nominal voltage rating with an external trim resistor.

Polarity: Either positive or negative terminal of a single output module may be grounded. Dual output modules have a positive/common/negative output terminal configuration.

Ambient Operating Temperature: −20 to +71°C. (Model 5EB150, 0 to +71°C.) No derating required.

Storage Temperature: −55 to +85°C.

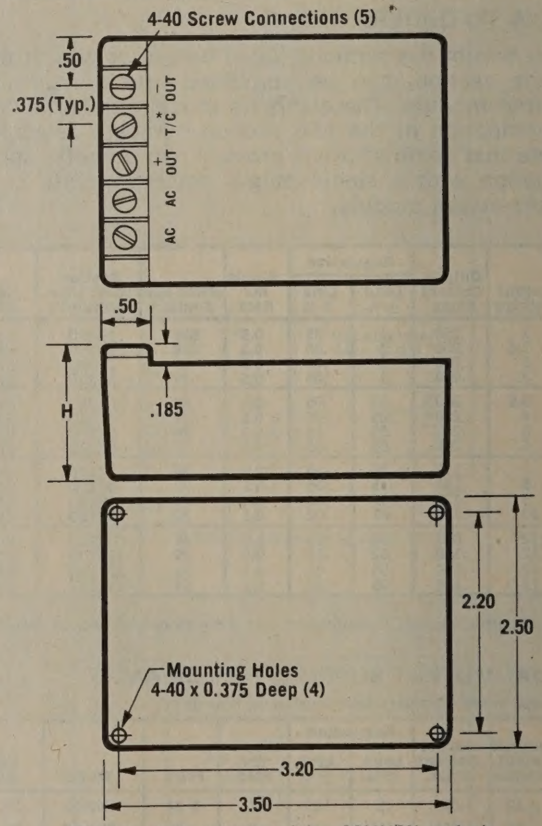
Temperature Coefficient: From 9 to 75 volts, approximate TC is .015%/°C; 1 to 8 volts, .03%/°C.

Impedance: 0.07 ohms at 1 kHz and 0.2 ohms at 10 kHz (approx.).

Optional 230 Volt Input: All models can be alternately furnished for operation on an input of 210 to 250 VAC, 47-420 Hz. To order, add suffix "–230" to model number and $10.00 to price.

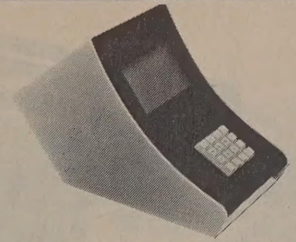
High voltage displays such as NIXIE* indicators may be powered with the Model NX-25B or NX-50B. With an input of 115 VAC 47-420 Hz, they provide nominal (unregulated) outputs of 185 VDC.

*Registered trademark of Burroughs Corp.



*TRIM on single output modules; COMMON on duals

Case	H	Approx. Weight
EB-10	1.375	15oz
EB-13	1.625	1lb 5oz
EB-20	2.375	2lb 1oz



An Acopian miniaturized power module is used in the Valitron credit validation system manufactured by Video Systems Corporation. A Valitron terminal is capable of retrieving and displaying credit information for any of 100,000 accounts on a six inch video screen, in response to an account number being entered via its keyboard.

ALL MODELS U.L. RECOGNIZED

A broad selection of power supplies offering unusually high performance — many models have regulation of ±0.005%. Electronic current limiting and provision for remote voltage sensing are standard features; overvoltage protection is available as a built-in option. Rugged extruded aluminum cases include threaded mounting holes on bottom, back, and side, permitting mounting in any position.

SERIES A PREMIUM PERFORMANCE POWER SUPPLIES

STANDARD FEATURES

- Provision for remote sensing and/or external output adjustment
- Short circuit proof with automatic recovery (electronic current limiting)
- Can be mounted on any of three surfaces (case sizes H11 and H16, two surfaces)
- Convection cooled — no heat sinking or forced-air ventilation is necessary
- Silicon semiconductors
- Completely serviceable

SPECIFICATIONS

Input Voltage: 105–125 VAC, 50–400 Hz, single phase.

Output Specifications: See pages 10 and 11. Series A supplies have model numbers beginning with the letter A.

Remote Voltage Sensing: Provision for sensing the output voltage across the load, so that drops in the load line are compensated, is a standard feature.

Polarity: Output is floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Ambient Operating Temperature: −20 to +71°C.

Storage Temperature: −55 to +85°C.

Response Time: Less than 20 microseconds.

OPTIONS

Overvoltage Protection: An internal preset overvoltage protector is available on all models. To order, add prefix "V" to the model number, and increase standard price as follows:

For all case sizes except H16:	
Nominal output voltages from 3 to 28 V.	$25.00
30 to 70 V.	35.00
Case size H16 (all voltages)	75.00

REGULATED POWER SUPPLY
+ OUT SENS − OUT AC AC GND

These low-cost supplies provide the same high reliability as the Series A, and without sacrificing the basic features necessary for most applications. Many models have regulation of ±0.1% or better. All components are generously derated to insure a long and trouble-free life. And they use the same rugged construction as the Series A line. Overvoltage protection and other options are available.

SERIES B LOW-COST POWER SUPPLIES

STANDARD FEATURES

- Delivers current surges without damage — built-in fuse protects supply against prolonged overloads and shorts
- May be mounted on any of three surfaces
- Convection cooled — no heat sinking or forced-air ventilation is necessary
- Silicon semiconductors
- Completely serviceable

SPECIFICATIONS

Input Voltage: 105–125 VAC, 50–400 Hz, single phase.

Output Specifications: See pages 10 and 11. Series B supplies have model numbers beginning with the letter B.

Remote Voltage Adjustment/Sensing: Available as an option. See below.

Polarity: Output is floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Ambient Operating Temperature: 0 to +71°C.

Storage Temperature: −55 to +85°C.

OPTIONS

Overvoltage Protection: An internal preset overvoltage protector is available on all models up to 70 V. To order, add prefix "V" to the model number and add $25.00 to the standard price of models with output voltages of 3 to 28 V, $35.00 to the price of models with output voltages from 30 to 70 V.

Remote Voltage Sensing: Provision for sensing the output voltage across the load, so that drops in the load lines are compensated, is available on all models. (This option also permits the use of an externally located potentiometer to adjust output voltage.) To order, add prefix "R" to the model number. No increase in price.

NARROW PROFILE REGULATED

ALL MODELS U.L. RECOGNIZED

Where only a narrow mounting space is available, Acopian narrow profile power supplies fit when many others cannot. Choose from Series A (high performance) and Series B (lower priced) models with output ratings up to 150 volts, up to 4 amps.

SPECIFICATIONS

Input Voltage: 105–125 VAC, 50–400 Hz, single phase.

Output Specifications: See table. Series A supplies have model numbers beginning with the letter A; Series B, with the letter B.

Remote Voltage Adjustment/Sensing: Standard in Series A, not available in Series B.

Polarity: Output is floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Ambient Operating Temperature: Series A, −20 to +71°C; Series B, 0 to 71°C.

Storage Temperature: −55 to +85°C.

Short Circuit and Overload Protection: Series A, electronic current limiting with automatic recovery; Series B, fused — delivers current surges without damage.

OPTIONS

Overvoltage Protection: An internal preset overvoltage protector is available on all models up to 70 V. To order, add prefix "V" to the model number and add $25.00 to the standard price of models with output voltages of 3 to 28 V, $35.00 to the price of models with output voltages from 30 to 70 V.

230 Volt Input: Available on some models. Contact factory for information.

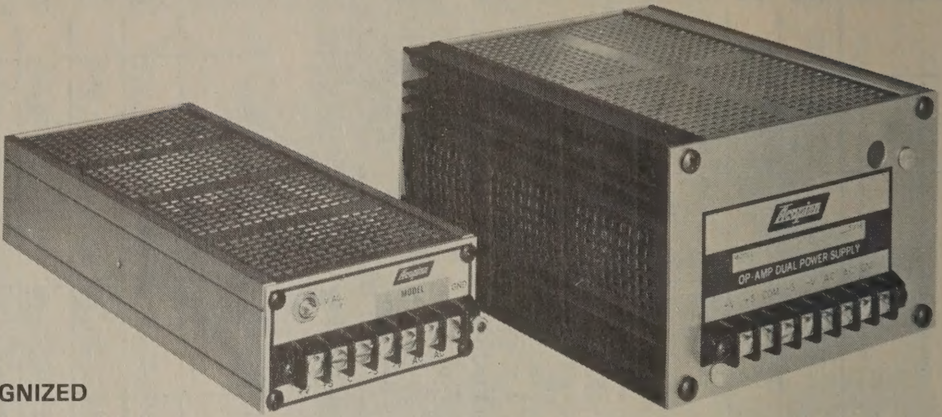
DUAL OUTPUT For Op Amps.



ALL MODELS U.L. RECOGNIZED

Series D dual output power supplies are a convenient source of the tracking voltages required for powering operational amplifiers and related circuits. Their positive/common/negative output terminal configuration minimizes system wiring. Provision for remote sensing permits compensation of load line effects. Although moderately priced, they are sturdily constructed and conservatively rated.

SPECIFICATIONS

Input Voltage: 105–125 VAC, 50–400 Hz, single phase.

Output Voltages: Tracking within 1%.
Output Currents:
Output Voltage Adjustment Ranges:
See tables. Outputs are short circuit protected.

Load Regulation: ±0.1%.

Line Regulation: ±0.1%.

Ripple: 1.5 mv RMS.

Polarity: Positive output, common, and negative output.

Remote Voltage Sensing: Standard.

Ambient Operating Temperature: −10 to +71°C.

Storage Temperature: −55 to +85°C.

OPTIONS

Overvoltage Protection: A built-in preset overvoltage protection circuit is available on all models. If either output fails, both outputs are "crowbarred." To order, add prefix "V" to the model number, and increase standard price by $30.00.

230 Volt Input: All models can be alternately furnished for operation on inputs of 210–250 VAC, 50–400 Hz. To order, add suffix "-230" to model number and $10.00 to price.

ALL MODELS U.L. RECOGNIZED

Acopian general purpose duals furnish two completely independent outputs, either identical or different, in less space and at less cost than two equivalent single output supplies. Thousands of output voltage/current rating combinations are available. Mounting and system wiring are simplified. Quality components, generously derated, insure long-term reliability.

STANDARD FEATURES

- A broad selection of output combinations
- May be mounted on any of three surfaces
- Delivers current surges without damage—built-in fuse protects supply against prolonged overloads and shorts
- Silicon semiconductors
- Rugged construction

HOW TO ORDER: Select the two sections desired. The complete model number is the combination of the two sections selected. Example: The combination of section 5GT20D and section 8GT50D is Model 5GT20D-8GT50D. Always assign the lower voltage section first. For pricing purposes, add the cost of the individual sections selected. Example: The price of Model 5GT20D-8GT50D is $60.00 plus $65.00, or $125.00 total.

SPECIFICATIONS

Input Voltage: 105–125 VAC, 50–400 Hz, single phase.

Output Specifications: See pages 16 and 17. No derating required through ambient temperature range of −10 to +71°C.

Polarity: Outputs are floating. Each output may be independently connected to provide any combination of positive and negative voltages. Outputs may be floated up to 300 V above ground.

Ambient Operating Temperature: −10 to +71°C.

Storage Temperature: −55 to +85°C.

Dimensions and Weight: Case size G5D.

Optional 230 Volt Input: All models can be alternately furnished for operation on inputs of 210–250 VAC, 50–400 Hz. To order, add suffix "-230" to the model number, and $10.00 to the standard price.

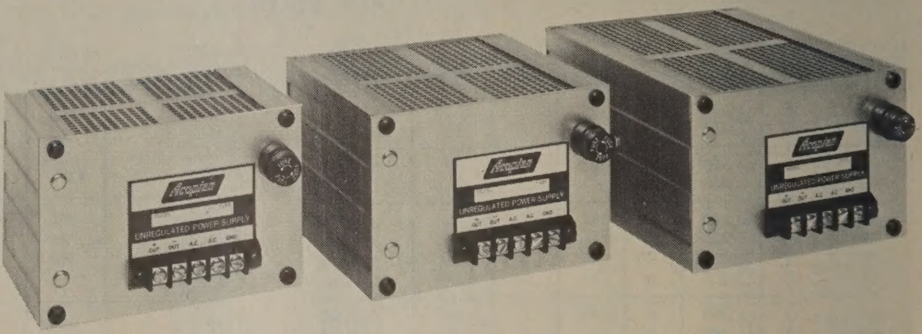
SERIES U UNREGULATED



U.L. RECOGNIZED

Low-cost DC power suitable for driving loads such as lamps, relays, and small motors is provided by Series U unregulated power supplies. All components are generously derated, insuring a long and trouble-free life; built-in fusing prevents damage due to prolonged overloading or short circuits. Mechanically similar to the regulated supplies shown on pages 8 and 9, they are housed in extruded aluminum cases which can be mounted in any position.

STANDARD FEATURES

- Silicon rectifiers
- Capacitive filtering
- Fused input
- May be used in series or parallel
- No derating or heat sinking required
- Completely serviceable

SPECIFICATIONS

Input Voltage: 0–125 VAC, 50–400 Hz, single phase.

Output Voltage:
Output Current: } See table
Ripple:

Load Regulation: Nominal output voltage is based on 115 VAC input, with approximately 50% of rated output current being drawn.

Line Regulation: With fixed load, output voltage change is proportional to input voltage change.

Output Voltage Adjustment: An adjustable autotransformer (not included) may be used to adjust output voltage by varying the AC input voltage to the supply.

Polarity: Output is floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Ambient Operating Temperature: −10 to +65°C. No derating required.

Storage Temperature: −55 to +85°C.

Optional 230 Volt Input
Provision for inputs of 210–250 VAC, 50–400 Hz, replacing the standard 105–125 VAC input voltage range, is available on all models except those having an output current rating of 20 ma. To order, add the suffix "-230" to the model number, and $10.00 to the standard price.

The cross-sectional dimensions of Series U power supplies permit efficient rear mounting on either 3½″ or 5¼″ rack assemblies. Threaded holes on three surfaces permit mounting in any position. See page 22.

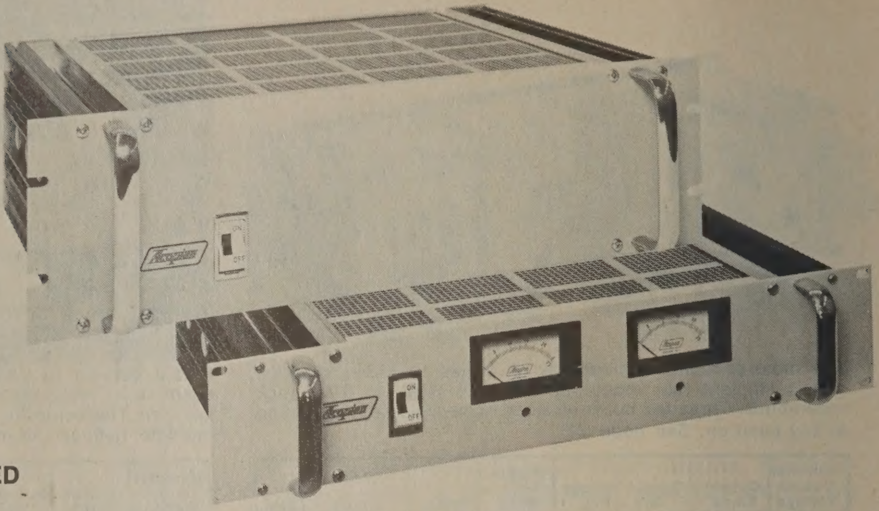
Acopian



RACK MOUNTING

Up to 50 Volts
Up to 60 Amps

ALL MODELS U.L. RECOGNIZED

Acopian rack-mounting power supplies feature excellent regulation and ripple specifications in 76 models with outputs up to 50 volts and 60 amps. Metering and overvoltage protection are available as options. These power supplies are constructed in sturdy extruded aluminum assemblies designed expressly for mounting in standard 19″ wide RETMA cabinet racks. The front panels are finished in light gray enamel; sides are black; the remaining casework is finished in gold alodyne.

STANDARD FEATURES

- Excellent line and load regulation, low noise
- Convection cooled
- Silicon semiconductors for maximum reliability
- Short circuit proof
- Attractively finished in light gray enamel and gold alodyne

SPECIFICATIONS

Input Voltage: 105–125 VAC, 50–400 Hz, single phase.

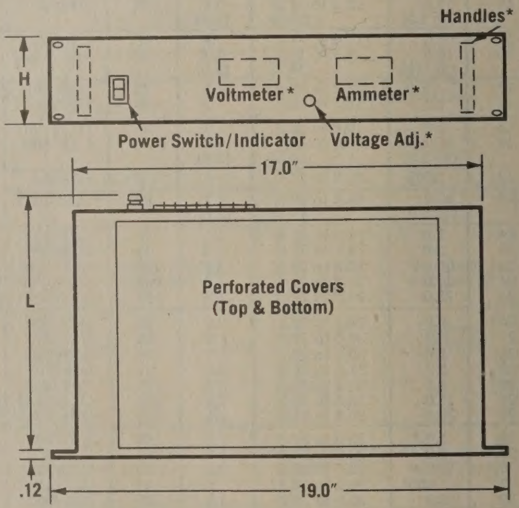
Output Voltage/Current:
Line Regulation:
Load Regulation:
Ripple:
Output Voltage Adjustment Range:
} See table.

Polarity: Output is floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Storage Temperature: −55 to +85°C.

Ambient Operating Temperature: −20 to +55°C.

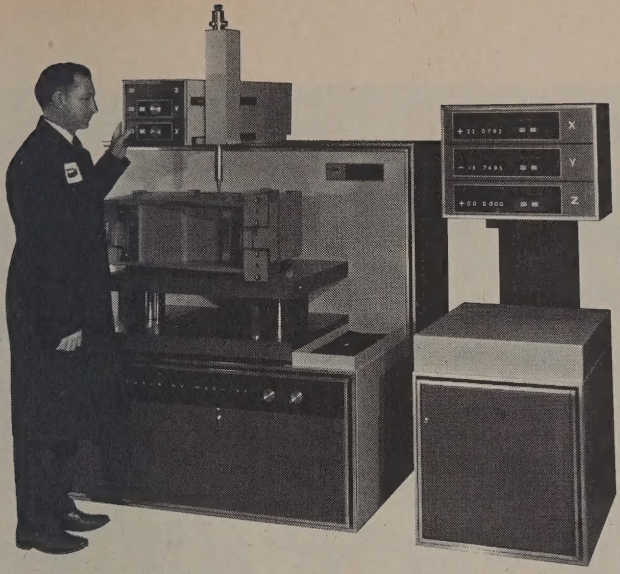
Protection: Short circuit. Overvoltage protection optional; see "Options."



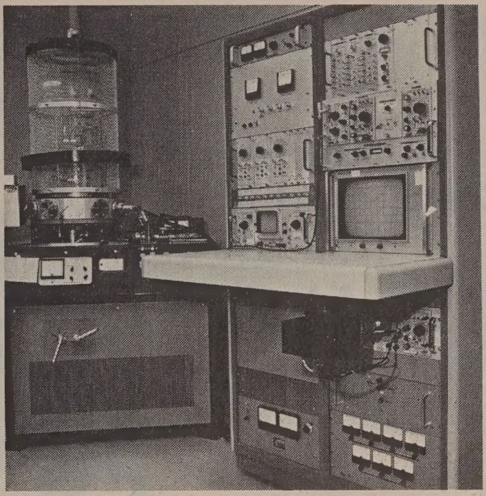
*Optional

Size	H	L	Approx. Weight
3P11	3½	11.0	22lb
5P12	5¼	12.0	28lb
5P17	5¼	17.0	43lb

ACOPIAN CORP., EASTON, PA. 18042 • TEL: (215) 258-5441 • TWX: (510) 651-4919



The Bendix Corp. eliminated the coupling of AC into the low level circuitry of this Cordax three-axis measurement system by using Acopian DC-output supplies for powering electromechanical components.



Sandia Laboratories uses Acopian power supplies in test equipment. Shown above is a Sandia electron beam nondestructive dielectric strength tester which is used to evaluate ceramic materials.

OPTIONS

Overvoltage Protection: An internally installed and preset overvoltage protector is available for all models. To order, add the prefix "V" to the model number and $25.00 to the price of models with an output current rating of 20 amps or less (at 40°C); add $75.00 to the price of higher current models.

Front Panel Voltage Adjustment: Standard models have a voltage adjustment located at the rear. A voltage control mounted on the front panel is available as an option. To order, add suffix "P" to the model number and $5.00 to price.

Voltmeter: Add suffix "F" to model number and $15.00 to price.

Ammeter: Add suffix "A" to model number and $15.00 to price.

230 Volt Input: Add suffix "-230" to model number and $10.00 to price.

Handles: Add suffix "H" to model number and $10.00 to price.

EXAMPLE: The Model 5PT20 equipped with all options is designated as the Model V5PT20AFHP-230. (List suffix letters in alphabetical sequence.)

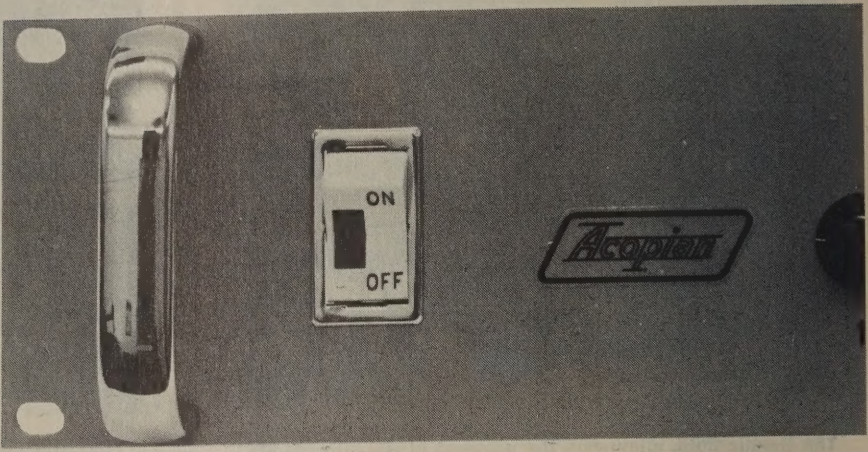
MULTIPLE-OUTPUT POWER SUPPLY SYSTEMS

shipped in only

9 days



Now you can fill your requirements for completely wired multiple-output rack-mounting power supply systems, without any need to search through a catalog and prepare time-consuming mechanical layouts, item-by-item pricing and detailed purchase requisitions. Instead, simply call the Acopian "hotline" and specify the output voltages and currents that you require.

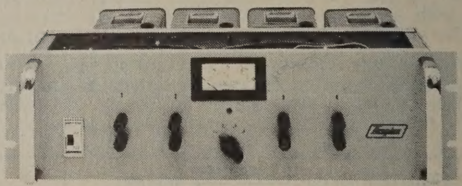
Acopian power systems offer the features that are most often required, and at reasonable cost. Each system is designed and constructed to provide an optimum mechanical and wiring configuration for the complement of power modules necessary to deliver the outputs specified. Acopian production expertise assures shipment of each system, completely wired and 100% tested, within 9 days after your order is received.

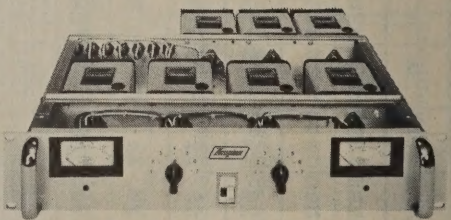
Ordering an Acopian power system is this easy:
List the DC outputs that you require. (Or, select the power modules that you wish to be included.) Note the system features which you consider necessary. Then, call the "Power Systems Hotline" collect at (215) 258-5441 and ask for the POWER SYSTEM DEPARTMENT.

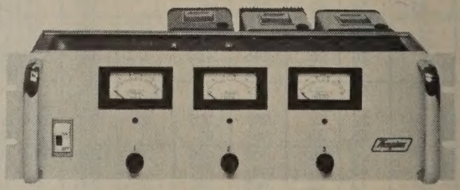
An Acopian Applications Engineer will answer—on the phone—any questions which you may have. A distinctive system model number will be assigned, and a firm price will be quoted. Your completely-wired power supply system will be shipped within 9 days.

System Description
Any of the power modules listed in this catalog can be included in a power system. The rack assembly will be designed and wired in a manner optimum for the complement of modules included.

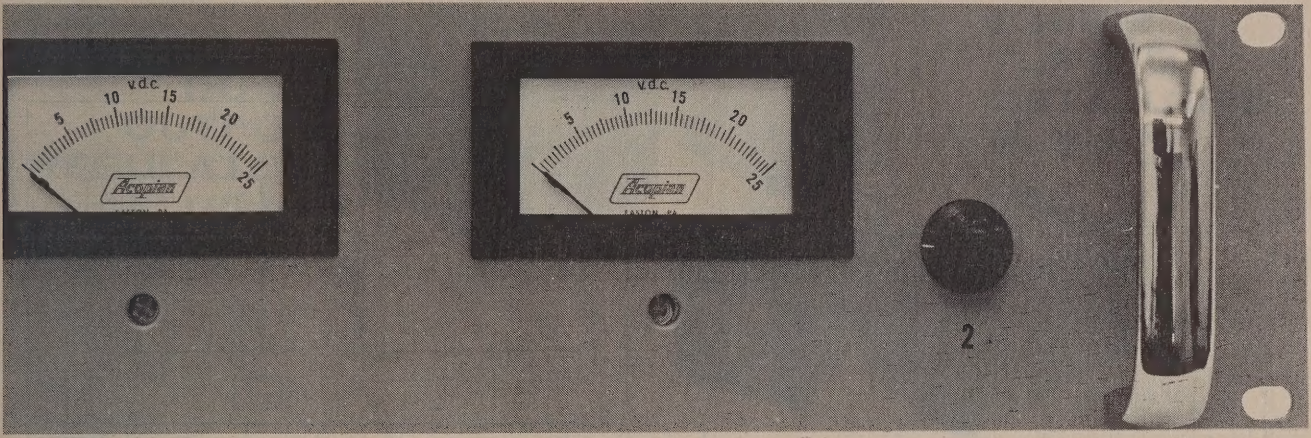
TYPICAL BUILT-TO-ORDER POWER SUPPLY SYSTEMS







ACOPIAN CORP., EASTON, PA. 18042 • TEL: (215) 258-5441 • TWX: (510) 651-4919



Now you can design your power system on the phone . . . just call Acopian.

Pricing of assemblies equipped with plug-in type power modules is calculated as indicated below, and includes wiring, all necessary fuses, power switch/indicator on front panel, and all input and output connections via terminal strip(s) at the rear. When rear panel space is insufficient for terminal strips, a connector may alternately be furnished. Minimum price, $150.00.

To obtain pricing information for assemblies containing other than plug-in type modules, contact factory.

Panel height (19″ wide)	Price (not including plug-in power modules)
3½″	$20.00 plus $5.00 per output
5¼″	$25.00 plus $5.00 per output
7″	$30.00 plus $5.00 per output
8¾″	$35.00 plus $5.00 per output
10½″	$40.00 plus $5.00 per output

Description

The standard front panel is ⅛-inch aluminum finished in light gray baked enamel. Also available, at no additional cost, are Emcor or Amco gray formed steel panels. (The panel can also be supplied in any other color conventional type enamel supplied by customer, at an additional charge of $10 per purchase order.)

The rear portion of the assembly is normally constructed from extruded aluminum panels, alodyne finished.

Accessories and Options

Voltmeters and/or ammeters – $15.00 each.

Front panel voltage adjustments – $5.00 each.

Front panel handles – $10.00/pair.

Chassis slides – $50.00/pair.

Other features and accessories

Should you require any non-standard features, call the Acopian "hotline" at Area Code 215, 258-5441 and discuss your needs with an Acopian Application Engineer. A procurement charge of $25.00 minimum (exclusive of material) will apply if components not stocked by Acopian are specified. Engineering charges to cover special layout and wiring may also apply. Extra charges are minimized and delivery accelerated when the customer provides any special components which he wishes to be incorporated into a power system.

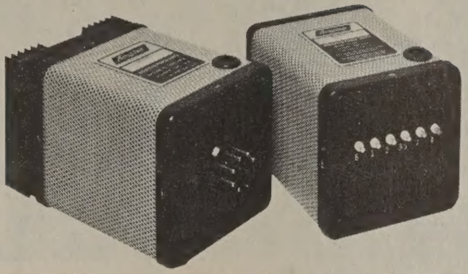
Redundant outputs — For applications where extreme reliability is a critical consideration, as in data communications and process controls, the use of redundant output power systems is recommended. Two power modules are included for each output and interwired in a manner permitting one to continue furnishing the required output should the other fail. See pages 24-25 for further information, or call the "Power Systems Hotline," (215) 258-5441.

Delivery — Shipment of your completely-wired power supply system will be made nine days after receipt of order. Of course, the famous Acopian three-day shipping guarantee on any of 82,000 different individual power modules remains unchanged.

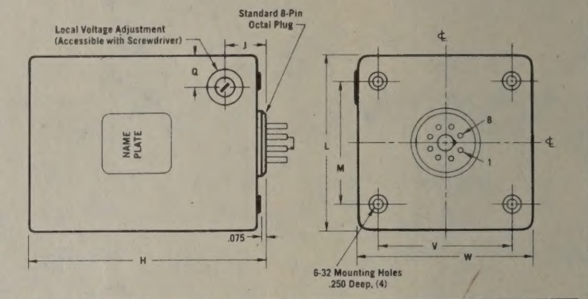
Guarantee—Acopian Corp. warrants each power supply system to be free from defects in material and workmanship for a period of five years from date of delivery.

Acopian

SINGLE OUTPUT REGULATED PLUG-IN



An Acopian plug-in power module can be installed in a matter of seconds. Simply plug it into an octal socket. You don't even have to screw it down (although threaded holes are provided) unless it is to be mounted in other than a vertical position, or will be subjected to shock or vibration.



Size	L	W	H	M	V	J	Q	Approx. Weight

Standard models are available for any voltage from 1 to 200. For information on those not listed, contact factory.

SPECIFICATIONS

Input Voltage: 105-125 VAC, 50-400 Hz, single phase.

Polarity: Output floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Ambient operating temperature: −10 to +65°C. No derating required.

MIL Tested/Increased Temperature Range: Contact factory for specific information.

Storage Temperature: −55 to +85°C.

Installation: Plugs into standard octal socket. Mounting holes (6-32) provided at each corner for installation in any position.

OPTIONS

Solder Terminals: All models can be furnished with solder terminals instead of the octal-type plug. To order, add suffix "L" to model number and $5.00 to price.

Remote Output Adjustment: All models have a local voltage adjustment. When provision for remote (external) adjustment is also desired, add prefix "E" to model number. No increase in price.

Remote Sensing: Provision for remote sensing of the output voltage to compensate for drops in the load lines can be furnished at an additional charge of $10.00 per unit. Add prefix "R" to model number when ordering. "R" power supplies have a local voltage adjustment and provision for remote (external) output adjustment.

230 Volt Input: All models can be alternately furnished for operation on inputs of 210 to 250 VAC, 50-400 Hz. Add suffix "–230" to model number and $10.00 to price.

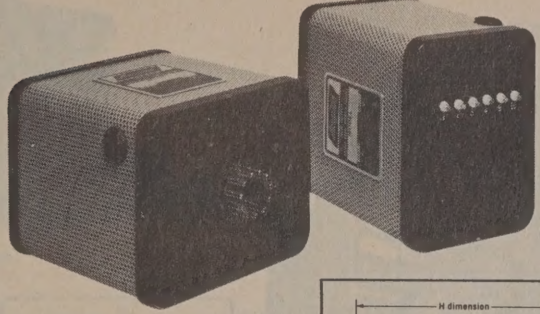
Acopian

DUAL OUTPUT REGULATED PLUG-IN



Space-saving Acopian duals combine two electrically independent DC outputs in a single case. Either identical or different outputs may be selected. And with a choice of more than 300 output ratings, over 10,000 combinations can be supplied . . . each with Acopian's usual 3-day shipment guarantee.

SPECIFICATIONS

Input Voltage: 105-125 VAC, 50-400 Hz, single phase.

Output Adjustment Range: ±1 volt.

Polarity: Outputs are floating. Each section may be independently connected to provide any combination of positive and negative outputs.

Short Circuit Protection: Delivers current surges without damage—to protect against prolonged overloads and shorts, use of an input fuse is recommended.

Ambient operating temperature: −10 to +65°C. No derating required.

MIL Tested/Increased Temperature Range: Contact factory for specific information.

Storage Temperature: −55 to +85°C.

HOW TO ORDER

Select the two sections desired. The complete model number is the combination of the two sections selected. Example: The combination of section 6J20D and section 12L40D is Model 6J20D-12L40D. Always assign the lower voltage section first. Where the indicated case sizes for the two sections differ, the larger case size applies.

For pricing purposes, add the cost of the individual sections selected.

OPTIONS

Solder Terminals: All models can be furnished with solder terminals instead of the 11-pin plug. To order, add suffix "L" to model number and $5.00 to price.

Remote Output Adjustment: All models have local voltage adjustments. When provision for remote (external) adjustments is also desired, add prefix "E" to model number.

Remote Sensing: Provision for remote sensing of the output voltages, to compensate for drops in the load lines, can be furnished at an additional charge of $20.00 per unit. Add prefix "R" to model number when ordering.

230 Volt Input: All models can be alternately furnished for operation on inputs of 210 to 250 VAC, 50-400 Hz. Add suffix "−230" to model number and $10.00 to price.

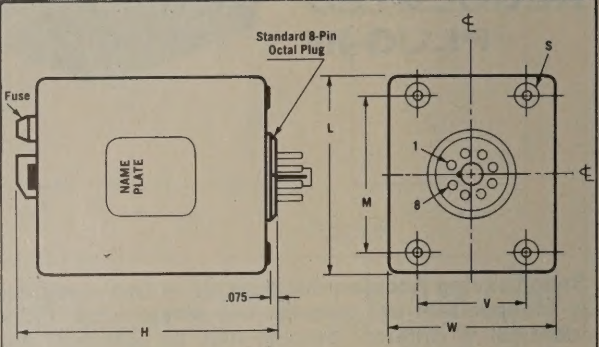
Acopian

UNREGULATED PLUG-IN FOR RELAYS, LAMPS AND NIXIE TUBES



Size	L	W	H	M	V	S	Approx. Weight
G	3.40	3.28	5.0	2.625	2.625	Four 6–32 x ¼″ deep mounting holes	2lb 8oz
K	4.15	3.33	5.2	2.750	2.562	Four 6–32 x ¼″ deep mounting holes	2lb 14oz
Q	4.15	3.33	7.0	2.750	2.562	Four 10–32 x ½″ long mounting studs	7lb

These low-cost, yet highly reliable unregulated power supplies have been specially designed to power DC relays, lamps and NIXIE tubes. Each has husky silicon rectifiers and a fused input to insure long and trouble-free operation. Installation consists of simply plugging the unit into a standard octal socket.

SPECIFICATIONS

Input Voltage: 0-125 VAC, 50-400 Hz, single phase.

Output Voltage:
Output Current: } See table.
Ripple:

Load Regulation: Nominal voltage is based on 115 VAC input with approximately one-half load. At no load, the output voltage will increase by approximately 10%. At full load, the output voltage will be reduced by approximately 10%.

Line Regulation: Output voltage change due to input voltage change is directly proportional to the change in input.

Polarity: Output is floating; either positive or negative terminal may be grounded or floated up to 300 V above ground.

Ambient Operating Temperature: −10 to +65°C. No derating required.

Storage Temperature: −55 to 85°+.

Installation: Plugs into standard octal socket.

OPTIONS

Solder Terminals: All models can be furnished with solder terminals instead of the octal plug. To order, add suffix "L" to model number and add $10.00 to price. Example: Model 24U100 becomes 24U100L.

230 Volt Input: All models can be alternately furnished for operation on inputs of 210 to 250 VAC, 50-400 Hz. Add suffix "-230" to model number and $10.00 to price.

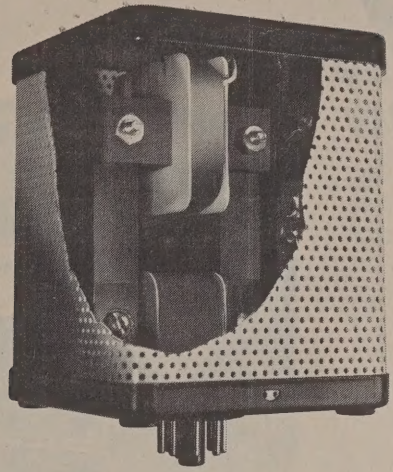
*Suitable for supplying input voltages to NIXIE tubes. NIXIE is a registered trademark of Burroughs Corporation.

Acopian

HIGH ISOLATION REGULATED PLUG-IN



For applications where high isolation in a regulated power supply is required, such as in powering strain gage and other transducer bridge circuits, Acopian offers models with ratings from 5 to 36 volts and 0.050 to 0.200 amperes. All models feature input-output isolation of 10,000 megohms minimum to ground in parallel with 10 pF maximum. To install, simply plug into a standard octal socket. No other mounting is normally required, but threaded holes are provided in the base for fastening the module in other than a vertical position, or to secure it against shock or vibration. Both slot (narrow adjustment about a nominal voltage) and wide voltage adjustment models are available.

BENCHTOP POWER SUPPLIES

These benchtop power supplies provide all the performance and operating features necessary in a laboratory instrument. A wide choice of single and multiple output models offer optimum combinations of the operating features and output ratings that are most often needed.

They are also "human engineered" for convenience and ease of use. Two meters provide for the simultaneous monitoring of voltage and current on single output supplies, or a combination of two output voltages or currents on dual and triple output models. When more than one is required, they may be stacked to conserve bench space. Interlocking design prevents the upper units from slipping off.

Coarse and fine voltage controls permit setting outputs to a high degree of resolution, and adjustable current limiting prevents the load from drawing a higher current than intended. Many models provide constant voltage/constant current crossover, and may be used to deliver a regulated current to a varying impedance load. Some also include adjustable overvoltage protection.

The rugged casework is attractively finished in black and gold. "Five way" output binding posts and a retracting handle contribute to user convenience.

SPECIFICATIONS

Input Voltage: 105-125 Vac, 50-400 Hz, single phase.

Output Ratings: See table.

Regulation, Ripple (constant voltage operation):
Line Regulation: ±0.01% or 2 mv, whichever is greater.
Load Regulation: ±0.01% or 2 mv, which is greater.
Ripple: 0.25 mv rms.
(Model KT7-20, ±10-20 V outputs only: Line regulation, ±0.05%; load regulation, ±0.05%, ripple, 1.0 mv rms.)

Regulation, Ripple (constant current operation):
Line Regulation: 2.0 ma (Model K7S500, 6.0 ma).
Load Regulation: 10.0 ma.
Ripple: 1.0 ma rms (Model K7S500, 2.0 ma rms).

Output Current Control: Outputs marked ACL are short circuit and overload protected by means of a continuously adjustable rolloff type current limiting circuit.

Output marked CV/CC deliver a constant voltage with increasing load until the current limiting point (continuously adjustable) is reached, beyond which voltage decreases as required to maintain a constant current. In addition to providing short circuit and overload protection, this feature permits the supply to be used as a current regulated power source.

Temperature Coefficient: 0.015%/° C.

SINGLE OUTPUT MODELS

OUTPUT VOLTAGE RANGE	OUTPUT CURRENT, AMPS.	CURRENT CONTROL	PRICE	MODEL	CASE SIZE
0-7	1.0	ACL	$99	K7S100	K9
0-7	2.0	CV/CC	135	K7S200	K10
0-7	5.0	CV/CC	190	K7S500	K11
0-18	0.6	ACL	99	K18S60	K9
0-18	1.0	CV/CC	120	K18S100	K10
0-32	0.35	ACL	99	K32S35	K9
0-32	0.6	CV/CC	120	K32S60	K10
0-50	0.35	CV/CC	120	K50S35	K10

DUAL OUTPUT MODELS

OUTPUT VOLTAGE RANGES	CURRENT PER OUTPUT, AMPS.	CURRENT CONTROL	PRICE	MODEL	CASE SIZE
0-20/0-20	0.25	ACL	$139	K20D25	DK9
0-20/0-20	0.5	ACL	175	K20D50	DK10

TRIPLE OUTPUT MODEL

OUTPUT VOLTAGE RANGE	CURRENT PER OUTPUT, AMPS.	CURRENT CONTROL	PRICE	MODEL	CASE SIZE
0-7 ±10-20 (tracking)	2.0 0.5	CV/CC Fixed	$235	KT7-20	TK10

Stability: Over an eight-hour period, following a 30 minute warmup.
Constant voltage operation: 0.1%.
Constant current operation: 15 ma.

Temperature Range:
Operating: 0 to +50° C.
Storage: −40 to +85° C.

Protection:
Input: Line fuse.
Overload: Adjustable electronic current limiting.
Overvoltage: "Crowbar" circuit, continuously adjustable down to 3 volts, protects load by effectively short circuiting output when "crowbar" trip point setting is exceeded. (Models K7S200, K7S500 and KT7-20 only.)

Transient Response Time: Less than 50 μsec, for a step change in input from 105 to 125 Vac, or in output current from no load to full rated output current.

Output Impedance (constant voltage operation):
Less than 0.03 ohms from dc to 1 kHz.
Less than 0.5 ohms from 1 kHz to 100 kHz.

Meters: Two, each accurate to 2% of full scale. On multiple output models, selector switches permit monitoring every output voltage and current.

Controls:
Power switch
Output voltage, coarse and fine adjustments
Output current limit
Overvoltage protection trip point (Models K7S200, K7S500 and KT7-20 only)
Meter switches (multiple output models only)

Construction: Gold-finished extruded aluminum top and sides. Bottom, perforated aluminum panel. Front and rear panels, molded black phenolic. Retracting handle. Input power cord, 3-wire UL approved. Output connections, "five way" binding posts.

Case Size	Dimensions (overall) H x W x D (inches)	Approx. Weight
K9 DK9	3.3 x 8.5 x 10.9	4 lb 1 oz 4 lb 6 oz
K10 DK10 TK10	3.3 x 8.5 x 11.3	5 lb 5 lb 6 oz 7 lb 6 oz
K11	3.3 x 8.5 x 12.2	7 lb 8 oz

Warranty:
All Acopian products listed in this brochure are covered by a firm five year warranty which includes the cost of both parts and labor.

ACCESSORY SOCKETS

FOR PLUG-IN TYPE POWER SUPPLIES

RETMA-numbered screw-type terminals simplify wiring and permit the use of wire terminals or bare wire, 12 to 20 gauge. Rated at 300 volts RMS, 10 Amp.

FOR MINIATURIZED POWER MODULES

Each of these sockets has a sturdy phenolic base with gold plated teflon-insulated contacts.

An Acopian "crowbar" overvoltage protector prevents the output voltage of a power supply from exceeding the voltage rating of the protector under any condition. Any higher voltage switches the protector "on," short circuiting the power supply output and disabling the supply by causing the input fuse to blow. They are often used to protect integrated circuits and other sensitive loads.

Note: Insulated mounting hardware is included.

WHAT DOES ACOPIAN'S 3-DAY SHIPPING PROMISE MEAN?

For more than a decade, Acopian has been shipping standard AC to DC power modules three days after receipt of an order. During this period, the Acopian line has expanded from the original plug-in modules to a number of complete power supply families.

Our unique 3-day shipping guarantee has prompted many questions. Here are some of those most often asked.

Q. What does Acopian's 3-day shipping promise mean?

A. It means that any time you order power modules selected from our catalog, shipment will be made 3 days after we receive your purchase order.

Q. Has Acopian ever failed to meet this promise?

A. Never.

Q. Do I have to ask for 3-day shipment on my order?

A. No. It's automatic. In fact, you must tell us if you want the shipment delayed.

Q. What if I need four or five different models? Does Acopian still keep the 3-day promise?

A. Yes. Guaranteed 3-day shipment applies to one model or to a combination of models.

Q. Is the 3-day promise affected by quantity? Suppose we need 50 or 100 pieces?

A. The 3-day promise applies to small quantities. Acopian will ship a portion of a larger order in 3 days and, after discussing your requirements with you, schedule the balance.

Q. What do you mean by a "portion"? Isn't Acopian hedging?

A. Not at all. Our experience substantiates that shipping five or ten units in 3 days will get almost any project underway. Rarely are larger quantities required at one time.

Q. It takes me so long to get a requisition processed and approved that your 3-day shipment doesn't mean much to me. What's your answer to this problem?

A. Processing your internal paperwork is out of our control. However, verbal orders are acceptable. We suggest you ask your purchasing people to use the phone. Telephone orders to our area representatives are also shipped in 3 days. All we require is the purchase order number.

Q. How long after you ship will I have the power supplies?

A. Transportation time is out of our control. Some carriers are quite efficient. Even overnight service coast-to-coast is not unusual. Your purchasing department probably knows the fastest shipping method to your location. If not, Acopian can recommend the fastest carrier.

Q. I'm curious. You say Acopian has never failed to meet the 3-day promise. How do you do it?

A. We can't tell you all of the details, but it's in our attitude and commitment supported by efficient personnel, streamlined procedures and modern facilities. Facilities that have been designed and equipped specifically to meet our 3-day shipping promise.

It may surprise you to know we manufacture each power supply to order and do not ship from inventory.

Q. I've seen other power supply manufacturers advertise "stock delivery." Why should I consider 3-day shipment a significant benefit?

A. Because a "delivery-from-stock" promise is not precise. It may even be misleading. Consider what happens if the power module you require is out-of-stock when your order reaches a typical vendor. Four to six weeks is not unusual before inventory is replenished and your order is shipped. Consider further how this problem is compounded when you need four or five regulated outputs for your project. The significant difference, then, is that fulfillment of a "ship-from-stock" promise is dependent on a variable —the quantity in stock when your order is received. Acopian's 3-day shipment promise contains no unknowns.

Q. In a legitimate emergency, do you ever do better than 3 days?

A. Yes. Please call in an emergency. If we can't do it, we'll tell you immediately.

If you don't find the answers to your questions here, please call or write to our Vice-President, Marketing. You will receive a prompt and straightforward reply.

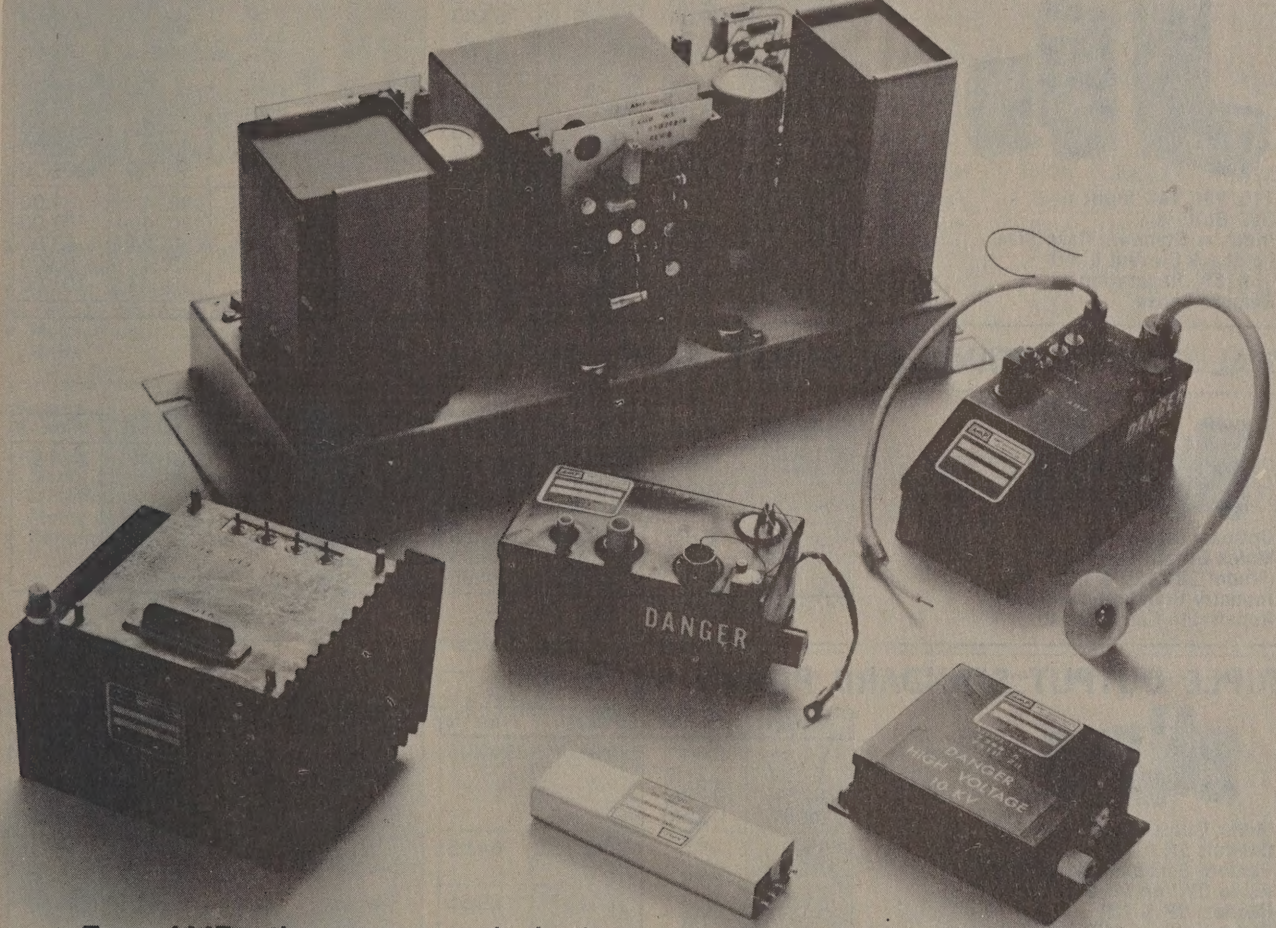
The power you need is the power you get.



From AMP—the power supply that's a perfect match to the system, any electronic system. We're the specialists.

The power behind multicolor CRT displays, for instance, with a big family of 1 through 18-KV fast-switching supplies. Ones that change output voltage levels in millionths of a second, and do it with long-life dependability in environmental extremes.

Whatever your application, military or commercial—no matter how demanding the complexity, performance and miniature size requirements — we'll fit a power supply to your need. With over 1000 existing designs—up to 60 KV and 2 KW —your power supply could be "on the shelf." Or we'll quickly tailor one for you.

And we also engineer some very unusual low-voltage supplies, as well as multiple output types combining both low and high voltages. All feature our unique oil/gas dielectric for high reliability and long life.

Give us your specifications. We'll get data back to you immediately. Contact: AMP Incorporated, Capitron Division, Elizabethtown, PA 17022. (717) 367-1105.

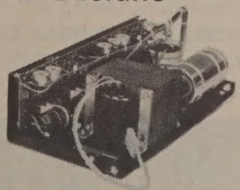
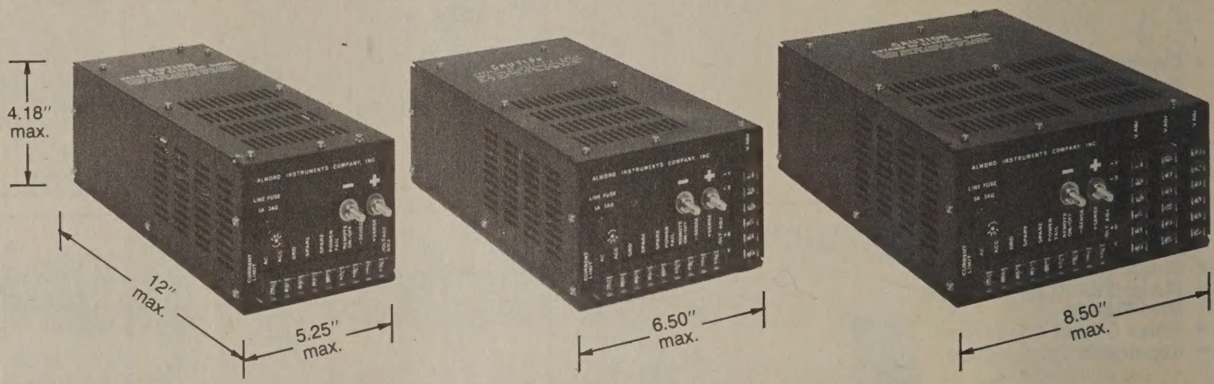
CUSTOM DESIGNS



Call us for quotes on your high volume low cost linear or switching regulated custom supplies.

The SWITCHERS from ALMOND



High efficiency over extreme input line voltage variation makes Almond Switchers ideal for new system designs or existing system update.

Ruggedized, modular construction provides a reliable power source for single or multiple DC output voltages.

350 watts output over −10°C to +60°C without derating.

Output regulation <.25% — output ripple and noise (PARD) < 1%.

All protective circuitry standard (i.e. soft start, current limit, OVP, thermal).

28 STANDARD MODELS AVAILABLE providing standard voltage combinations of 5, 12, 15, 18, 24 and 28 VDC at currents from 2 to 70 amperes. Special output requirements can be assembled from standard modules.

Delivery: Off the shelf to 30 days.

Contact the Factory or your Almond representative for detailed specifications or special requirements. Ask for catalog AN1577.

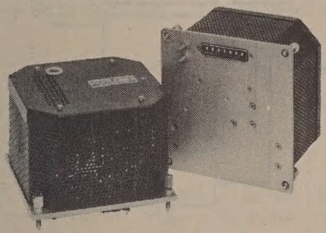
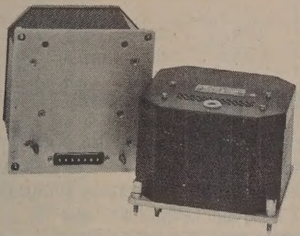
MILITARY QUALIFIED POWER SUPPLIES

Over the past eight years, AIC has designed, developed and produced over 5,000 military-qualified power supplies for over 50 major programs. These power supplies are fully qualified to the following military specifications: MIL-E-16400, MIL-S-901, MIL-E-5400 and MIL-STD-461. Programs include U.S. Navy S3A; U.S. Navy DD963; U.S. Navy military retrofit programs; various U.S. Navy navigation systems; U.S. Air Force fighter aircraft; and aircraft computer power supplies. A few examples are shown below.



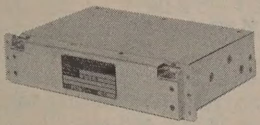
Low Output Noise
P/N 2-11075

Shipboard qualified to MIL-E-16400. Features 115V, 3Ø, 400 Hz input ±15V at 3.2A output. Line/load regulation 0.01%. Output noise less than 10 microvolts narrow band noise from 100 Hz to 50 KHz.



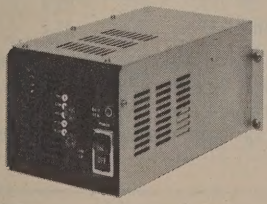
P/N 2-10701

Shipboard qualified to MIL-E-16400. Features 115V, 3Ø, 400 Hz input, 5V at 25A output. Line/load regulation 0.5%. Ripple 25 mv p-p. Efficiency 47%.



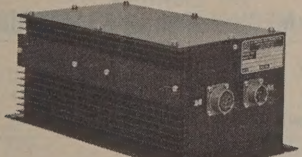
P/N 2-11470

Aircraft computer multiple output power supply qualified to MIL-E-5400. Input 28±4V. Features 4 separate regulated outputs and 2 watts/cu. in.



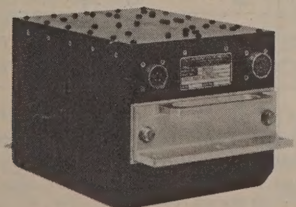
P/N 2-11020

Shipboard qualified multiple input, multiple output. Features 115/230/28 Vdc input with 4 separate regulated DC outputs, output power 100 watts. This power supply contains internal battery charger and power on clear and power fail logic interface.



P/N 2-10568D

Shipboard qualified. Features low magnetic radiated noise. Input voltage 115/230, output 28V, 12A. Ripple 20 mv p-p.

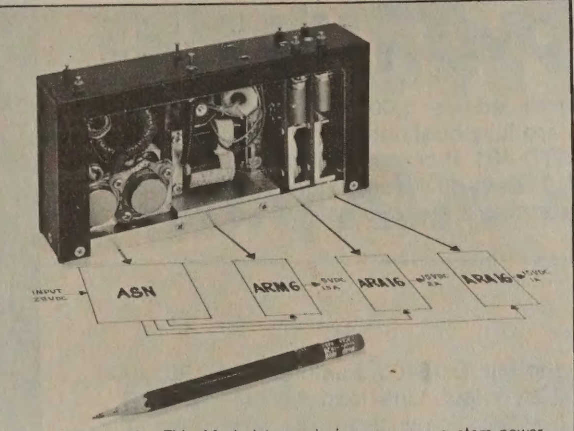


P/N 2-11290

480V input, 60 Hz, 3Ø. Features low power line harmonic distortion reflected onto the power line due to rectification. This unit delivers up to 1 kilowatt of DC power and reflects less than 4% harmonic distortion onto the input power line.

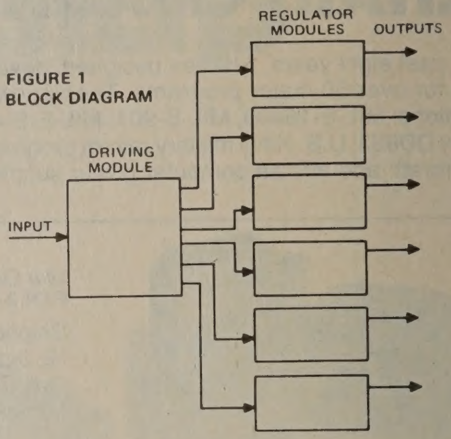
ARNOLD MAGNETICS

Design As You Order MODULAR POWER SUPPLIES



Arnold Magnetics Thin-Mods let you design your own custom power conversion system as you order. No engineering charges . . . no lost design time. And, the complete power supply is provided in a pre-tested, encapsulated miniature package.

FIGURE 1
BLOCK DIAGRAM



HOW TO SPECIFY AND ORDER

(OR ONE PHONE CALL AND WE'LL DO THE REST—(213) 870-7014 OR (213) 390-3537)

1. **BLOCK DIAGRAM:** Construct your Power Conversion System block diagram in Figure 1.
   A. Use one block for the Driving Module.
   B. Use one block for each output required.
2. **REGULATOR SELECTION:** Select Regulator Modules from Table M1. Enter the following in Table M3 for each output.
   A. Module Model Number.
   B. Output voltage (nominal) from Table M1 in Volts column.
   C. Maximum output current for application in Amps column.
   D. Output power in Watts column.
   E. Input power (Watts/Efficiency) in Input Power column.
3. **DRIVING MODULE SELECTION:** Select Driving Module from Table M2 using prime power source and Total Input Power from Table M3. The Driving Module must be capable of providing more power than the Total Input Power required for the Regulator Modules.
4. **CASE SIZE SELECTION:** Using the sum of all module lengths selected from Table M3, select the shortest case size that will accommodate from Table M4.
5. **PRICING:** Price and Weight for complete power system is the sum of the applicable column from Table M3.
6. **PART NUMBER:** Construct Power Converter Part Number as follows: Driving Module Model Number from Table M2 — Last Letter of Regulator Module Model Number from Table M1 — Operating Voltage (VDC)/Operating Current (AMPS) — Case Size Letters from Table M4. List Regulators in descending order of operating current.

   Example: APT-M5/15V-T30/1-A15/.2-DA
   INPUT: (APT)-105 to 125 VRMS 47-500 Hz
   OUTPUTS:
   1. (ARM 6) — Delivers 5 VDC @ 15 AMPS, overvoltage protection option (V) at 6.5 volts max.
   2. (ART 30) — Delivers 30 VDC @ 1 AMP
   3. (ARA 16) — Delivers 15 VDC @ .2 AMP

   CASE SIZE: DA (Table M4) 10½ × 1⅝ × 3⅝
7. **DELIVERY:** 2-4 weeks ARO.
8. **HOW TO ORDER:** Order using AMC P/N (defined as above) and base price (1 pc) from Table M3. Price discounts 2-4 pcs. .90 × base price, 5-9 pcs .85 × base price, 10-24 pcs. .80 × base price. Consult sales representative or factory for higher quantity price discounts and special modules.

TABLE M3 SPECIFICATION WORK FORM

Required Outputs				Regulator Input Power (Watts/Eff.)	Module			
No.	Volts (1) (Nominal)	Amps (Max. Req.)	Output Power (Watts)		Model Number	Length (Inches)	Price (1 Pc.)	Weight (Oz.)
1								
2								
3								
4								
5								
6								
Total Regulator Input Power								
Driving Module Output Power (2)								
					Total			

NOTES: (1) From Table M1.
(2) From Table M2, must exceed Total Regulator Input Power.

TABLE M4 MECHANICAL CHARACTERISTICS

Case Size (See Table I, Next Page)	Number of Terminals	Total of Module Lengths (Inches)	External Length (Max. Inches)	Number of Mtg Holes
AA		3.2	31/2	4
BA		4.7	5	4
CA		6.7	7	6
FA		8.2	8-1/2	6
DA		10.2	10-1/2	6
AB		2 X 33.2	3-1/2	4
BB		2 X 4.7	5	4
CB		2 X 6.7	7	6
FB		2 X 8.2	8-1/2	6
DB		2 X 10.2	10-1/2	6

Terminals: Turret style with Teflon insulation. Case: Black anodized aluminum.
Mounting Holes: Threaded for 6/32 screw, ¼" deep.

Ripple & Noise (max): 0.1% VRMS + 10 MV for ARA, ARC & ARB
0.5% VRMS + 10 MV for ARF, ARM & ART

Temperature Coefficient: 0.01%/°C for ARA, ARC & ARB
0.02%/°C for ARF, ARM & ART

Operating Case Temperature: −10°C to +71°C

Isolation: Input, case & outputs are isolated (floating) from each other.

Short Circuit Protection:
All outputs are short circuit protected and feature foldback current limiting.

Output Voltage Adjustment Range: ±5% minimum

APPLICATION NOTES

1. Isolation test voltage is 50 VDC or 1.3 × voltage, whichever is greater.
2. ATA & ATB driving modules may not be used with ARF & ARM regulator modules.
3. Add 0.6 inches to the ATA & ATB module length for each additional amp of output current over 3 amps for each regulator module.
4. Efficiency: Divide the total regulator input power by the driver efficiency to obtain the unit input power. Divide the total output power by the unit input power to obtain the approximate unit efficiency.
   Note: The actual unit efficiency will vary, depending on the input voltage and output current levels.
5. Consult the factory for output voltage adjustment ranges greater than ±5%. The unit efficiency will decrease and output power derating might be required.
6. Consult the factory for special requirements
   - (a) Straight cut off current limiting for capacitor charging and filament applications.
   - (b) Non-standard case sizes.
   - (c) Steel or helicoil mounting inserts.
   - (d) Additional filtering for low ripple & noise requirements.
   - (e) Low level output turn-on/turn-off by logic control.

TABLE M2
GENERAL SPECIFICATIONS FOR DRIVING MODULES

- 115 VAC, 47-500 Hz
  (25 KHz Converter)
  APS — 100 Watts

High Voltage — Isolated

AC-DC POWER SUPPLIES

ARNOLD MAGNETICS

Model PHU — 115 VRMS 47-500 Hz to Single or Multiple DC Outputs

FEATURES

- Wide output voltage choice
- High voltage input to output isolation
- Multiple outputs standard
- Short circuit protected
- Miniature size
- Lightweight
- Fully encapsulated
- Meets MIL-E-5272

Single Output Models

SPECIFICATIONS

Input: 105 to 125 VRMS, 47-500 Hz

Output: 2 VDC thru 2000 VDC

Output Voltage Adjustment: +5.0% minimum

Line Regulation: 0.3% maximum

Load Regulation: (½ FL-FL) 2.0% maximum

Output Isolation: 3 x output voltage (1kV min., 5kV max.)

Operating Temperature: —10°C to +71°C (case temp.)

Cooling: Primarily cooling by conduction thru mounting surface.

Environmental: Per MIL-E-5272

OPTIONS FOR POWER SUPPLIES

Consult factory for prices, specifications and availability.

Option Letter	Option
A	External (Remote) output voltage adjustment
C	Line to Line and center tapped load configuration
(CT)	Center tapped outputs
E	Non-standard input voltage range
G	Flexible leads
I	EMI/RFI Qualified
S	Short terminals
T	Wide temperature range
TP	Input transient protection
V	Overvoltage protection

TABLE I — CASE SIZES FOR POWER SUPPLIES

Case Size	L (Length)	W (Width)	H (Height)	Approx. Weight (Oz.)

DC-DC REGULATED POWER CONVERTERS

- 0.2% Line Regulation (LL-HL)
- 0.2% or 20 mV Load Regulation (NL-FL)
- Pulse Width Modulated Inverters or Switching Output Regulators for Outputs > 10 A or 100W
- High Efficiency (70% Typ. @ Fl. @ Nom. Line)
- Overload/Short Circuit Protected
- Isolated Input/Output
- 0.3% Maximum Ripple
- 5% Adjustment Range
- Overvoltage Protection Option[1]

AC TO DC REGULATED POWER CONVERTERS

- Pulse Width Modulated Inverters or Switching Output Regulators for Outputs > 10A or 100W
- 105-125 VAC, 47-420 Hz Input
- 220 VAC Input Option[2]
- Operate on AC or DC Inputs
- 0.2% Line Regulation (LL-HL)
- 0.2% or 20 mV Load Regulation (NL-FL)
- 0.3% Maximum Ripple
- Overload / Short Circuit Protected
- Lightweight / Small Size
- 5% Output Voltage Adjust Range
- Overvoltage Protection Option[1]
- Submodular Construction

---

[1] Overvoltage Option: Add "V" followed by voltage to be protected. Example: ADR1128 V5 has 5 VDC output protected. Price: $20, for outputs up to 12A, $30 over 10A.

[2] 220 VAC Input: Contact factory.

SPECIAL POWER SYSTEMS

- Xenon Power Supplies and Igniters: 75W, 150W and 300W
- High Voltage Converters, DC/DC and AC/DC: Up to 40 KV @ 200W
- Square Wave Inverters, DC/AC and AC/AC: 40 Hz to 25 kHz, 30W to 1200W
- Special Voltages and Currents, Single and Multiple Outputs with No Engineering Cost
- X-ray Tube Power Supplies Using Switching Converters

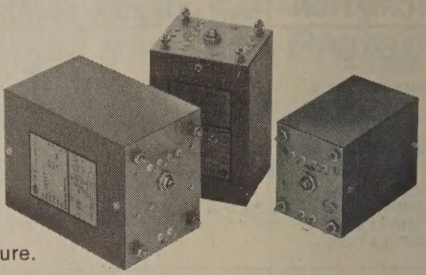
CEA's DC TO DC SWITCHERS

STANDARD FEATURES INCLUDE



- 80°C BASE TEMPERATURE without derating.
  Floating outputs, + or − output may be ±500VDC from case.
  Remote sensing on regulated models, eliminating load lead errors.
  Adjustment of output ±5% regulated models.
  Other ranges are optional.
  Remote adjustment optional at no charge.
  Series starting with rated load, for multiple supply to common load application.
  Short circuit output currents will not damage supplies.
  No voltage overshoot on turn-on or turn-off.
  MIL-T-27 modular case sizes with removable covers for servicing.
  Critical components pretested, aged, and graded.
- BURN-IN (stabilization), 16 hrs. min. at rated load and high base temperature.
- 100% TESTING after burn-in, test data with shipment. **Specifications guaranteed, not just typical.**
- 3 YEAR WARRANTY for parts and labor against defects in workmanship and materials.

CEA2 SERIES — DC TO DC

SPECIFICATIONS

REGULATION — STABILITY — RIPPLE

Class of Regula-tion	Line Regulation for Full DC Input Change	Load Regulation from 10% to Full Load	Ripple P-P*	Temperature Coefficient Per Degree C	Effi-ciency Up to	Option Re-quired
A	None	10% + .5 V	3.0%	0.1%	90%	F
C	0.5%	0.5%	1.0%	0.02%	80%	None

*Output ripple measured at 300 kHz bandwidth. Output voltages less than 10 VDC have minimum ripple of 20 mv.

Input Voltage: 21 to 30VDC standard, other input ranges are optional.

Recovery Time: As fast as 10 μs for "A" regulation supplies. For "C" supplies typically less than 1ms for a 50% to 100% load change.

Insulation Resistance: 100 Megohms DC for input, output and case.

Temperature, Base: −20°C to +80°C operating, −40°C to +85°C storage.

CEA's DC TO DC SWITCHERS

CEA's SPECIFICATIONS (CONTINUED)

Input Voltage and Frequency: 105 to 125 volts, 50 to 420 Hz or 120 to 180VDC, extended ranges optional.

Efficiency: Up to 80%. The output rectifier voltage drop of 1.2 volts is a major loss, hence a 5V output is 64% on some models.

Insulation Resistance: 100 Megohm DC standard for input, output and case.

Temperature, Base: −20°C to +80°C operating, −40°C to +85°C storage.

Recovery Time: Typically less than 1ms for a 50% to 100% load change.

CALL FACTORY TOLL FREE FOR BASE PRICES.

OPTIONAL FEATURES

The extra charge for each option is either a flat rate or percentage of the base model price; add the larger number to the base price.

Symbol Option	Option Description
	FIXED OUTPUTS
F	Fixed output ±1.0%
F1	Fixed output ±0.1%
F2	Fixed output ±0.01%
	ADJUSTABLE OUTPUTS
G	Output adjust range ±1%
Std.	Output adjust range ±5%
G1	Output adjust range ±10%
G2	Output adjust range ±20%
G3	Output adjust range ±30%
G4	Output adjust range ±40%
G5	Output adjust range ±50%
Note: Next larger case size may be required for Options G2, G3, G4 and G5. The temperature coefficient is degraded in Classes B, C and D for Options G2 thru G5.	
	EXTENDED TEMPERATURE RANGE
H1	Temperature range −55°C to +80°C
H2	Temperature range −40°C to +80°C
H3	Temperature range −55°C to +115°C
	DUAL OUTPUT ISOLATION
K	Isolated outputs
	AC INPUT VOLTAGE AND FREQUENCY
L	Input 95-135V, 50-420 Hz
L1	Input 208V ±10%, 50-420 Hz
L2	Input 230V ±10%, 50-420 Hz
L3	Input 460V ±10%, 50-420 Hz
L4	Input 105-125V, 400 ±20 Hz
L5	Input 115/230V, 50-420 Hz
	PROTECTION CIRCUITS
P1	Current limiting
P2	Overtemperature output
P3	Crowbar voltage limit

Symbol Option	Option Description
	REMOTE PROGRAMMING
R	Remote adjust (no pot provided)
R1	Remote adjust with 1% linearity
R3	Remote adjust without pot provided (A&B only)
	OPTIONAL STARTING CIRCUITS
S1	Start with 30,000 mfd/amp-100,000 mfd. max.
S2	Start positive output first
S3	Start negative output first
	HIGH ISOLATION
T	40 db transformer shielding
T1	100 db transformer shielding
	HIGH FLOAT VOLTAGE
U	Output float up to ±1000V
	RUGGEDIZED
W	Potted for ruggedization in polyurethane resin HA, JA KA, LA MA, NA PA QA RA SA TA

CEA's CUSTOM POWER SUPPLIES

- MILITARY APPLICATION (JANTX SEMICONDUCTORS)
- TTL OR CMOS COMPATIBLE
- HIGH EFFICIENCY SWITCHERS
- INPUT PROTECTION CIRCUITS (MIL-STD-1399 OR 704)
- RFI/EMI (MIL-STD-461A)
- MULTI-OUTPUT MODULES OR RACK SUPPLIES

These standard catalog power supplies can be electrically and mechanically modified for specific applications. Our sales engineers are standing by to discuss your particular requirements.

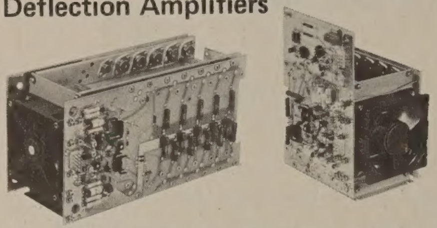
CPS

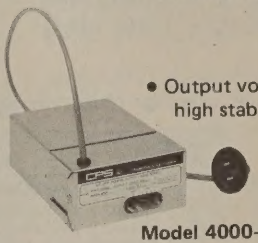
HIGH PRECISION, HIGH VOLTAGE POWER SUPPLIES

For high-precision electron beam control in CRT's, X-Ray equipment, scanning electron microscopes and photomultiplier tubes. A full range of standard and custom models offered to commercial and Mil-Spec OEM's.

Precision CRT Focus and Deflection Amplifiers

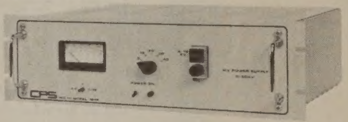


Cost-effective devices optimized for high writing rates and crisp character generation. Unique power-on-demand feature offers power savings of at least 50% over conventional systems and accommodates rapid and accurate beam focusing and positioning. High voltages up to ±90VDC.



Model 4000-1009

Model 100-50



FEATURES

- Output voltages to 50kV
- Low ripple, precision regulation, high stability
- Remote programming and metering models
- Short circuit and arc protection
- Self restoring
- Multiple output voltage options
- Solid state design, advanced encapsulation techniques utilized
- UL Recognition

APPLICATIONS

Radiographic Equipment (Medical and Material Analysis) • Radar Displays • Precision CRT Displays • Phototypesetters • Photomultiplier Tubes • Optical Recorders • COM (Computer Output Microfilm)

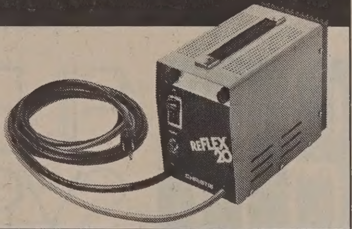
REFLEX® 20 20-MINUTE CHARGERS & NI-CAD BATTERY PACK SYSTEMS

Patented REFLEX battery charging principle employing depolarization pulses, provides complete recharge for sealed ni-cads in 20 minutes.

Companion long-life REFLEX-20 battery packs with ½ AA to F size cells are produced specifically for Christie REFLEX chargers.



REFLEX® CHARGERS FOR AIRCRAFT APPLICATIONS

The same principle is employed for fully charging vented aircraft 5 to 50 ampere-hour ni-cads in one hour.

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

ORDERING INFORMATION

PS 207 — 22 — 3000 — VQ +F — P

❶ ❷ ❸ ❹ ❺ ❻

❶ **Basic Model Number Determines Wattage, Size and Mounting.**

❷ **Input Voltage: This number indicates $E_{IN\ MIN}$ on the regulated units and E_{IN} Nom. on the unregulated units.**

❸ **Output Voltage: May be any voltage between 2 volts and 1500 volts AC or between 5 volts and 6000 volts DC.**

❹ **Rectifier System: Select for applicable output voltage, refer to rectifier systems above.**

❺ **When a positive ground is required add +F after rectifier system. Nothing is added for negative ground.**

❻ **Modifications:**
—P for program connection.
—E for enable operation.

A On output voltages less than 20 volts the switching spikes will be about 100 mv p-p. These can be easily reduced by adding a capacitor on the output terminals.

B Because of common mode ripple it is necessary to know when a positive ground system is used (see ordering information).

C The conversion frequency will be approximately 18KHz at nominal input and output voltages.

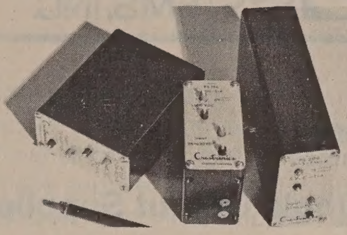
ISOLATION

All outputs greater than 100 VDC will be isolated to 6000 VDC. All outputs less than 99 VDC will be isolated to 100 VDC. Isolation resistance will be greater than 10K Meg. For special isolation requirements call our engineering department.

Reliability

Short Circuit Protected

Filtered Input



Crestronics Inc. DC to DC Converters are designed as a power supply for electronic circuits with a minimum of interference in the audio and rf ranges. The 18KHz conversion employed eliminates all audio range problems and an internal input filter reduces the rfi conductance noise to a level of less than 30 mv P-P across a one ohm resistor in series with the input.

REGULATED UNITS

1.0 INPUT

1.1 Voltage - -$E_{IN\ MIN}$ - - Customer may specify any input voltage between 11 and 28 volts DC. $E_{IN\ MIN}$ is the lowest input voltage applied. This should include the lowest excursion of ripple.

1.2 Input Voltage Differential - - ΔE_{IN} - - The normal ΔE_{IN} is 4 volts DC. For ΔE_{IN} greater than 4 volts derate the input current to

$$I\ \text{derate} = \frac{6\ I_{IN\ MAX}}{\Delta E_{IN} + 2}$$

1.3 Input Current - - $I_{IN\ MAX}$ - - See Model Numbers
$I_{IN\ MAX}$ shall be derated for a ΔE_{IN} greater than 4 volts—See 1.2
$I_{IN\ MAX}$ shall be derated for greater than 70° operation—See 10.2

2.0 OUTPUT

2.1 Voltage - - E_o - - Customer may specify output voltage up to 1500 VAC ⊓⊔ or 6000 VDC. See ordering information # ❸

2.1.1 The output voltage is screwdriver adjustable from —20% to +5% of nominal.

2.2 Power - - P_o - - The output power is expressed as $(.7\ E_{IN\ MIN}\ I_{IN}) - I_o$

3.0 REGULATION

3.1 Line .... .01%/ △ input volt
3.2 Temperature .... (.02%/°C) —2mv/°C
3.3 Load .... 100% to 10%
For 30 VDC & Over 3%
For 29 VDC & under .... $\% = \frac{(.02\ E_o) + .3}{E_o \times 10^{-2}}$

4.0 EFFICIENCY - - Efficiency is expressed in % as $\frac{(.7\ E_{IN\ MIN}\ I_{IN}) - I_o}{E_{IN\ MIN}\ I_{IN} \times 10^{-2}}$

UNREGULATED UNITS

5.0 INPUT

5.1 Voltage - - E_{IN} - - Customer may specify any input voltage between 5 and 35 VDC

5.2 Current - - I_{IN} - - See Model Numbers

6.0 OUTPUT

6.1 Voltage - - E_o - - Customer may specify any output voltage up to 1500 VAC or 6000 VDC.

E_o is proportional to E_{IN} Ratio $= \frac{E_{IN} - 1}{E_o}$

E_o shall not exceed 1.1 E_o

6.2 Power - - P_o - - $P_o = (.75\ E_{IN}\ I_{IN}) - I_o$

7.0 REGULATION

7.1 Line - - - - Directly proportional

7.2 Load - - - 100% to 10% $\% = \frac{(.05\ E_o) + .3}{E_o \times 10^{-2}}$

8.0 EFFICIENCY - - Efficiency is expressed in % as $\frac{(.75\ E_{IN}\ I_{IN}) - I_o}{E_{IN}\ I_{IN} \times 10^{-2}}$

9.0 RIPPLE - - - - .3% P-P max.

GENERAL

10.0 TEMPERATURE

10.1 Temperature measured at mounting surface
10.2 For temperature greater than 70°C — Derate input $I_{IN\ MAX}$ 1%/°C

11.0 CASE .... Black Anodized Extruded Aluminum
11.1 Back Plate .... Clear Anodized Aluminum
11.2 Name Plate .... Metal Photo Corp.
11.3 Size .... See Model
11.4 Mounting .... See Model
11.5 Weight .... 1.7 gram per cubic CM

12.0 TO DETERMINE INPUT CURRENT $I_{IN} = \frac{(E_o\ I_o) + I_o}{.7\ E_{IN\ MIN}}$

13.0 PROGRAMMABLE - - - - "P" Suffix with E_o set at nominal, E_o will be approximately1%/.1ua or 1%/.1V. From the summing junction, approximately 7.0 volts.

14.0 ENABLE - - - - "E" Suffix unit will normally be inhibited with ½ E_{IN} on enable lead. Unit will be Enabled when Enable lead is within 1V of negative input. Enable current will be $\frac{E_{IN}}{10K}$

DATEL SYSTEMS, INC.

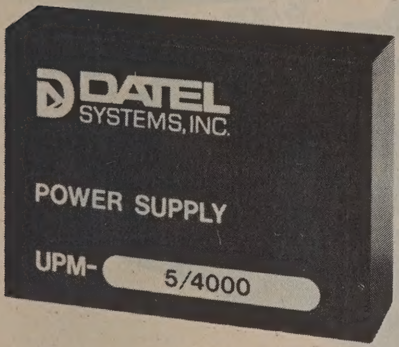
SINGLE OUTPUT POWER SUPPLIES

This line of single output, voltage regulated DC power supplies features six 5 volt output models with output currents from 250mA to 4 amperes. In addition, there are 4 other models with 6V to 15V outputs. All outputs have current limiting short circuit protection. Temperature coefficients are .02%/°C and output ripple voltage is 1 to 2 millivolts RMS.

Model UPM-5/4000 is a special high current, high efficiency supply in a compact C3 case size. Full load efficiency of 65% is achieved by a high performance switching regulator.

The UCM-versions have input-output connections made to a terminal strip on top of the modules. These supplies are useful in applications where it is impractical or undesirable to use printed circuit cards or sockets. For simple mounting to a metal chassis, screw inserts are provided on the bottom of the modules.



INPUT VOLTAGE SPECIFICATIONS

Standard input specification: 115VAC ±10% @ 60-440 Hz
E version: 220VAC ±10% @ 48-440 Hz
J version: 100VAC ±10% @ 48-440 Hz

There is no extra charge for E and J versions. When ordering, add E or J suffix after model number. Note that in some instances the module size is larger for the E version. MS-7 sockets for the UPM-version are $3.50 each.

DUAL OUTPUT POWER SUPPLIES

This broad line of dual output, voltage regulated DC power supplies features 14 different models with a wide choice of output voltages and currents. Output voltages are ±5, ±12, and ±15VDC with ±1% accuracy. Rated output currents range from ±60 to ±500mA with output short circuit protection.

Temperature coefficient is .02% per degree Centigrade and output ripple voltage is 1 to 2 millivolts RMS. These rugged, encapsulated modules are useful for powering a wide variety of devices including linear IC's, op amps, data converters, and other analog circuits.

The BCM-versions have input-output connections made to a terminal strip on top of the modules. These supplies are useful in applications where it is impractical or undesirable to use printed circuit cards or sockets. For simple mounting to a metal chassis, screw inserts are provided on the bottom of the modules.

INPUT VOLTAGE SPECIFICATIONS

Standard input specification: 115VAC ±10% @ 60-440 Hz.
E version: 220VAC ±10% @ 48-440 Hz.
J version: 100VAC ±10% @ 48-440 Hz.

There is no extra charge for E and J versions. When ordering, add E or J suffix after model number. Note that in some instances the module size is larger for the E version. MS-7 sockets for the BCM-version are $3.50 each.

TRIPLE OUTPUT AND MICROCOMPUTER SUPPLIES

TRIPLE OUTPUT SUPPLIES

These power modules are specially designed for operation with data conversion and other circuits where both a dual analog supply and a 5V logic supply are required. Using a triple output supply to power these circuits can be more economical than using two separate equivalent supplies.

MICROCOMPUTER SUPPLY

Model 1200 microcomputer supply is a DC-DC converter designed to operate from a 5 volt logic supply to power a CPU and 4K of memory. The output voltages of +12, −5, and −9V in conjunction with the 5V input will power an 8080 CPU and four 2107A RAM's or four 1702A ROM's. This supply operates with a full load efficiency of 48% and has output current limiting protection.

Operating temperature range is −25°C to +71°C and storage temperature range is −55°C to +85°C.

Mating sockets, 2 DILS-1 or DILS-2 terminal strips, are $5.00 per pair.

HEAVY DUTY POWER SUPPLIES

The MP Series high power, line operated supplies are new entries in the field of low cost, open frame type supplies. Although priced competitively with the open frame units, the MP Series offers significant advantage in performance and design features. The 16 models in this series offer popular single, dual, and triple outputs for use with data conversion devices, operational amplifiers, and other analog and digital circuits. Output power capability ranges from 15 Watts to 105 Watts and prices are from $38 to $149.

The unique feature of the MP Series over open frame type supplies is its conservative thermal design which results in full rated output over 0°C to 65°C ambient temperature and only 15% derating at 71°C. This results in approximately twice the output power at 65°C compared with open frame supplies. The careful attention to thermal design is evidenced by use of conservatively rated components including 85°C computer grade aluminum electrolytic capacitors, integral heat sink and chassis design, and a high efficiency linear regulator design. The power transformer is a low loss type with no derating for 50 Hz operation. It is layer wound with polyester impregnation, and incorporates a Faraday shield which is connected to chassis ground. Power supply efficiency is 50% for ±12V and ±15V outputs and 40% for 5V outputs.

Other significant features include output current limiting protection, .05% tracking of dual outputs, barrier strip terminal connector, ventilating protective cover, remote sensing with open lead protection, and ±5% output voltage adjustment by means of externally accessible trimming potentiometers. In addition, all 5V outputs have built-in overvoltage protection as a standard feature.

DC-DC CONVERTERS

1 AND 3 WATT DC-DC CONVERTERS

This broad line of DC-DC converters features 17 one watt models and 18 three watt models with single and dual output voltages. Input voltages are 5, 12, and 28V with single outputs of 5, 12, 24, and 28V, and dual outputs of ±12, ±15, and ±18V. Output voltage accuracies are ±1% with .02%/°C temperature coefficient. Other features include low output ripple, 100 megohm isolation, grounded internal copper shield, and output current limiting.

The 5 watt series use 2 DILS-1 or DILS-2 terminal strips (at $5.00/pair) for sockets. The 10 watt series use the MS-7 socket at $3.50 each. The 4.5 watt series use the MS-6 socket at $3.50 each. 24V and 48V input models of these DC-DC converters are available on special order. Contact factory for price and availability.

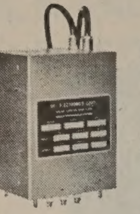
HIGH VOLTAGE EQUIPMENT

UNREGULATED MODULES COMPACT HIGH VOLTAGE

SERIES "S"



These power supplies are designed for operation from either a 0-115 volt or 0-125 volt line at 60/400 cycles. Three input terminals are provided to permit proper line connection. The output is available from shielded polyethylene cables and may be varied over the full range by varying the input AC line. The two output cables are insulated for the full output voltage, so that either the positive or negative terminal may be grounded.* All units have selenium rectifiers and are hermetically sealed in an epoxy, vacuum filled, metal case.

Units for 50 cycle operation at various line voltages are available on request.

*Model 40-2-4 is designed with one output cable for single polarity operation. When ordering, please specify polarity.

*Single polarity unit, state positive or negative output.
**Ripple at 400 cycles is 15% of ripple at 60 cycles, shown above.

PHOTOMULTIPLIER POWER SUPPLIES PMS SERIES

The PMS Series is a family of extremely compact, rugged design DC to DC proportional converters for use as power sources for photomultiplier and other tube applications. They feature reverse polarity protection, output isolated from the input, and are momentary short circuit protected.

HIGHLY REGULATED ADJUSTABLE HIGH VOLTAGE MODULES SERIES "HRM"

SPECIFICATIONS

Input: 115V ±10% 60 cps
Output: Regulation for 10% line change .03% max. Regulation for NL to FL .03% max
Ripple: .03% RMS max
Temp. Range: −54°C to +65°C operating
Temp. Coefficient: 0.02%/°C

- No voltage overshoot
- Adjustable output
- Short circuit proof (no fuses)
- Meet environmental and transient requirements of MIL-E-16400

"HIGH POT" TESTERS "TC" SERIES POWER SUPPLIES

DEL TC Series multi-purpose D.C. Power Supplies are compact, fully instrumented and fully protected units providing ratings up to 80,000 volts D.C. continuously variable.

Seleninum Rectifiers used throughout to provide long life and instantaneous operation. No filament warm up time required.

All high voltage components immersed in special high grade insulating oil. This assures LONG trouble-free LIFE.

RACK MOUNT POWER SUPPLIES "RHPT" SERIES HIGH POT TESTER

The Del RHPT series of rack mounted Hi Pot Testers are general-purpose power supplies which are fully instrumented, completely enclosed, and fully protected. These units are designed for standard 19-inch racks and have light gray panels. They are recommended for all commercial, industrial, and laboratory uses where reliable dc high-voltage sources are required.

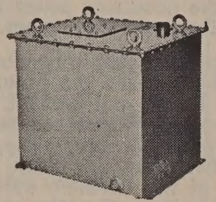
SERIES "O" OIL INSULATED TANK UNITS



DEL SERIES "O", oil insulated, High Voltage Power Supplies offers one of the most comprehensive lines of basic high voltage units available to industry and laboratories. These D.C. supplies are designed to provide long, reliable service in such applications as dielectric testing, capacitor chargers, electrostatic precipitators, electron microscopes, image intensifiers, plasma research and accelerators. Series "O" supplies feature reversible polarity on most units, shielded polyethylene output cables, high quality insulating oil in dust free tank, quiet, long life operation with low corona.

† Polarity — All units feature reversible polarity except Models PSO 40-2-3, PSO 50-1-2, and PSO 60-1-1A which supply positive outputs only.

NOTE: Larger units are shipped without oil to reduce transportation costs. See notations on price list.

COMPLETE LINE OF CONTROL PANELS AND REGULATED CONTROLS AVAILABLE FOR ALL SERIES "O" POWER SUPPLIES.

HRPS SERIES HIGHLY-REGULATED — POWER SUPPLIES

- **Designed to Withstand Vacuum Sparkovers**
- **Automatic Overload Tripout**

Input: 115 or 230 volts 50/60 Hz.

Output: Adjustable 5 to 100% (See Chart Below)

Ripple: .01% RMS — at full load

Response Time: 100μsec

- **Hybrid Series Regulator**
- **Fast Dynamic Response**
- **Short Circuit Protection**

Regulation: Line: ±.0025% (For ±10% Line Change). Load: ±.005% (0 to Full Load)

Resolution: 1%

Size: 1-15KV Units—24 x 29 x 53 in.
30-50KV Units—24 x 29 x 70 in.

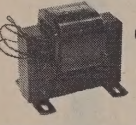
TRANSFORMER HIGH VOLTAGE LINE ISOLATION



OPEN TYPE CONSTRUCTION — EPOXY COATED

These Isolation Transformers are designed for continuous operation at rated voltage and power. They are epoxy coated for use in air and are well suited for applications requiring a reliable source of isolated line voltage at power ratings up to 1 KVA.

Primaries: 115/230V 60 Hz. **Secondaries:** 115V.

HIGH VOLTAGE TRANSFORMERS

FOR VOLTAGE DOUBLER OR ONE END GROUND OPERATION

These transformers are designed for either voltage doubler or one end ground use (except where noted). When used in voltage doubler applications, the D.C. voltage will be approximately two times the peak secondary voltage and the maximum D.C. current from the doubler can be approximately 30% of the maximum secondary current (RMS) and depends on the value of the doubler capacitors. Units are designed for use under oil and for use in air up to 15KVP epoxy coated.
Primary: 115V-50/60 Hz.

POWER SUPPLIES

This 8 page catalog contains detailed specifications on Dynamic:

- **Standard Converters**
- **Chargers**
- **Power Supplies**

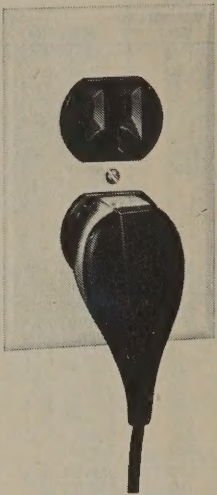
...in both wall plug-in and desk top configurations. Models shown can be ordered by part number...eliminating the need for special engineering charges.

The catalog covers Nickel Cadmium Chargers, AC/DC Converters and Lead Acid Chargers and contains:

- **Specifications**
- **Regulation Charts and Curves**
- **Outline Drawings**

All units are designed to meet or exceed requirements for UL and CSA listings. Available on request.

Designed to be listed under the U/L • CSA SPECIFICATIONS



Dynamic Instrument Corp. has designed, developed and patented a complete range of low-voltage, filtered, transistor-regulated power supplies and chargers designed to supply the necessary power to a vast variety of Electronic equipment.

Utilizing a wall plug-in type unit eliminates or greatly reduces the problems involved with UL listing your product. They also remove the major heat source, reduce size and weight, and also greatly increase your design flexibility. The latest design applications of the Dynamic wall plug-in supplies are in conjunction with such sophisticated equipment as mini-computers, calculators, keyboard logic circuits, and remote CRT Terminals.

Just call or write: Dept. WPX-1.

Dynamic's product range and capabilities also cover:

POWER CONVERSION

AC-AC for products requiring low-level AC voltage. AC-DC for small electric motor driven products that do not use batteries.

SECONDARY BATTERY CHARGING

Dynamic Chargers for charging Nickel-Cadmium; Lead-Acid and Manganese-Alkaline Batteries.

AC-DC CONVERSION/CHARGING

Dynamic Converter-Chargers providing rechargeability or instant use of battery operated products.

FAST CHARGING SYSTEMS

Dynamic design and production capability relative to Fast Charging Systems.

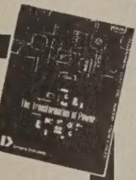
TRANSFORMERS

Internal, External and Wall-Mounted Dynamic Transformers.

SPECIALTY TRANSFORMERS

Dynamic Plug-In, Printed Circuit Transformers; Sub-Miniature Transformers; Ferro-resonant Transformers; Multi-Input Voltage and Multi-Output Voltage Transformers.

THE TRANSFORMATION OF POWER



A unique brochure explaining the many advantages and application possibilities of Dynamic's patented U/L listed transformers, converters, chargers and power supplies, technical data sheets and bulletins, are available on specific products. A request on your letterhead or phone our Sales Engineering Department WPX-1.

SPECIFICATIONS

DM SERIES

AC Input Power: 90-132VAC, 47-440Hz, 1 ∅

Hold-Up Time: 15 msec. minimum @ nominal line and full load. No loss of regulation.

Line Regulation: 0.4%, for 90-132VAC change

Load Regulation: 0.4%, No load to full load

Ripple and Noise: 0.2% RMS, 100mV Peak-Peak max.

Efficiency (Nominal Line): 70% minimum

Frequency of Operation: >20KHz. No audible noise

Temperature Coefficient: 0.03% per degree centigrade

Conduction Cooling: Standard

Operating Range: —20°C to +71°C @ mounting base

Convection Cooling: With optional heat sink

Operating Range: —20°C to +71°C (see graph for derating)

Storage Temperature: —55°C to +85°C

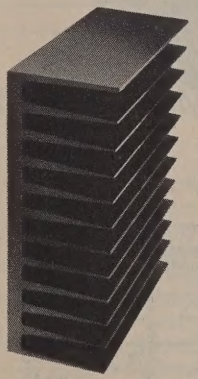
Overload Protection: Factory preset foldback current limiting circuitry. Recovery is automatic.

Overvoltage Protection: Factory preset crowbar OVP standard on every model

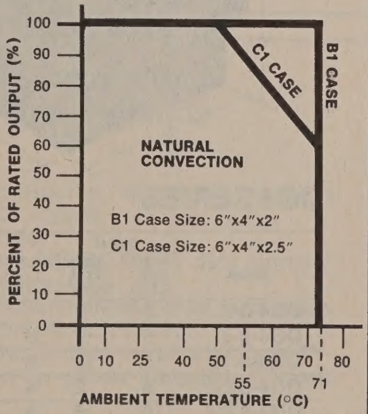
Voltage Adjustment: ±5% by screwdriver adjustment

Mounting: Available on two surfaces

OPTIONAL HEAT SINK



Heat Sink for use with B1 and C1 case. (Add 1.75" to dimension C)



Derating Curve for DM Series with Heat Sink

Optional heat sink is available for convection cooling. Heat sink attaches to base plate of DM Series power supply with four mounting screws. Fins must be vertically oriented for maximum cooling; a second mounting surface is provided for this purpose. See output current vs. ambient temperature curves for output derating characteristics of B1 and C1 case sizes. Heat sinks are made of 6063-T5 extruded aluminum alloy with black anodized finish. Specify Model HS-DM. Unit price is $9.00 for 1 to 9 pieces.

Consult factory for other outputs.

SPECIFICATIONS 301 Thru 901 SERIES AND "D" SERIES

Regulation Line: .01% +1 MV for line variation from 105 to 132VAC.

Regulation Load: .02% +1 MV from zero to full rated load.

Ripple: ½ millivolt RMS with plus or minus output terminal grounded, at 60 Hz and 115VAC line input.

Temperature Range, Operating: —20°C to +71°C continuous duty.

Temperature Range, Storage: —55°C to +85°C.

Input Voltage: 105 to 132VAC, 45 to 440 Hz. 210 to 264VAC, 45 to 440 Hz at no extra cost ("V" option).

Transient Recovery: Less than 50 microseconds.

Temperature Coefficient: .01% per degree centigrade.

Overload Protection: Automatic current limiting at 110% to 130% of rated current. Automatic recovery on removal of overload.

Remote Sensing: Standard feature.

Remote Voltage Adjustment: Standard feature. (Except 901 series)

Remote Programming: 100 ohms per volt. (Except 901 series)

Thermal Protection: Built-in thermostat on heat sink. (Except 901 series)

Relative Humidity: 75%.

Input and Output Connections: Heavy duty terminal block on rear of chassis.

Finish: Black anodized aluminum, black semi-gloss enamel Fed. Std. 595, Color 27038.

Paralleling Capability: Built-in for paralleling without modification to power supplies. (Except 901 series)

OPTIONS

AC Input Option: Add suffix "V". All units are available with 210 to 264VAC, 45 to 440 Hz at no extra charge.

Overvoltage Load Protection Option: Add suffix "L". Protects easily damaged loads from overvoltage transients.

High Humidity Option: Add suffix "H" for 95% relative humidity operation.

Fungus Proofing Operation: Add suffix "F". Treatment with MIL-V-1973 varnish protects circuits from fungus.

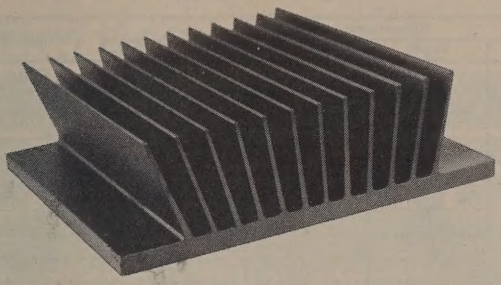
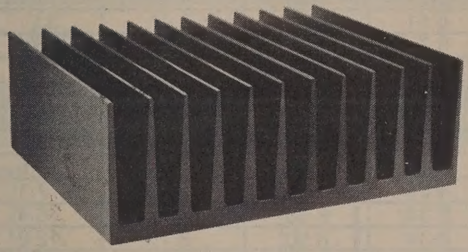
OPTIONAL HEAT SINKS

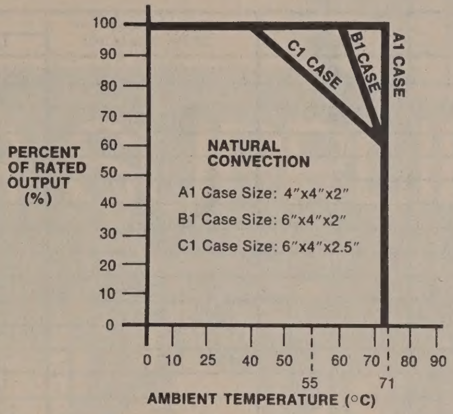


Heat Sink for use with A1 case.
(Add 1.2″ to dimension C)



Heat Sink for use with B1 and C1 case.
(Add 1.75″ to dimension C)

Derating Curve for DG4/DG6 Series with Heat Sink



Optional heat sinks are available for convection cooling. Heat sinks attach to base plates of DG4 or DG6 Series power supplies with four mounting screws. Fins must be vertically oriented for maximum cooling; a second mounting surface is provided for this purpose. See output current vs. ambient temperature curves for output derating characteristics of A1, B1, and C1 case sizes. Heat sinks are made of 6063-T5 extruded aluminum alloy with black anodized finish. Specify Model HS-DG. Unit price is $9.00 for 1 to 9 pieces.

E & DE SERIES

Dressen-Barnes presents a practical, low-cost, economical series of single and dual power supplies.

Functional, popular output features, simplicity in design, low-profile, reliability, 0.1% regulation with Dressen-Barnes engineering and quality craftsmanship.

Perforated cover available to comply with UL design requirements.

SPECIFICATIONS

Regulation: Line: .1% or 5MV, whichever is greater, for line variation from 105 to 125VAC.

Regulation: Load: .1% or 5MV, whichever is greater, from zero to full rated load.

Ripple: 3MV RMS over entire operating range.

Temperature Range: Operating: 0°C to +71°C continuous duty.

Temperature Range, Storage: —55°C to +85°C.

Input Voltage: 105-125/210-250VAC, 47-63 Hz.

Transient Recovery: Less than 100 microseconds.

Temperature Coefficient: .015% per degree centigrade.

Overload Protection: Automatic current limiting at 110% to 130% of rated current. Automatic recovery on removal of overload.

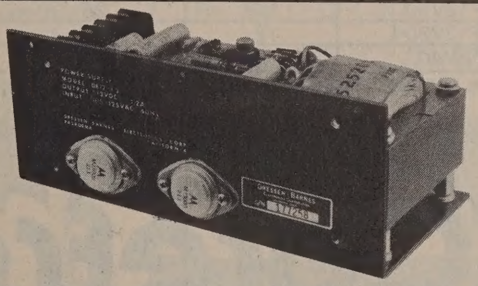
Remote Sensing: Standard feature.

Voltage Adjustment: Standard feature, ±5% by screwdriver.

Remote Programming: 100 ohms per volt.

Relative Humidity: 75%.

Input and Output Connections: Heavy duty terminal block.



Controls: DC output control . . . Simple screwdriver voltage adjustment over entire voltage range. Remote Sensing . . . Provision is made for remote sensing to eliminate effect of power output lead resistance on DC regulation.

Finish: Black anodized aluminum.

Mounting: Two surfaces, each with tapped mounting holes.

"Quality Power Supplies Since 1965"

Electrostatics, inc.

7718 CLAIREMONT MESA BLVD. • SAN DIEGO, CA 92111 • (714) 279-1414

How Ugly™ Can You Get?

Plenty. Ask Elexon. We'll show you standard dc supplies that will boggle your mind. Tickle your pocketbook. And fulfill your requirements, 90% of the time.

Sure, Elexon's Uglies are about as ugly as you can get. We make them that way. So you only have to pay for what you get. Performance. Reliability. Power. Not fancy panels and non-functioning frills.

Underneath their harsh exterior is a body that's met every test. Overload. Hi-temp. The worst-case line conditions that an Ugly™ is likely to ever get.

With the Uglies you've got your pick. 16 voltages. Multi currents. Varied inputs. Shapes and sizes for every requirement.

You've got custom capabilities, too. Our "Ugly" Computer actually designs while it cost estimates, within 30 minutes, from start to "quote."

If you're specifying modular dc supplies look to the Uglies, where the beauty's not just skin deep.

ELECTRONIC MEASUREMENTS

DC OUTPUT SCR REGULATED

On the next three pages you will find the industry's largest selection of DC output SCR regulated power supplies in the 500 watt to 60kw range. All units regulate voltage and current output to 0.1% and feature low ripple, high efficiency and reliability and the smallest package sizes available.

Turn Page for Specific Models→

FOR CUSTOM POWER SUPPLIES

If your requirements cannot be satisfied with standard E/M products we are eager to make modifications to meet specific applications. Standard units can have special panels, optional features or alternate packages. If you are an OEM a custom power supply may be required. Our design and production technology includes series pass, ferroresonant, switch mode and SCR phase control techniques. A prompt technical appraisal of your specification and a realistic quotation are only a letter or phone call away — if you give us the opportunity.

OTHER POWER PRODUCTS

E/M is also actively engaged in design and production of special purpose power sources. These include Arc lamp power supplies for krypton, xenon and mercury lamps, plasma arc power supplies, battery eliminators, open frame power supplies and switch mode power sources. Contact us for specific information and applications assistance in any of these areas.

ELECTRONIC MEASUREMENTS, INC.
405 ESSEX ROAD, NEPTUNE, N.J. 07753 201-922-9300 TOLL FREE 800-631-4298
Specialists in Power Conversion For 35 years.

DC output SCR regulated power supplies

FEATURES:

- Highest wattage per cubic inch in the industry
- High efficiency
- Constant-voltage or constant-current output, with automatic crossover
- Remote sensing and programming
- Series or parallel operation
- Master/slave operation (single-phase only)
- Circuit breaker or fuse protected
- Thermal overload protection
- Mode indicator lights (single-phase only)
- Rack or bench mount
- Optional over-voltage protection
- Optional input voltages
- Five-year warranty

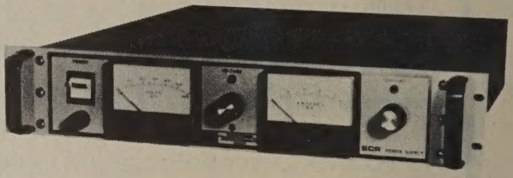
APPLICATIONS:

- CW lasers
- Pulse lasers
- Capacitor forming
- Focusing coils for accelerators
- Cryogenic magnet applications
- Electroplating
- Battery charging
- Aging racks for semiconductors and IC's
- Electronic memory systems
- General electronic applications

---

single phase SCR models

(500, 800, 1600, 2400 watts)



MAJOR SPECIFICATIONS:

AC input voltage: 500, 800 & 1600 W models — 105-130V, 47-63 Hz; 2400 W models — 190-253V, 47-63 Hz. Optional inputs available.

AC input current: 500 W—7.5A; 800 W—12A; 1600 W — 24A; 2400 W — 18A (220V).

DC output: regulation, voltage mode — 0.1%; regulation, current mode — 0.25%; stability — 0.05%, 8 hours; temperature coefficient — 0.02%/°C.

Size: 500 & 800 W models — 3½"H x 19"W x 18½"D (88mm x 483mm x 470mm); 1600 W models — 5¼"H x 19"W x 18½"D (133mm x 483mm x 470 mm); 2400 W models — 7"H x 19"W x 18½"D (177mm x 483mm x 470mm).

Specialists in Power Conversion Equipment

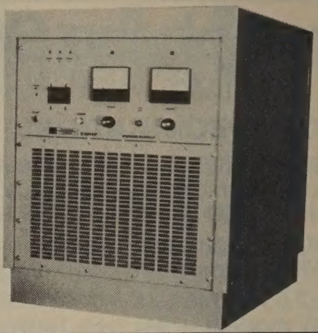
three phase EMHP models

(20, 30 & 60 kilowatts)



FEATURES:

- Low cost
- Reduced delivery time
- Greatly increased efficiency
- High performance

APPLICATIONS:

- Electromagnets
- Magnetic beam bending
- Cryogenic magnets
- Precision electroplating
- Electrochemical processes
- DC motor power
- Large relay systems
- High energy electronic systems
- High power illumination systems
- Thermodynamic and thermonuclear research
- Inverter power source
- Battery charging
- Industrial DC power

MAJOR SPECIFICATIONS:

AC input voltage: 460 VAC ±10%, 60 Hz. (Optional inputs available.)

DC output: regulation, 0.1%; stability, 0.05%.

Size: Series 15 (19″ panel) — 21.69″W x 26.62″H x 25.00″D (55.1mm x 67.6mm x 63.5mm); Series 25 (24″ panel) — 26.75″W x 32.00″H x 25.00″D (67.9mm x 81.3mm x 63.5mm); Series 40 (24″ panel) — 26.75″W x 47.62″H x 25.00″D (67.9mm x 130.9mm x 63.5mm).

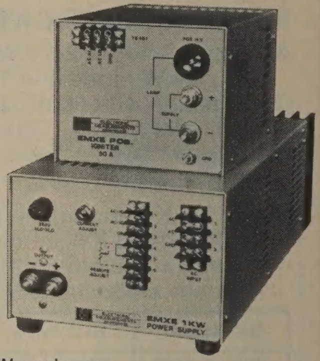
Arc Lamp Power Supplies (Xenon & Mercury — 35W to 1 KW)



FEATURES:

- Small size
- Light weight
- Flexible mounting
- High efficiency
- Low ripple (better than 1%)
- Excellent regulation (better than 1%)
- Low in-rush currents
- Long-term stability
- Remotely adjustable (500 W and 1000 W, standard; 200 W, optional)
- No audible noise
- Low energy starting
- Input surge protection
- Automatic starting
- Adjustable output
- Modulation capability (optional)

APPLICATIONS:

Optical Instrumentation:
Metallographs
Monochromators
Spectrophotometers
Fluorescent microscopes
Artificial aging equipment
Optical test stands
Laser pumping
Weathering & light fastness testers

Graphic Arts:
Integrated circuit manufacture
Color matching

Image Projection:
Slide projectors
Motion picture projectors
Contour projection
Photoelectric scanning
Railway identification systems

Medical:
Photo coagulators
Skin irradiation equipment

SPECIFICATIONS:

AC input: 100-130 VAC, 47-63 Hz. 200 W package, 2.5A; 500 W package, 8.4A; 1000 W package, 15A. (Optional inputs available.)

DC output: 200 W package, to 13A; 500 W package, to 27A; 1000 W package, to 55A. Ripple, less than 0.1% below 20 KHz.

DC-to-DC POWER SUPPLIES from Endicott Coil

Activate your information displays

When you must convert low DC line voltages to nominal 200 or 250 V DC levels to activate your information displays, ask us to recommend the DC-to-DC power supply that's right for your application.

Input: Standard inputs 5, 9, 12, 15 V DC (others up to 48 V DC)
Output: 200 V DC @ 15 MA.
Input/Output Isolation: 600 V RMS; 60 Hz. breakdown for 1 minute
Weight: 30 gms. (unregulated)
40 gms. (regulated)
Size: 1.1″ (27.94 mm) x 1.2″ (30.48 mm) x .910″ (23.11 mm) max. high (unregulated)
1.43″ (36.32 mm) x 1.5″ (38.10 mm) x 1.03″ (26.16 mm) max. high (regulated)
Mounting: Designed for PC mounting
Packaging: Plastic case, fully encapsulated

Although we develop our lightweight, compact DC-to-DC power supplies to activate "glow-type" information displays, our customers have demonstrated that this "big performer in a little package" has a host of other applications besides. Here are just some of them:

- Outputs to 1,500 V @ 1 MA. for portable oscilloscopes and photo-multiplier applications.
- Low wattage fluorescent tube power supply for battery operation (4 watt to 8 watt).
- High frequency AC excitation for remote sensors and transducers.
- Multiple DC and/or AC outputs from battery sources.
- Highly isolated power supplies for electromedical applications.

Specifications for E 900

Input: 12 V DC standard (5 V, 9 V, 15 V DC, and other inputs available to your specification)
Standard Outputs: Available with either single or dual outputs, capable of up to 12 watts total. Single: 250 V DC @ 30 MA. (45 MA. on special order). Dual: 250 V DC @ 30 MA., and -16 V DC @ up to 100 MA. to provide the -12 V DC needed for the drive electronics in many applications using the Burroughs SELF-SCAN® displays.
Input/Output Isolation: 600 V RMS (60 Hz. breakdown for 1 minute)
Weight: 122 gms.
Size: 2″ (50.8 mm) x 2.5″ (63.5 mm) x 1.12″ (28.4 mm)
Mounting: Designed for PC board mounting
Packaging: Aluminum case, acting as heat sink, may rise 10–15° C. above ambient temperature at full load; may be connected to ground to provide electrostatic shielding

- **Pin layout permits mounting on most standard motherboards.**
- **Lightweight and compact size of these power supplies keeps the equipment in which they are used easily portable.**
- **Models shown here are fully encapsulated.**

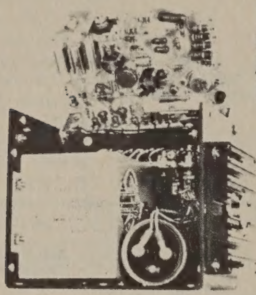
MIL SPEC MS Series

Repairable MS Series · Military Specifications SINGLE/DUAL OUTPUT DC Modular Power Supplies

MEETS COMPONENT, WORKMANSHIP AND ENVIRONMENTAL REQUIREMENTS OF MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200



75°C FREE AIR RATING

Transpac MS Series DC Power Modules are capable of meeting the highest military requirements. These units incorporate full MIL components where applicable and are designed to meet full military environmental and component specifications. Transformers are per MIL-T-27A, semiconductors are MIL-STD-701 or MIL-S-19500 preferred types. Tantalum foil capacitors per MIL-C-3965 are used throughout except in the filter sections of higher current types where MIL-C-62 military grade electrolytic capacitors are used. These units have been fully tested to meet the component, workmanship, and environmental requirements of MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200 and are supplied with an independent testing laboratory certification as to compliance for representative models.

CERTIFIED

Certificate of Conformity by Independent Laboratory supplied on request

Input: 103.5-126.5 VAC (standard) or 108-132 VAC (specify), 47-440 Hz

Ripple: Less than 800μv RMS except 50 through 310 VDC where ripple is less than 0.005% RMS

Line Regulation: Less than ±0.01% or 5 mv, whichever is greater, for full input change

Load Regulation: Less than 0.05% or 8 mv for 0-100% load change

Transient Response: Less than 50 μsec for step line or load change

Maximum Case Temperature: 115°C

Free Air Operating Temperature: −55°C to +75°C (full tantalum type up to 1 ampere most models) −40°C to +75°C (semitantalum type above 1 ampere) full ratings, no external heat sinking

Temperature Coefficient: Less than 0.01% per degree C or 3 mv

Long Term Stability: Within 10 mv or 0.1%, whichever is greater for 8 hours (line, load temperature constant)

Interconnection: Series or parellel operation

Voltage Adjustment: External screwdriver voltage control

Remote Voltage Control: Provision for external control of output voltage

Remote Sensing: Remote sensing facilities provided

Short Circuit Protection: Automatic short circuit protection and automatic recovery

Overvoltage Protection: Fixed 5 volt and dual output units add suffix (-O) to model number. For other MS units order model OV448M

Polarity: Ungrounded or + / − grounded

Transistor Types: MIL-STD-701 and MIL-S-19500

Military Specs: MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200 where applicable

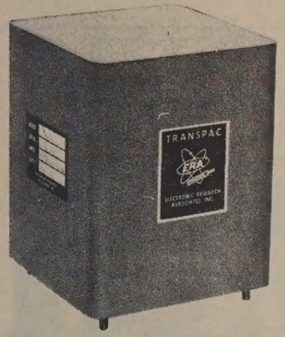
MTT Series

Technipower "PM95" Series Equivalents
FORM • FIT • FUNCTION
DC Modular Power Supplies

MEETS ENVIRONMENTAL REQUIREMENTS FOR "TYPE APPROVAL" OF MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200



DIRECT TECHNIPOWER REPLACEMENTS FOR "PM95" SERIES

ERA Transpac's "MTT" Series of Power Modules are designed to directly replace the Technipower "PM 95" Series...Form, Fit, and Function. The "MTT" Series allows OEM manufacturers a competitive alternate source for OEM or replacement.

Input: 105-125 VAC, 47-440 Hz

Ripple: 2mv RMS or .002%

Output Control Range: ±5%, screwdriver adjustment

Line Regulation: Less than 0.05% + 5mv for full input change

Load Regulation: Less than 0.05% + 5mv for 0-100% load change

Transient Response: Less than 50 microseconds for step line or load change

Remote Sensing: Facilities provided

Operating Temperature: -55°C to +95°C (Max. base Temp.)

Storage Temperature: -62°C to +105°C

Temperature Coefficient: 1mv/°C

Polarity: Ungrounded or +/- Grounded

Short Circuit Protection: Automatic protection with automatic recovery

Overvoltage protection: Optional

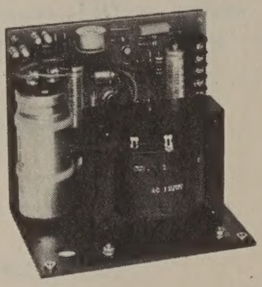
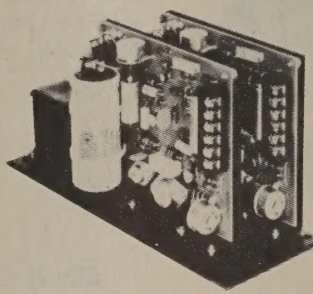
OE Series

"OEM" Open Frame DC Modular Power Supplies

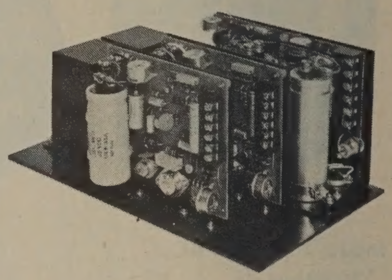
SINGLE OUTPUT



DUAL OUTPUT



TRIPLE OUTPUT



"OE" Series Power Supplies

"OE" series power supplies are highly regulated open frame DC power supplies which come complete with isolating input transformers, OVP protective circuitry and full heat sinking. These low cost units are available in either single or multiple outputs and are ideally suited for all OEM, IC, Op-Amp, Computer, and general applications.

The "OE" series are premium engineered and conservatively designed using top quality components including computer grade capacitors. The power modules are fully repairable and of conservative thermal design.

Input: 105-125 VAC, 47-63 Hz, 380-420 Hz, single phase

Output: Refer to Model Table

Adjustment Range: ±0.5 volt or ±5%, whichever is smaller

Input Regulation: Within 0.05% +5 mv for ±10% input change

Load Regulation: Within 0.05% +5 mv for 0 to 100% load change

Ripple: Less than 1.0 mv RMS

Temperature Range: −20°C to +71°C derated as follows: (Percent of rated load) +40°C/100%, +50°C/75%, +60°C/50%, +71°C/40%

Response Time: Less than 50 μsec for 10-100% load change

Overcurrent Protection: Built-in, fold-back type

Overvoltage Protection: Built-in, full adjustment range

Maximum Case Temperature: 120°C measured at power transistor base

Polarity: Ungrounded or +/− grounded

Line Derating: Input 47-53 Hz, derated by 10%

Logic Inhibit Circuitry: Provided

Remote Sensing: Terminals are provided to maintain regulation at the load

OPTIONS

AC Input: All models are available for 208 VAC input (Suffix "Y," or 230 VAC input Suffix "X")

Dual AC Input: Operation at either 115/230 VAC input can be provided. Use Suffix "Z"

CUSTOM DESIGNS

The unique "building block" characteristics of ERA TRANSPAC DC power supply assemblies provide a practical solution to economic custom designed power supplies. Standard off-the-shelf assemblies are used to provide a variety of single or multiple voltage and current outputs. These are packaged to meet the customers unique form factor and only the transformer and metal work are custom designed. The result is a proven reliable design with the high engineering and fabrication costs eliminated and available within a short delivery cycle.

Forward your specification requirements for our comments and fast quotation on a no obligation basis.

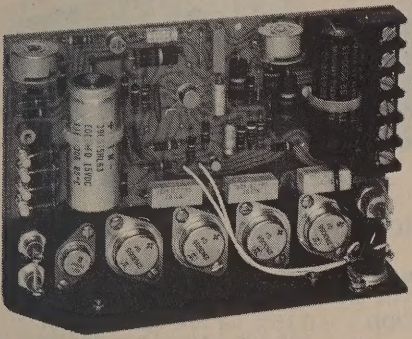
"R" Series

"Build or Buy" DC Regulator Power Supply Assemblies



The "R"-series units are complete regulator assemblies which provide highly regulated DC output when used in conjunction with an external AC input source. The three and six ampere models (R53 and R56 types) require only an input transformer for operation. The higher current types (R512 and R520) require in addition, an input filter capacitance. Refer to "Application Notes" for recommended AC input, heat sinking, and other data.

Input: AC center tapped, ±10% nominal, 47-63 hz, 380-420 hz. Refer to "Application Notes" for specific values.
Output Voltage: Nominal 4.7-30 VDC depending on Model Types. Refer to Model Chart.
Output Current: 1.2-20 amperes depending on model type and heat sinking. Refer to Model Chart and "Application Notes."
Input Regulation: Within 0.05% + 5mV for ±10% input change.
Load Regulation: Within 0.05% + 5mV for 0 to 100% load change.
Ripple: Less than 1.0mV RMS.
Remote Sensing: Provided

Temperature Range: -20°C to +71°C derated as follows: (Percent of rated load) +40°C/100% +50°C/75%, +60°C/50%, +71°C/40%.
Temperature Coefficient: 0.01% + 1mv/per°C.
Response Time: Less than 50 sec for 10-100% load change.
Overcurrent Protection: Built-in, fold-back type.
Overvoltage Protection: Built-in, full adjustment range.
Maximum Case Temperature: 120°C measured at power transistor base.
Polarity: Ungrounded or +/- Grounded.
Weight: See listing under Case Size.
Line Derating: Input 47-53hz, derate by 10%.
Logic Inhibit Circuitry: Provided

COMPLETE WITH:

- ☐ Power Rectifiers
- ☐ Input Filter*
- ☐ IC Regulator
- ☐ Power Transistors
- ☐ Regulator Components
- ☐ Logic Inhibit
- ☐ Adjust Controls
- ☐ Input/Output Terminations
- ☐ Mounting Facilities
- ☐ Over-Voltage Protector
- ☐ Over-Current Protector
- ☐ Thermal Protection†

* Provided on R53 and R56 Models
† Provided on R512 and R520 Models

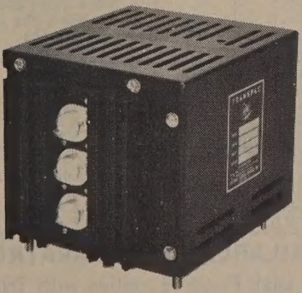
Solid-State Sinusoidal AC Regulators



Transpac RT modular AC regulators are all solid-state designs for incorporation into equipment or for external and bench use. Utilizes a unique design approach incorporating a modulated AC bridge which is referenced to variations in the output level. This special circuitry permits fast-acting RMS regulation independent of input frequency, and provides sinusoidal output. RT units are highly efficient, require minimum no-load current and operate over a wide range of load power factors.

- Provide highly RMS-regulated sinusoidal output
- Operate over a wide range of AC inputs and frequencies
- Run cool and quiet with no distorted magnetic field interference
- Operate over a wide range of leading or lagging power factors
- Provide a modular AC Regulator for end-equipment or bench use

Power Rating	Size (Inches)	Weight	Model
250 VA	$6\frac{5}{16}$ x $7\frac{1}{4}$ x $4\frac{7}{8}$	13 lbs.	RT250
500 VA	$6\frac{7}{8}$ x $8\frac{7}{8}$ x $7\frac{1}{2}$	28 lbs.	RT500
1000 VA	$7\frac{13}{16}$ x $9\frac{15}{16}$ x $7\frac{5}{8}$	43 lbs.	RT1000

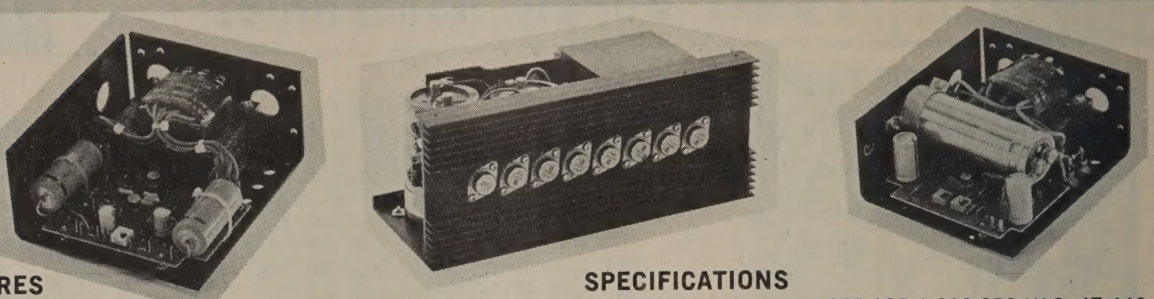
FARATRON

OPEN FRAME SINGLE OUTPUT POWER SUPPLIES



FEATURES

- U.L. recognized
- Open frame construction using heavy gauge anodized aluminum
- 3 surface mounting on B, C and D cases
- 36 different outputs available from five basic case sizes
- 6 different voltages available in each basic case size
- Integrated circuit regulators
- Sockets used in most models for power transistors
- Quick disconnect terminals used on B, C and D models for input/output connection
- Non-breakable barrier strip used for input/output connections on E and F cases

OPTIONS

OVERVOLTAGE PROTECTION:

a) FIXED — Factory preset at 120%, ±10% of nominal voltage, add suffix M1

b) VARIABLE — Add suffix M2

SPECIFICATIONS

AC INPUT	105-125 / 210-250 VAC, 47-440 Hz
OUTPUT RATING	Refer to chart for output rating of individual units
LINE REGULATION	0.15% for line variations of 105-125 VAC or 210-250 VAC
LOAD REGULATION	0.15% for 100% load changes
RIPPLE AND NOISE	1.5 mv RMS, 5 mv pk-pk with either negative or positive terminal grounded
VOLTAGE ADJUSTMENT	±5% minimum
OVERLOAD PROTECTION	Foldback circuit protects circuitry against overload and short circuit conditions. Recovery is instantaneous upon removal of external malfunction. Factory pre-set at 130-140% of 45°C rating.
OPERATING TEMP.	Full load rating at 45°C.
STORAGE TEMP.	−20°C to +85°C
TEMP. COEFFICIENT	±0.02% per degree centigrade
REMOTE SENSING	Remote sensing terminals are provided on all models

DUAL OUTPUT MODULES

INPUT VOLTAGE — 115 volts A.C.

These modules furnish two matched output voltages from independent units. Current shown is available from each tap.

683 BROADWAY ▪ NEW YORK, N. Y. 10012 ▪ PHONE 212-254-5810

GATES

A single source for all possible types of "brute force" and regulated power supplies that can fill 90% of your design and application needs. Gates Power Supplies give you absolutely lowest cost and long life. The units are excellently constructed of high rated components for trouble free, years of service.
Silicon or Selenium. Single and three-phase units. 1 to unlimited Volts, 1 to unlimited Amps. Metered and unmetered Static or variable outputs. Rack, cabinet or chassis mounts. Unit or hundred quantities 48 hour delivery. Two year guarantees. Power Supplies for OEM Application, Testing Prototype, Lab Type Units, Plating, Motor Control, Cathode Protection, Transistor Power, Anodizing, Battery Charging, Battery Conversions, Marine Types, Aircraft Starting.

ECONOMY RANGE DC POWER SUPPLIES

Less Than 1% Ripple, Good Regulation, Rack Mount Type, Heavy Duty Construction, Powerstat, Fused 2% Meters, 115 VAC Input.

NOBRUSH® FREQUENCY GEORATOR CORPORATION

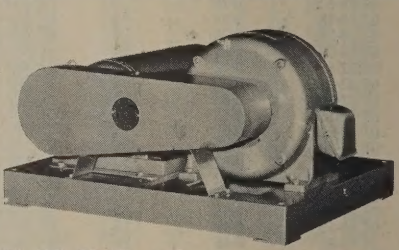
Celebrating our 25th anniversary

PERMANENT MAGNET GENERATOR DESIGN

"NoBrush" Motor Generators and Frequency Converters are efficient, compact, dependable, quiet running units for powering all types of electronic systems and electrical equipment. The heart of each "NoBrush" power system is a "NoBrush" permanent magnet generator which features a cast aluminum rotor designed to give superior voltage stability. • A typical "NoBrush" generator is mounted with a high quality induction or synduction motor within a single aluminum alloy shell. • Oversize pre-lubricated ball bearings sealed for life, coupled with the absence of brushes, commutators or slip rings, insure long-term maintenance-free operation. • Georator brushless permanent magnet generators are noted for their compact construction, ruggedness, ability to withstand short circuits, and excellent wave form. • All Georator power systems whether utilized for frequency conversion or basic power requirements, provide true "line isolation and stabilization" for protecting sensitive electronic systems from momentary power interruptions, switching transients, brown outs, or voltage spikes.

PERMANENT MAGNET FEATURES:

- ☐ *Line Isolation and Stabilization*
- ☐ *Stable Output Voltage*
- ☐ *High Overload Capacity*
- ☐ *Withstands Short Circuits*
- ☐ *Extremely Low R. F. Noise*
- ☐ *Minimum Maintenance*
- ☐ *Lightweight*
- ☐ *Low Audible Noise*
- ☐ *Cool Operation*
- ☐ *Operates in Adverse Environments*



50 TO 60 Hz and 60 TO 50 Hz FREQUENCY CONVERTERS

These ruggedly built, belt driven, motor-generator sets are mounted on a sturdy steel frame base. Units in the 0.5 to 5 KVA power range are designed around the highly efficient NoBrush Permanent Magnet Generator. Units in the 6.25 to 25 KVA power range have brushless rotating rectifier type generators with voltage regulators, to provide ±1% output voltage regulation. These motor-generators provide frequency conversion, basic power, and superior line isolation and stabilization for exported and imported electrical and electronic equipment.

50 to 60 Hz

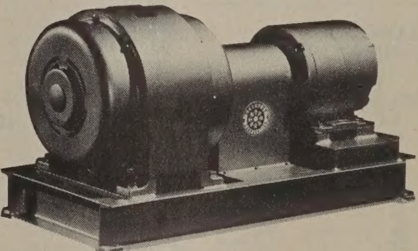
60 TO 60 Hz LINE ISOLATOR SERIES 30 UNIT SHELL

This small isolator stabilizer Motor-Generator offers full line isolation for small power requirements up to 1 KVA. Permanent magnet field generator coupled with the high inertia of the rotating system assures maximum electrical isolation between line and load. The rugged unit shell construction gives long, maintenance-free operation.

Model No.	KVA Rating	Phase In/Out	Output Voltage	Input Voltage	Dimensions H"/L"/Weight
35-118	0.35	1/1	115/230	115/230	14.5"/14.0"/110 lbs.
30-194	0.5	3/1	115/230	230/460	14.8"/16.1"/120 lbs.
30-198	0.5	1/1	115/230	115/230	14.8"/16.1"/120 lbs.
30-195	1.0	3/3	120/208	230/460	14.8"/16.1"/130 lbs.
30-199	1.0	1/3	120/208	115/230	14.8"/16.1"/130 lbs.

These 60 to 60 Hz brushless generators, including those in the next column are designed to accept long term input variation of up to ±15% from nominal with no change in output. Inertia stabilization allows these units to absorb input line transients of as much as 30% for as long as 500 milliseconds with less than 1% change in output.



60 TO 60 Hz ISOLATOR STABILIZER SERIES 37 IN LINE

Larger Motor Generators in ratings up to 25 KVA are also available to provide full line isolation and distortion free power to protect electronic equipment from power line excursions and momentary power loss.

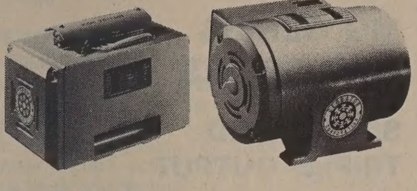
Series 37 Data Sheets containing detailed specifications are available upon request.

CONVERTERS & GENERATORS

The simplest, most rugged, most dependable power source.



60 TO 400 Hz FREQUENCY CONVERTERS SERIES 30 UNIT SHELL

A highly compact, brushless, Motor Generator Set for conversion of 50 or 60 Hz power to 400 Hz or higher frequencies. Generator and Motor Rotors are pressed on a common shaft, with shielded ball bearing at ends of shaft, all contained within an aluminum alloy shell.

Model No.	KVA Rating	Phase In/Out	Output Voltages Full Load *	Input Voltage **	Dimensions H"/L"/Weight

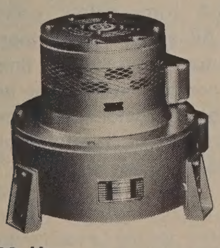
30-029	2.5	3/3	115/200	208-220/440	12¼"/15¼"/153 lbs.

☐ Other Generator Outputs Available: 120, 180, 280, 360, and 840 Hz

☐ Other Standard and Non-Standard Voltages.

☐ Exact 400 Hz Output.

☐ DC Outputs at Low or High Voltage.



60 TO 400 Hz FREQUENCY CONVERTER SERIES 33 VERTICAL

High quality induction motor is close coupled to a famous "NoBrush" generator for a really outstanding unit. Very compact, with high power to weight and size ratio. Available variations include: 50 Hz Input; Standard and Non-Standard AC output voltages; DC outputs at low or high voltage; and other output frequencies.

Model No.	KVA Rating	Phase In/Out	Dimensions Diameter	Height	Weight
33-001	2.5	3/1	20.5"	18.3"	173 lbs.
33-002	3.5	3/1	20.5"	18.3"	178 lbs.

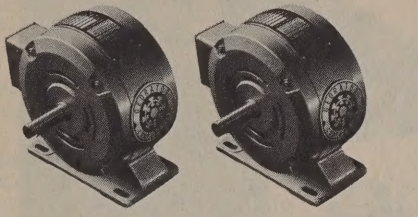
33-102	15.0	3/3	24.0"	24.2"	485 lbs.
30-120	25.0	3/3	23.0"	26.5"	1,213 lbs.



ALTERNATORS PERMANENT MAGNET

The original, revolutionary, "NoBrush" generator. Permanent magnets yield stability, reproducibility, ruggedness and virtually zero R.F. noise. Available in large variety of ratings, frequencies and voltages. Supplementary windings with rectifiers available for D.C. output.

400 Hz ALTERNATORS

Model No.	KVA Rating	Phase Out	Speed RPM	Dimensions H"/L"/Weight
36-001	0.25	1	3428	8¼"/4 1/16"/17 lbs.
36-003	0.5	1	3428	8¼"/4 1/16"/22 lbs.
36-030	0.5	3	3428	8¼"/4 1/16"/21½ lbs.
36-006	1.0	1	1714	12 3/16"/4 9/16"/35½ lbs.
36-007	1.0	3	1714	13 3/16"/4 9/16"/35½ lbs.
36-008	2.0	3	1714	13 3/16"/4 9/16"/45 lbs.
36-009	2.5	1	1714	17¼"/6¾"/105 lbs.
36-010	5.0	1	1714	17¼"/6¾"/137 lbs.
36-011	5.0	3	1714	17¼"/6¾"/103½ lbs.
36-012	7.5	3	1714	17¼"/6¾"/120 lbs.
36-013	10.0	3	1714	17¼"/6¾"/135 lbs.
36-151	15.0	3	1714	25"/11.2"/310 lbs.
36-152	25.0	3	1714	25.3"/17"/730 lbs.

☐ Alternator Frequencies Available Include:
50, 60, 120, 180, 240, 300, 360, 420, 840 Hz.

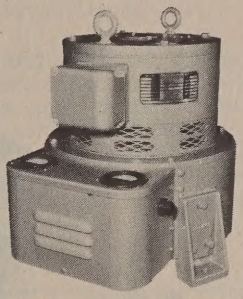
☐ All Units are Available with:
- Standard and Non-Standard AC Voltages.
- Multiple DC Outputs/Low Voltage taps.
- Special Housings for Flange Mountings.

☐ Separate ROTORS and STATORS can be provided for OEM Applications.

☐ Permanent Magnet Alternators for: Pilot Excitors—Field Flashing—Tachometers—Control Applications—Aircraft.

LIGHTWEIGHT 400 Hz ENGINE-GENERATORS

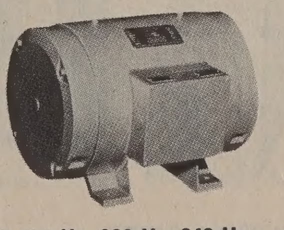
Lightweight portable 400 Hz permanent magnet engine generators are available with 1 φ or 3 φ outputs from 0.5 KVA to 2.0 KVA. Choice of outputs include 400 Hz, or combination of AC and DC output, or entire output rectified to single or dual DC output.



VOLTAGE REGULATED 60 TO 400 Hz FREQUENCY CONVERTERS

This new, Series 39, Regulated, Vertical Frequency Converter combines the "NoBrush" permanent magnet generator together with control windings and simplified sensing electronics, to provide both the traditional "Brushless" rugged design and a closely regulated 400 Hz power system. Voltage regulation is ± 1.5% no load to full load, 0.8 to 1.0 power factor, with a voltage adjustment feature of ± 5%.

Model No.	KVA Rating	Voltage Output	Voltage Regulation	Phase In/Out
39-001	5	120/208	± 1.5%	3/3
39-002	5	115/230	± 1.5%	3/1



60 TO 180 Hz, 360 Hz, 840 Hz FREQUENCY CONVERTERS FOR HIGH FREQUENCY TOOLS, MOTORS, AND LIGHTING

These frequency converters are available for powering high frequency metal-working tools, wood-working tools, motors, and lighting systems. The highly dependable, minimum maintenance, PERMANENT MAGNET BRUSHLESS DESIGNS are available in many ratings up to: 5 KVA for 180 Hz applications; 10 KVA for 360 Hz applications; and 30 KVA for 840 Hz applications.

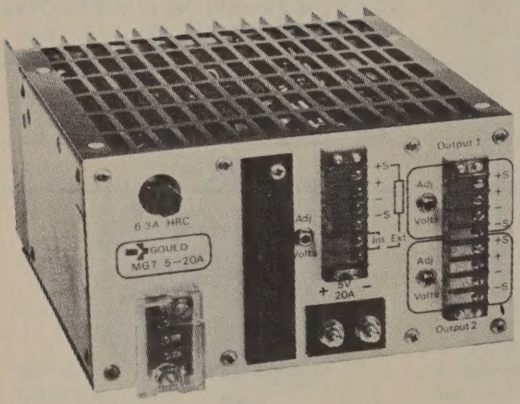
MG SERIES SINGLE OUTPUT SHOWN IS MG5-10 MODEL



MGT5-20A TRIPLE OUTPUT

SELECTION GUIDE

Model Number	Input	Output		Dimensions, inches			Weight lbs.	Unit List Price
		Volts DC	Amps	X max.	Y max.	Z max.		
SINGLE OUTPUT								
MG5-10	Note 1	5V	10A	2.8	6.5	3.5	2.7	**$250**
MG5-20A	115VAC +10% −20% 45-440Hz Note 3	5V	20A	4.2	6.5	3.5	4.4	**$295**
MG5-40A		5V	40A	6.4	7.0	3.5	7.5	**$360**
MG5-60A		5V	60A	8.5	7.0	3.5	10.0	**$485**
MG12-8A		12V	8A	4.2	6.5	3.5	4.4	**$295**
MG15-8A		15V	8A	4.2	6.5	3.5	4.4	**$295**
MG15-14A		15V	14A	6.4	7.0	3.5	7.5	**$320**
MG24-4A		24V	4A	4.2	6.5	3.5	4.4	**$295**
MG24-8A		24V	8A	6.4	7.0	3.5	7.5	**$320**
TRIPLE OUTPUT								
MGT5-20A	115VAC +10% −20% 45-440Hz Note 3	5V ±15V (±12V Note 2	20A 1.75A 1.75A)	6.4	7.0	3.5	7.5	**$400**

Note 1: Factory set for 115VAC +10 −20% 45-440Hz but can be **field adjusted** for 220VAC.
Note 2: 12 volt option must be specified on original order. Factory set. **Not** field adjustable.
Note 3: 220/240VAC can be supplied on order.

MG SERIES
MGT SERIES

SINGLE AND TRIPLE OUTPUT

- ☐ SMALL
- ☐ LIGHTWEIGHT
- ☐ HIGHLY EFFICIENT
- ☐ LOW COST

MG Series of switching regulator power supplies offer greatly reduced size and considerably higher efficiencies than conventional linear power supplies. In a conventional power supply much of the volume is occupied by the voltage transformer and heatsinks of the series elements. The power supply becomes much smaller and more efficient if these can be eliminated.

In the MG Series this is achieved by rectifying the input voltage directly and replacing the series element by a Pulse Width Modulated inverter circuit. Isolation is maintained by the use of a screened transformer in the inverter stage and efficiency is further improved by the use of high performance diodes as the final rectifying elements.

MGT5-20A triple-output power supply delivers 5V at 20A and either ±15V or ±12V outputs at 1.75A via linear regulators. In common with other units in the MG Range it provides significant advantages of size, weight and efficiency over conventional linear supplies.

ENVIRONMENTAL SPECIFICATIONS

TEMPERATURE RANGE

−10°C to +70°C ambient — derating on all outputs from 50°C at 2½%/°C.

TEMPERATURE COEFFICIENT

±0.01% per degree Centigrade.

POWER DENSITIES

Units have power densities in excess of 1 Watt/Cu. Inch. The power supply is convection cooled and under normal operating conditions does not require forced air cooling. The unit should be mounted to allow the free passage of air through the unit in a vertical direction.

GOULD

Gould Inc., Instrument Systems Div.
Power Supply Dept., 3631 Perkins Ave.
Cleveland, Ohio 44114 (216) 361-3315

FEATURES

ADJUSTABLE OUTPUT

Front panel potentiometer adjusts output voltage ±5%.

REMOTE SENSING

Available from front panel. Voltage drop in the output leads should not exceed 0.5V total. The remote sensing terminals are situated on the 6-way terminal block on the front panel. To operate the unit under remote sensing conditions remove the links connecting +S to + and −S to −, and connect +S and −S to the point at which the regulated voltage is required.

REMOTE PROGRAMMING (MG Series Only)

Output voltage may be programmed from 1V upwards by insertion of a programming resistor on front panel. Programming resistance 1000 Ω/V. ±0.5%.

REMOTE SWITCH-OFF (MG Series Only)

Output may be reduced to zero by connecting short-circuit between 1 and 6 of program terminal block.

SERIES AND PARALLEL OPERATION

For the **MG** Series there is no limit on paralleled output operation. Series operation is permissible for all units up to a maximum total voltage of 250VDC. **MGT** Series outputs can be connected in series or in parallel with limitations. Consult factory for details.

PERFORMANCE CHARACTERISTICS

OUTPUT VOLTAGE REGULATION

Main output 0.1% maximum for worst case combination of 0-100% load change on all outputs and ±10% line change.

Auxiliary outputs MGT Series 0.01% maximum for worst case combinations of 0-100% load change on all outputs and ±10% line change.

OUTPUT IMPEDANCE

Main output 100m Ω @ 100KHz.

Auxiliary outputs MGT Series 250m Ω @ 100KHz.

RIPPLE

Voltage output 10mV RMS, 50mV P-P max. (30MHz bandwidth).

Auxiliary outputs MGT Series 3mV RMS, 20mV P-P max. (30MHz bandwidth).

SWITCH-ON TIME

Outputs will reach specification within 4 cycles.

TRANSIENT RESPONSE

MG Series

For step load changes of 10-100% or 100-10%, output voltage returns to within the regulation band in approximately 1mS.

MGT Series

Main output For step load changes of 10-100% or 100-10% voltage deviations are typically 400mV and output voltage returns to within the regulation band in band within 2.5 mS.

Auxiliary outputs For step load changes of 10-100% or 100-10%, output will recover to within 10mV of the regulation band within 100 μs.

Interaction For a step current reduction on the main output in excess of 50% of the starting current, e.g. 10A to 5A or 20A to 10A, a negative transient deviation from specification may be experienced on the auxiliary outputs under worst case conditions of output setting, voltage input and output loads.

OVERLOAD PROTECTION

MG Series

Constant current, set at 110% ±5% full load.

MGT Series

Constant current on all three outputs, set to 110% ±5% of full load. Auto-Reset thermostat protects auxiliary outputs against prolonged short circuit but does not affect main voltage output.

OVERVOLTAGE PROTECTION

MG Series

Output shut down if voltage of output exceeds —

6.5V on the 5V units.
15V on the 12V units.
28.8V on the 24V units.

MGT Series

All outputs shut down if voltage of main output exceeds 120% - 130%. No protection for auxiliary outputs.

OUTPUT HOLD-UP

MG and MGT Series

Output maintained for the duration of a missing cycle at maximum output current and −10% when the unit is operating at up to 105% output voltage rating.

MGT Series

Output maintained for the duration of a missing cycle at maximum output current and −10% input when the unit is supplying 5.25VDC @ 20 Amps and 2 X 15.5VDC @ 1.75 Amps.

EFFICIENCY

In excess of 60%. Typically 75% for **MG** Series and 65% for the **MGT** Series.

MECHANICAL SPECIFICATIONS

MOUNTING

Mounting is to tapped holes in frame. Mounting screws, washers, spare fuses, output terminal nuts and terminal block lugs are supplied with each unit.

Units may be mounted from base or one side. If necessary units may be mounted from other side or from above in the inverted position without limitation. Note that lefthand mounting is standard except for **MG5-60** which is righthand mounted.

Mounting holes in your chassis should be drilled to .138 inch

INSULATION

Between AC input and output terminals and case connected together tested to 2.1KV peak for one minute.

Between DC output and case (and also between any two DC outputs, **MGT** Series) ±250VDC continuous, tested to ±500VDC for one minute.

INPUT/OUTPUT CONNECTIONS

Input connections are to enclosed terminals on front panel. Output connections (main for **MGT** Series) are to large studs on front panel except for **MG5-10** whose connections are on front mounted terminal strip.

Auxiliary outputs for **MGT** Series are from front panel terminal strip.

HIPOTRONICS

High Voltage DC Power Supplies

Model 8120-8 120kV — 8 mA HV DC Power Supply

Hipotronics offers a full line of unregulated power supplies with output voltages ranging from 1 to 1,000 kV and current outputs from 1.3 mA to 50 A.

Conservatively designed for continuous use, every model is supplied with a fully instrumented control console. The type of transformer insulation varies according to the voltage requirements. All units below 30 kV are air insulated while oil insulation is provided for higher voltages.

A complete overload system with surge devices protects the control circuitry against repeated short circuits at full output and ensures safe, trouble free operation.

Design Features

- Reversible polarity
- Output-connected, triple-range voltage meter
- Triple-range current meter in return leg of HV circuit
- Adjustable overload relay, 10% to 110% rated current, with reset button
- Rated current available from zero to rated voltage
- Meter recalibration potentiometers

Customized Capability

Hipotronics has designed and custom-manufactured a wide variety of power supplies for a wide variety of uses. Customized power supplies include application-oriented units for: Electrostatics, accelerators, lasers, high power radar, high voltage component testing, and many more.

Personnel Safety Features

- Output shorting solenoid and/or bleeder resistor
- Series-limiting resistor in output circuit
- External interlock provision and pilot light
- Zero start interlock and pilot light

Equipment Safety Features

- Surge protection for meters and relays
- Backup circuit breaker in primary of HV transformer
- Input circuit breakers and pilot light

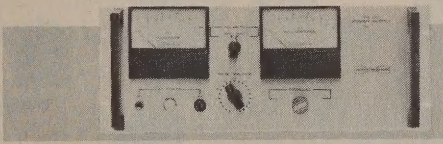
8600-83	83	600	
8750-67	67	750	
81000-50	50	1000	

Regulation: 10% 3 phase, 18% 1 phase, no load to full load.
Ripple: 1% or 5% rms, 3 phase units; 2% rms, 1 phase units (see chart).
HV Output: Cable to 600 kV; Toroid over 600 kV.

Metered Power Packs

The R Series consists of eight metered DC high voltage power packs with output voltages from 2.5 to 60 kV and a current rating of 5 mA on all models except the R60 A which has a 2.5 mA rating.

These compact, highly miniaturized units are designed for long life and trouble free operation. All units are housed in hermetically sealed cans, and are filled with mineral type transformer oil or epoxy. The conservative design precludes component failure caused by long term corona degradation of the insulation and guarantees a pure DC output free of interfering high frequency signals which might possibly influence or affect the system which it is powering.



MODEL R20B,
20 kV-5 mA
HV SUPPLY

Specifications

Input: 0-125 volts, output voltages and currents (stated for nominal 117 volt input)

Regulation: 10 to 15% no load to full load

Ripple: 0.5% rms per milliampere output

Model No.	Output (kV)	Current (mA)	(% rms/mA) Ripple	Polarity	kV Meter (kV)	Current Meter (mA)	Size WxHxD (in.)
R2B	0-2.5	5	.5	Reversible	0-3	0-5	19x7x8
R5B	0-5	5	.5	Reversible	0-6	0-5	19x7x8
R10B	0-10	5	.5	Reversible	0-12	0-5	19x7x8
R15B	0-15	5	.5	Reversible	0-15	0-5	19x7x8
R20B	0-20	5	.5	Reversible	0-25	0-5	19x7x8
R30B	0-30	5	.5	Reversible	0-30	0-5	19x12x10
R50B	0-50	5	.5	Reversible	0-50	0-5	19x12x10
R60B	0-60	2.5	.5	Reversible	0-60	0-2.5	19x12x10

Optional Extras

1. Bench top cabinet
2. Short circuit limiter — ideal for capacitor charging, flocking, electrostatic operations, etc. Supply will short circuit on output and limit current to 5 mA

Standard HV Power Packs

A wide range of durable, lightweight power packs are available with outputs from 2.5 to 60 kV and current ratings from 2 to 10 mA. Solid state rectifiers ensure compactness and good regulation on every unit.

The output connections are high voltage ceramic bushings on Models 30 kV and below, and plug-in receptacles for coaxial cables on higher voltage units.

Every component in the supply is operated below its design rating and pre-assembly hipot tested at 1½ times its operating voltage.

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out…and the response is in…
IMMEDIATE AND OVERWHELMING
ACCEPTANCE

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGI NIE
DER

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/ source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

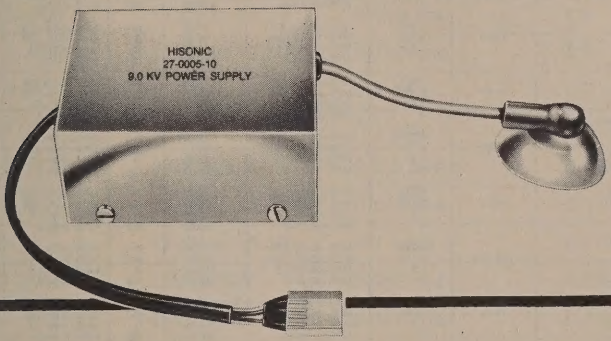
CUSTOM POWER SUPPLIES

DC To DC Or DC To AC

- Custom designed
- High reliability
- Operation temperatures up to 125°C
- High efficiency
- Low E.M.I.
- Wide variety of package configurations.
- Voltage regulators designed to meet customer requirements.

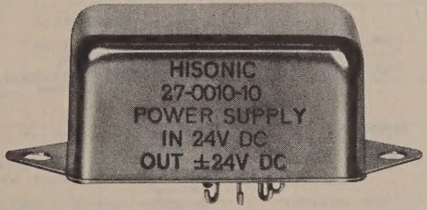


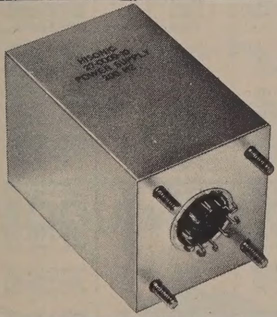
HIGH VOLTAGE DC TO DC POWER SUPPLY

DC Input: 23 V @ 240 ma
Outputs: 9 KV DC @ 60 ua
400 V DC @ 4 ma
12 V RMS (13 KHZ) @ 75 ma
Special characteristics: designed for operation @ 35,000 ft.
Physical size:
3.7" x 2.81" x 1.75" metal cased

LOW VOLTAGE DUAL OUTPUT DC TO DC POWER SUPPLY

DC Input: 24 V @ 350 ma
Outputs: +24 V @ 125 ma
−24 V @ 125 ma
Special characteristics: hermetically sealed.
Physical size: 2.125" x 1.25" x .875" metal cased





MULTI-OUTPUT DC TO AC POWER SUPPLY

DC Input: 28 V @ 2.5 a
Outputs: 30 V peak @ 270 ma
30 V peak @ 630 ma
30 V peak @ 1 ma w/ct
3.8 V peak @ 320 ma
Special characteristics: all outputs are 200 HZ square wave — hermetically sealed
Physical size: 3.125" x 2.312" x 2.06" metal cased
Output voltage(s) may be revised as long as the total power remains the same.

STANDARD EPOXY INCAPSULATED DC TO DC POWER SUPPLIES

DC Input 12 V @ 150 ma

Part No's	Output
27-0011-11	±6 V DC @ 100 ma
-12	±10 V DC @ 60 ma
-13	±12 V DC @ 50 ma
-14	±18 V DC @ 32 ma
-15	±24 V DC @ 25 ma

Physical size: 1.65" x 1.3" x 1"

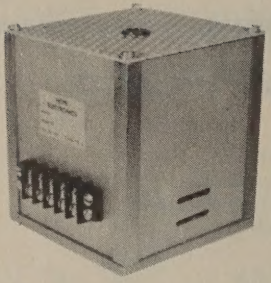
HOPE ELECTRONICS POWER SUPPLIES



MODEL MPS-.05-

Input	115V AC 10% 50 to 400 cps
Output	See specific model listing
Regulation	LINE .05% or 3 mv (whichever is greater) for 10% line change LOAD .05% or 3 mv (whichever is greater) for 0 to full load
Ripple	Less than .002% or 1 mv peak to peak (whichever is greater)
Overload Protection	Solid state short circuit and overload protected, instantaneous recover and automatic reset
Output Adjustment	See specific model listing. Wider ranges available as specials
Remote Sensing	Standard
Polarity	May be either positive or negative. Output floating (up to 300 volts)
Temperature Coefficient	Less than .015% °C or lmv/°C whichever is greater
Operating Temperature	20′C to 71° (maximum base temperature)

MODEL MPS-.5-

Input	115V AC 10% 50 to 400 cps
Output	See specific model listing
Regulation	LINE .5% for 10% line change LOAD .5% for 0 to full load
Ripple	Less than .01% or 2 mv peak to peak (whichever is greater)
Overload Protection	Solid state short circuit and overload protected, instantaneous recover and automatic reset
Output Adjustment	See specific model listing. Wider ranges available as specials
Remote Sensing	Available as option
Polarity	May be either positive, or negative. Output floating (up to 300 volts)
Temperature Coefficient	Less than .05%′C or 5mv/°C whichever is greater
Operating Temperature	20°C to 71°C (maximum base temperature)

COOLING

Some of these models may require additional cooling in the form of external heat sinks. Either of the following methods is acceptable, provided the power supply's mounting plate surface temperature is held below 80°C.

1. Bolted to chassis of equivalent thermal conductivity of a piece of aluminum ⅛" thick, 12" wide and 16" long. Thermal compound similar to Wakefield, Type 120 thermal joint compound should be used between power supply base plate and chassis.
2. Using Hope Electronics' heat sink (see list) bolted to power supply mounting plate, this model power supply may be operated up to 55°C ambient temperature without additional cooling. Thermal compound similar to Wakefield, Type 120 thermal joint compound should be used between power supply base plate and heat sink.
3. A blower may be used for cooling provided there is sufficient air flow to maintain the power supply mounting plate surface temperature below 80°C.

FEATURES

SILICON TRANSISTORS are used exclusively to insure continuous duty at full ratings.

SHORT CIRCUIT PROTECTION. The output may be short circuited without damage. A current limiting circuit reduces the output voltage when the full load rating is exceeded. The power supply automatically restores itself to normal operation after the short or overload is removed.

OVERTEMPERATURE PROTECTION. To prevent damage to supply, a thermal cutout shuts off AC power if a mounting base plate temperature of 100°C is exceeded. The cutout may be manually reset after unit cools.

OPTIONAL FEATURES

A. Various types of input and output connectors are available. Contact factory for price on type of connector you require.
B. 230V input
C. Overvoltage protection
D. Dual output models
E. External voltage adjustment
F. Wider temperature range models
G. Wider output adjustment 50%
H. Rack mounting

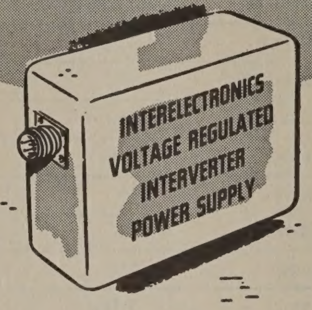
HOPE ELECTRONICS 20 NEWARK POMPTON TURNPIKE, WAYNE N.J. 07470 (201) 777-3522

PROVEN RELIABILITY—

DC-DC, DC-AC, SOLID-STATE POWER INVERTERS

over 260,000 logged hours— voltage-regulated, frequency-controlled, for missile, telemeter, ground-support, 135°C all-silicon units available now—



Interelectronics all-silicon thyratron-like gating elements and cubic-grain toroidal magnetic components convert DC to any desired number of AC or DC outputs from 1 to 10,000 watts.

Ultra-reliable in operation (over 260,000 logged hours), no moving parts, unharmed by shorting output or reversing input polarity. High conversion efficiency (to 92%, including voltage regulation by Interelectronics patented reflex high-efficiency magnetic amplifier circuitry).

Wide input voltage range (1 to 250 volts DC). Wide input voltage regulation (output voltage maintained with variations up to 50% in input voltage).

Light weight (to 6 watts/oz.), compact (to 8 watts/cu. in.), low ripple (to 0.01 mv. p-p), excellent voltage regulation (to 0.1%), precise frequency control (to 0.2%) with Interelectronics extreme environment magnetostrictive standards or to 0.0001% with fork or piezoelectric standards.

Complies with MIL specs. for shock (100G 11 misc.), acceleration (100G 15 min.), vibration (100G 5 to 5,000 cps.), temperature (to 150 degrees C), RF noise (I-26600).

AC single and polyphase units supply sine waveform output (to 2% harmonics), will deliver up to ten times rated line current into a short circuit to actuate MIL type magnetic circuit breakers or fuses, will start gyros and motors with starting current surges up to ten times normal operating line current.

Now in use in major missiles, powering telemeter transmitters, radar beacons, electronic equipment. Single and polyphase units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.

Interelectronics—first and most experienced in the solid-state power supply field produces its own all-silicon solid-state gating elements, all high flux density magnetic components, high temperature ultra-reliable film capacitors and components, has complete facilities and know how—has designed and delivered more working KVA than any other firm!

For complete engineering data, write Interelectronics today, or call (914) EL 8-8000 in Congers.

DC-DC CONVERTERS

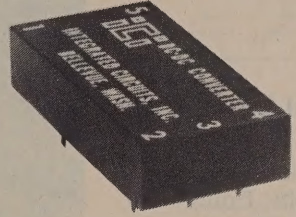
ENGINEERING AND DESIGN CAPABILITY

ICI's converters offer a unique combination of high power, high efficiency and low cost. Thick film micro-circuit processes permit the highest level of reliability and the smallest package size.

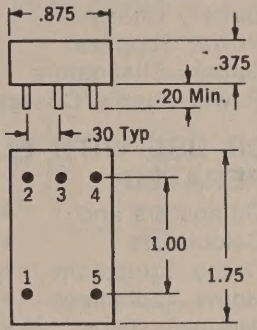
These versatile devices will operate over their full temperature range at their rated output power without the need of heat sinks or external components. Reflected line transients are reduced by a nonsaturating switching circuit which operates at a nominal frequency of 150 KHz ICI power converters feature:

- Input/Output Isolation: 100 MegΩ minimum at 500 VDC
- Package size of less than 0.6 cubic inches
- High efficiency of up to 83% of rated load
- Single and dual polarity outputs

Standard models are described below. Special versions are available in any single or dual output configuration from 5 to 50 VDC and in lower or higher output power.



OUTLINE DIMENSIONS



STANDARD CONVERTER MODELS AVAILABLE

MODEL NUMBER	INPUT VOLTAGE NOMINAL	INPUT VOLTAGE MAXIMUM	NOMINAL OUTPUT	OUTPUT POWER
DC-512	5 VDC	6.5 VDC	±12 VDC @ 180 mA	4.5W @ 85°C
DC-515	5 VDC	6.5 VDC	±15 VDC @ 150 mA	4.5W @ 85°C

POWER PLUG-IN ADAPTERS

- Transformers
- Battery Chargers
- Power Supplies
- Battery Eliminators
- Power Supply/Chargers.

FOR USE WITH ELECTRICALLY OPERATED:

- Computers and
- Calculators
- Office Equipment
- Home Appliances
- Alarm Systems
- Instruments
- Photographic Equipment
- Games and Toys
- Medical Appliances
- Gardening Appliances

The Jerome plug-in power units are primarily isolation step down transformers (fig. 1) making the products they operate safer to use.

Power supplies, battery chargers, battery eliminators, and combinations of these, include the isolation transformers plus rectifying and voltage regulating circuits (fig. 2 and 3).

Although many standard units are available, electrically most are engineered and designed to meet the specific requirements of the products they are to energize. Accessories can also be designed for special applications.

By using these plug-in units the designer has more flexibility and can simplify, enhance the appearance, and improve the portability of his product by not having to include a power supply in the product enclosure.

Other advantages:

- Power supply heat not included in product
- Easier maintenance of power source
- Reduction or elimination of the costly need to submit equipment for U.L. and CSA investigation.

MODELS PI-B, PI-D AND PI-E

These units come in attractive stylized molded cases to make them suitable accessories for any consumer, commercial or industrial product.

MECHANICAL FEATURES

- Model PI-B — cord set output (terminal plugs to specification)
- Model PI-D — screw terminal output
- Model PI-E (Same as PI-B except smaller case)
- Molded case — dual tapered surfaces for positive push-pull grip
- Case can be molded in a variety of colors and materials
- Hot leafed stamped logos or design enhance the case appearance.
- Designed for U.L. and C.S.A. listing

ELECTRICAL FEATURES

- Units available to supply voltage output up to 30 volts and currents up to 5 amperes.
- Isolated — low voltage operation of product.

GENERAL FOR ALL ADAPTERS

AVAILABLE AS:

- Transformers
- Power supplies
- Battery chargers for Ni-Cad, Lead Acid, Manganese-Alkaline and other batteries
- Battery eliminators

OTHER AVAILABLE FEATURES

- On and Off switch
- Pilot light
- Regulated output
- Fast Charge Circuits
- Cut off circuits
- And others to customer requirements.
- 240/120 switchable input

REGULATED DC TO DC POWER CONVERTERS

KGS ELECTRONICS manufactures a line of pulse width modulated converters that provide regulated DC voltage up to 10 amperes.

The converter transforms an unregulated DC input to a regulated fixed or adjustable DC output.

The Model LT Series are primarily designed to control the light intensity of incandescent bulbs in aircraft instrument lighting.

FEATURES

- State of art design for regulation and positive logic for output overvoltage and overload protection.
- All models are serviceable, small and lightweight (67 watts per pound and 3.4 watts per cubic inches typical for the Model LT-100).
- Operates over −55°C to +71°C case temperature.

MODEL LT-52A EXTERNAL CONNECTORS

Pin No.	Description	Remarks
A	+28 VDC Input	20 to 40 VDC
B	Common Ground	Input/Output Return
C	+5 VDC Output	Adjustable: 0 to 5 VDC
D	Remote Control	5K Ohm Rheostat to Gnd.
E	Spare

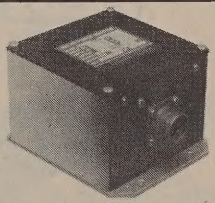
MOUNTING DETAIL

MODELS AVAILABLE

Model Specification	LT-52A	LT-70	LT-100	LT-53	LS-120	RB-125
Power, VA	50	70	100	50	120	140
Output, VDC	0 to 5 (1)	0 to 12 (1)	0 to 28 (1)	0 to 5 (2)	28	28
Output, ADC	10	5.8	3.6	10	4.0	5.0
Input, VDC	20 to 40	20 to 40	20 to 40	20 to 40	20 to 36	11 to 16
Regulation, %	1.5	1.5	1.5	1.5	2.0	2.0
Efficiency, %	71	78	84	71	85	86
Ripple, mvpp	25	25	25	25	50	50
Weight, lbs.	1.5	1.5	1.5	1.5	1.5	1.5
Size	2.25″ Width x 2.25″ Height x 5.75″ Depth					

NOTES: (1) External potentiometer adjusts the output voltage.
(2) External 0 to 28 VDC source controls the output voltage.

REGULATED POWER INVERTERS



Regulated DC to AC inverter, AC to AC frequency changers and UPS systems are available from KGS ELECTRONICS for the general aviation, industrial and consumer markets.

GENERAL DESCRIPTION

Model Specification	SPC-5 SPC-10	SPC-25	SPC-50	SPS-206	SPS-406	SPS-205	SPS-405	SPC-6-(3)
Power, VA	50 100	250	500	200	400	200	400	100 250 (3) 500
Output, VAC	115/26	115/26	115/26	115	115	115 230(2)	115 230(2)	115
Frequency, Hz	400	400	400	60	60	50	50	400
Distortion, %	5	5	5	7	7	7	7	7
Efficiency, %	72 typ	72 typ	72 typ	70 typ	70 typ	70 typ	70 typ	65 typ
Input	28 VDC power source(1)							115 VAC 60 Hz
Size	.9 to 1.7 VA/cubic inch @ 400 Hz .5 to 1.0 VA/cubic inch @ 50/60 Hz } depending on output power							
Weight	20 to 50 VA/lb. @ 400 Hz 7 to 23 VA/lb. @ 50/60 Hz } depending on output power							
Temperature	−65°F to +160°F operating							

NOTES: (1) 14 VDC input units are available in the Models SPC-5, SPC-10 and SPC-25.
Add -14 after the model number to indicate input voltage.
(2) Add -230 after model number to indicate 230 vac output voltage.
(3) Add -VA rating after SPC-6 to indicate desired output power.

For complete data, write KGS ELECTRONICS INC. today or call (213) 798-0786.

KEPCO power supplies

Power Supplies for the OEM, Power Supplies for the Laboratory. Power Supplies for the System Designer . . .

Kepco offers a broad spectrum of well made a-c to d-c and d-c to d-c voltage and current stabilizers employing various control techniques:

LINEAR: Series pass and shunt circuits.
FERRORESONANT: Modular & systems styles.
SWITCHING: 25 KHz modules for small size.

KEPCO also produces a variety of specialty Power Supplies.

UNIPOLAR OPERATIONAL: programmable power supplies responsive to analog controls, variable resistance and analog inputs (including an IEEE-488 compatible programmer).

UNIPOLAR OPERATIONAL — High Speed: programmable at substantially faster rates than the conventionally filtered models for application where the energy storage of an ordinary output capacitor is not desired.

BIPOLAR OPERATIONAL — High Speed: called "BOP", these power supplies are programmable in four quadrants (plus and minus voltage, plus and minus current, source and sink) going linearly through zero. BOP's function just like a power op-amp.

OEM MODULAR: these models, provided without meters or controls, are designed to be built right into your system. There are three different types catalogued below; Linear (series pass) Ferroresonant (saturating transformer) and Switching (25 KHz).

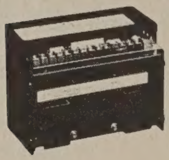
OEM MODULAR MODELS

LINEAR

Programmable voltage stabilizer, current limited.

PAT

20 WATTS



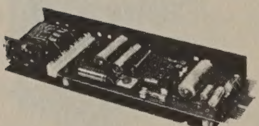
MODEL	VOLTS	AMPS
PAT 7–2	0–7	0–2
PAT 15–1.5	0–15	0–1.5
PAT 21–1	0–21	0–1
PAT 40–0.5	0–40	0–0.5
PAT 72–0.3	0–72	0–0.3
PAT 100–0.2	0–100	0–0.2

Suffix "E" (zeroing)
Suffix "R" (calibration)
Suffix "T" (0.005% per °C TC option)

Programmable voltage stabilizer, current limited.

PCX

20 WATTS



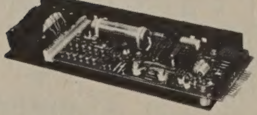
MODEL	VOLTS	AMPS
PCX 7–2	0–7	0–2
PCX 15–1.5	0–15	0–1.5
PCX 21–1	0–21	0–1
PCX 40–0.5	0–40	0–0.5
PCX 72–0.3	0–72	0–0.3
PCX 100–0.2	0–100	0–0.2

Suffix "E" (zeroing)
Suffix "R" (calibration)
Suffix "T" (0.005% per °C TC option)
Suffix "C" optional case

Same as PCX, except fast programmable, capacitorless output. Restricted to non-capacitive loads.

OPS group I

20 WATTS



MODEL	VOLTS	AMPS
OPS 7–2B	0–7	0–2
OPS 15–1.5B	0–15	0–1.5
OPS 21–1B	0–21	0–1
OPS 40–0.5B	0–40	0–0.5
OPS 72–0.3B	0–72	0–0.3
OPS 100–0.2B	0–100	0–0.2

Suffix "C" optional case

Programmable current stabilizer, voltage limited.

CCP

20 WATTS

MODEL	VOLTS	AMPS
CCP 7–2	0–7	0–2
CCP 15–1.5	0–15	0–1.5
CCP 21–1	0–21	0–1
CCP 40–0.5	0–40	0–0.5
CCP 72–0.3	0–72	0–0.3
CCP 100–0.2	0–100	0–0.2

Suffix "E" (zeroing)
Suffix "R" (calibration)
Suffix "P" (current control rheostat)
Suffix "VM" (voltage repeater)

Non-programmable voltage stabilizers with re-entrant current limiting, built-in overvoltage crowbar.

BKF I

15–25 WATTS

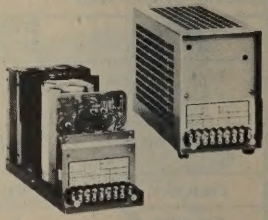
MODEL	VOLTS	AMPS
BKF 1.25–7	1.25 ±10%	0–7
BKF 3.5–5	3.5 ±10%	0–5
BKF 5–3	5.0 ±10%	0–3
BKF 5–5	5.0 ±10%	0–5
BKF 12–1.4	12.0 ±10%	0–1.4
BKF 12–2.4	12.0 ±10%	0–2.4
BKF 15–1.2	15.0 ±10%	0–1.2
BKF 15–2	15.0 ±10%	0–2
BKF 24–0.8	24.0 ±10%	0–0.8
BKF 24–1.2	24.0 ±10%	0–1.2
BKF 28–0.6	28.0 ±10%	0–0.6
BKF 28–1	28.0 ±10%	0–1

Suffix "V" (crowbar adjust)

Non-programmable, voltage stabilizer with re-entrant current limiting. Built-in overvoltage crowbar.

BKF II

100 WATTS



MODEL	VOLTS	AMPS
BKF 5–11	5 ±5%	0–11
BKF 8–10	8 ±5%	0–10
BKF 12–7	12 ±5%	0–7
BKF 15–6	15 ±5%	0–6
BKF 24–4	24 ±5%	0–4
BKF 28–4	28 ±5%	0–4
BKF 36–3	36 ±5%	0–3
BKF 48–2.5	48 ±5%	0–2.5

Suffix "C" optional case
Suffix "V" (crowbar adjust)

Programmable voltage *and* current stabilizer with automatic crossover, optional crowbar overvoltage protector.

PTR

50 WATTS

MODEL	VOLTS	AMPS
PTR 7–5.5	0–7	0–5.5
PTR 15–3.3	0–15	0–3.3
PTR 21–2.5	0–21	0–2.5
PTR 40–1.4	0–40	0–1.4
PTR 72–0.8	0–72	0–0.8
PTR 100–0.6	0–100	0–0.6

Suffix "E" (zeroing)
Suffix "R" (calibration)
Suffix "T" (0.005% per °C TC option)
Suffix "VP" (overvoltage crowbar)

KEPCO, INC. • 131-38 SANFORD AVENUE • FLUSHING, N.Y. 11352 U.S.A. • (212) 461-7000 • TWX #710-582-2631 • Cable: KEPCOPOWER NEWYORK

KEPCO POWER SUPPLIES

Same as the PTR, programmable voltage and current stabilizer with capacitorless output for fast programming capability (no overvoltage crowbar). Restricted to non-capacitive loads.

OPS
group III
50 WATTS

DTM
20 WATTS

Dual tracking output.

MODEL	VOLTS	AMPS
DTM 2X16–0.6	0–±16	0–±0.6

FERRORESONANT

60–450 WATTS

Fixed output, heavy duty stabilizers for exceptional longevity under rugged conditions. PRM's offer high efficiency (60–75%) and excellent source isolation.
For custom volt-ampere combinations, consult factory.

Size D
PRM
60 WATTS

Tap adjustable output, 60 Watts.

MODEL	VOLTS	AMPS
PRM 5–10	5.0*	10.0*
PRM 6.3–8	6.3*	8.0*
PRM 8–7	8.0*	7.0*

Suffix "–50" (for 50 Hz)
Current rating reduced 20%.
Suffix "C" optional case

Size C
PRM
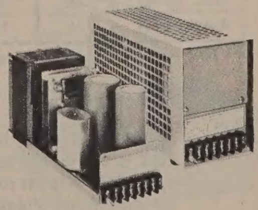
450 WATTS



KEPCO, INC. • 131-38 SANFORD AVENUE • FLUSHING, N.Y. 11352 U.S.A. • (212) 461-7000 • TWX #710-582-2631 • Cable: KEPCOPOWER NEWYORK

KEPCO POWER SUPPLIES

SWITCHING

25 KHz converters which offer a considerable reduction in size and weight, owing to the elimination of source frequency magnetics. Efficiency ranges from 65—80%. Kepco's switch mode stabilizers control voltage with a current limit and built-in overvoltage circuit. A logic programmable on-off circuit is standard.

RMK

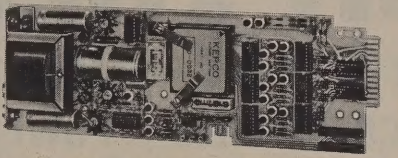
PROGRAMMERS

These programmers are designed for use with all Kepco operationally-programmable power supplies (high speed *and* conventionally filtered). They enable you to interface your d-c power supplies with the logic bus of a computer-controlled system.

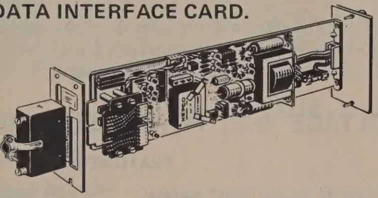
SN

PARALLEL DATA INPUT

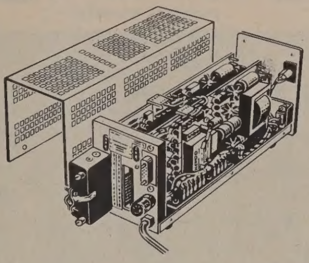


5 digital interfaces for programmable power supplies offering 8-, 10-, or 12-bit binary resolution, or 2-digit, 3-digit BCD resolution. SN's are optically isolated so that they may be used to drive arbitrarily grounded unipolar power supplies.

HARDWARE FOR USE WITH THE SN PARALLEL DATA INTERFACE CARD.

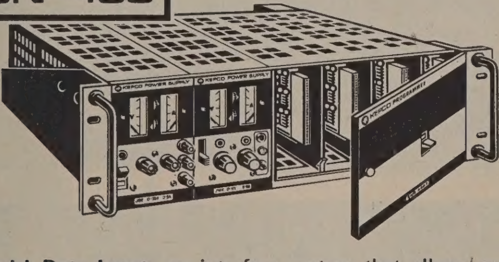


SNK–1 – Slide Adapter [shown with an SN–3 (3 BCD) card mounted in place.] This adapter enables the SN parallel data interface card to be mounted in any of Kepco's 1/6-slot hardware systems, including bench and rack housings.



CA–6 – Dual Card Enclosure [shown with two SN-12 (12-bit binary) cards installed.] The CA-6 fits a ¼-width slot and enables up to 8 SN Cards to be fitted into a 5¼" x 19" rack space.

SN-488



SN-488 Serial Data Input: an interface system that allows any Kepco operationally programmable d-c power supply to function as a *listener* on the *General Purpose Interface Bus* (IEEE-488). The system consists of optically isolated two-channel cards each with 12-bit resolution (or 3 BCD) that plug into either a 4-card or an 8-card housing. The housing contains the "handshake" interface and distributor that allows up to 8 dual cards to be addressed from a single bus connector.

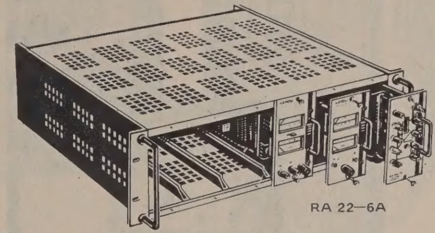
KEPCO POWER SUPPLIES HARDWARE

RA 22-6A

Rack System

FOR PLUG-IN MODELS: OPS–II, PCX–MAT and CC

(OPS-I and PCX models can also be mounted using BPA-22 Adapter)



RA 22–6A

KILOVOLT
CORPORATION

HIGH VOLTAGE

POWER SUPPLIES • INSULATION TESTERS ACCESSORIES • POWER PACKS

A pioneer in high voltage techniques, KILOVOLT CORPORATION designs and manufactures a wide variety of power supplies and insulation testers and power packs ranging from 1,000 to 1,000,000 volts. These units are soundly engineered, ruggedly constructed and conservatively rated. Units are custom designed for all types of industrial processing as well as experimental laboratory work.

In addition, KILOVOLT CORPORATION can furnish anti-corona hardware devices, isolating resistors, high voltage voltmeters and high voltage spark gaps. Why not check us for all your high voltage requirements.

HIGH VOLTAGE D.C. POWER SUPPLIES FOR INDUSTRY

FEATURES

- **Reversible Polarity Output (most models)**
- **Continuously Variable Output Control**
- **Adjustable Over-Current Shut-Off**
- **Adjustable Over-Voltage Shut-off**
- **Safety Interlock on H.V. Cabinet Door**
- **Zero-Start Interlock**
- **Dual Range Voltage and Current Meter**
- **Fail-Safe Output Shorting Mechanism**
- **Circuit-Breaker Operation**
- **Functional Pilot Lamps**
- **Surge Limiting Resistor**
- **External Interlock**

ELECTRO-MECHANICAL REGULATION. The above models may be ordered with either voltage regulation, current regulation, or both by means of a servo regulating system.

SATURABLE REACTOR CONSTANT CURRENT. By use of a saturable reactor in conjunction with any of the standard models above, the output current can be held constant to within approximately 10% of the preset level for load variations from short circuit to full load and to within 3% for a half-load to full load change.

REGULATED HIGH VOLTAGE D.C. POWER SUPPLIES

Highly regulated against input line variations or changes in load, these power supplies employ fast response electronic regulation.

FEATURES

- **Continuously Variable Output**
- **Overload Protection**
- **Zero-Start Interlock**
- **Cabinet Interlock**
- **Provisions for External Interlock**
- **Reversible Polarity Output (most models)**
- **Circuit Breaker Operation**
- **Monitoring Pilot Lamps**
- **Electronically Protected 4½" Meters**

HIGH VOLTAGE D.C. POWER PACKS

These units are high voltage sections of standard power supplies minus meters and controls and contain the basic components described for standard power supplies — filter system, fail-safe mechanism, surge resistor, meter multiplier, primary gaps, etc.

HIGH VOLTAGE HARDWARE AND ACCESSORIES

MULTIPLIERS AND DIVIDERS. High voltage resistance strings, accurate to 0.15% or better with division ratios which may be specified. Stability is 25 PPM/°C; current drain 1 ma. Accuracy traceable to NBS standards as an option.

ELECTRONIC CROWBAR designed to protect Klystron or other sensitive loads from damage by discharge of power supply energy can be manufactured into your custom-built power supply or provided as separate devices. A typical unit has a response time of 3-5 microseconds and is capable of discharging five microfarads in approximately one millisecond at 20 KV.

CALIBRATED SPARK GAPS provided with micrometer calibration and may be used for determining crest voltage.

HIGH VOLTAGE OUTPUT BUSHING. Oil filled and terminated with anti-corona toroids, these devices are designed for oil-to-air outlet of very high voltages; available in two ratings, 300 and 600 KV D.C.

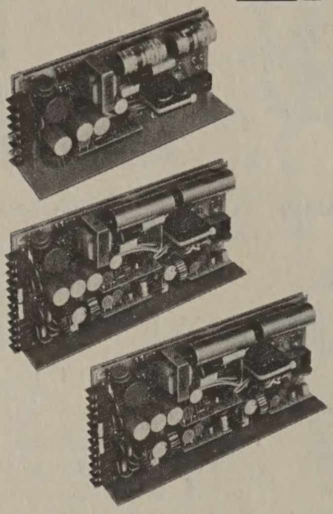
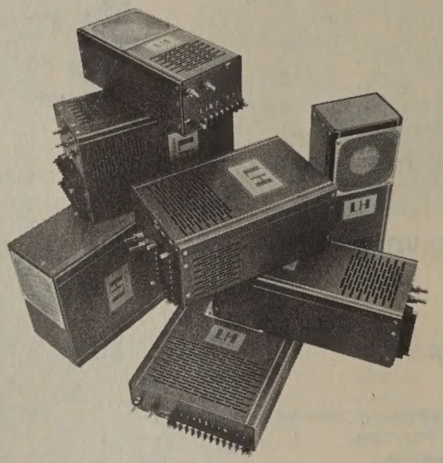
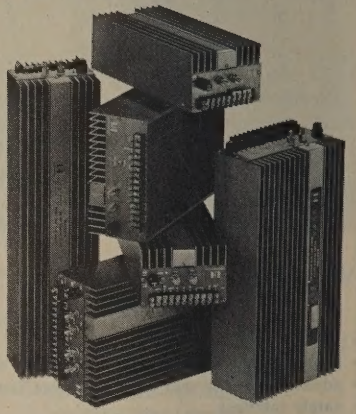
LH Switchers



Tiny-**MITE** Series



Mighty-**MITE** Series



LH Series
Little-**MITE** Series
Dyna-**MITE** Series

We Make More Single- and Multiple-Output Switchers Than Anybody Else.
Try us for Size — and Economy and Efficiency, too

Wide selection of power ratings and configurations — We make switching regulated power supplies. Exclusively. 1, 2, 3, 4, 5, and 6 output switchers. From 100 to 1500 watts in a variety of packaged and open-frame configurations for a broad range of applications.

More power in smaller packages — Nobody packs more power in smaller packages: up to 2.26 watts/in.^{3} — more than twice the density of competitive switchers; 4 to 5 times the density of linears... Efficiency to 80% ... *All models designed to meet UL 478* ... Each guaranteed two years.

Five standard series; custom designs, too — Right now we offer our standard **LH Series** plus the four MITE Series switchers, which include: **Mighty-MITE** (MM) Series — 375 to 1000 watts. High power density. *Fan-cooled.* **Little-MITE** (LM) Series — 250 to 600 watts. Medium high power. *Convection-cooled.* **Tiny-MITE** (TM) Series — 100 to 150 watts. *Open frame. Convection-cooled.* **Dyna-MITE** (DM) Series — 250 to 600 watts. *DC input. Convection-cooled.*

Major specs for each series appear in the tabulation. And if one of our standard LH or MITE Series models won't do your job, we'll customize one that will.

We'd like to tell you more. Call or write for details.

HIGHER VOLTAGE

REGULATED POWER SUPPLIES: Precise voltage or current regulation of ±0.01% for line or load changes. Adjustable from Zero. Short circuit protected. R or E programming. Completely solid state. AC/DC ratings to 2 Megavolts and 1 Megawatt.

Bulletin RDC-1000

ADJUSTABLE POWER SUPPLIES: DC unregulated. All models fully controlled and protected with ratings from 1KV to 2000 KV at 1 Megawatt. Special "S" model with simple or no controls. Many variations in options and features available.

Bulletin ADC-1000

PRECISION DIVIDERS: Accuracies of 0.01%, 0.1%, 1.0%. DC/ACP, DC, AC RMS. Variable ratios.

Bulletin HVD-1000

DC INSULATION TESTERS: Qualitative or quantitative testing to 1 Megavolt. Portable or mobile. Burn and "Thumper" feature.

Bulletin DCI-2000

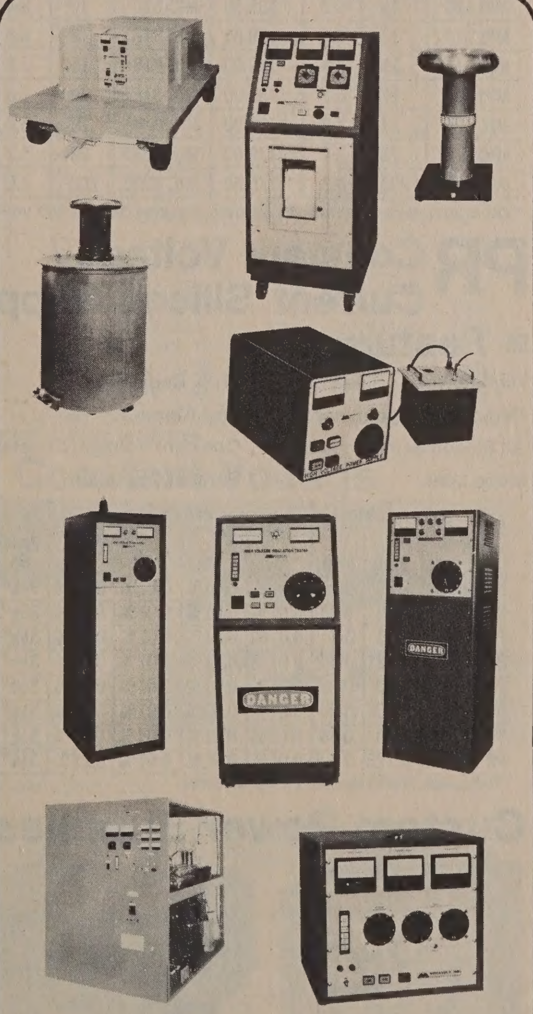
AC INSULATION TESTERS: Ratings to 400KV/1000KVA. Memory meter indicates breakdown voltage. High speed overload. Options include, Corona free, automatic voltage sequencing, variable speed control. Conforms to ASTM.

Bulletin ACI-3000

TRANSFORMERS: Isolation to 500KVDC. Filament. Air, Oil, Gas, Insulation. Ratings to 300KVRMS/400 KVA.

CUSTOM COMPONENTS: Spark gaps. Crowbars. Oil filled bushings. Anti-corona Spheres and Toroids. Shielded cables. Shorting and Disconnect Switches. Series Limiting Resistors. Capacitors. Rectifiers.

TYPICAL APPLICATIONS Dielectric Heating • Electro Static Cooling • Carbon Deposition • Beam Separator • X-Ray Thickness Gauge • Pulse Charging Lines • Capacitor Charging • Air Purifying • Paint Spraying • Fiber Flocking • Mineral Separation • Grain Cleansing • Recovery of Precious Metal Dust • Electron and Field Ion Microscopy • Testing Large Rotating Machinery • Cloud Chamber • Vacuum Arc Experiments • Removal of Liquid Fuel Contaminants • Killing Bacteria • Electron Beam Welding and Machining • Zone Heating • Testing Liquid and Solid Dielectrics • Processing Razor-Blades • Processing Vegetables • Spectroscopy • Spark Chamber • Processing Synthetic Rubber • Charging Electrostatic Antennae for Cloud Study • Ion Propulsion Engines • Injection and Focusing Devices on High Energy Accelerators • Sparking of Cathode Ray Tubes • Life Testing and Processing of Vacuum Tubes • Energizing Laser Devices • Charging Paper for Xerography Printing • Radar • Image Intensifier • Sputtering Processes • Impulse Testing • Explosive Forming • Electrophoresis • Ion Implantation • Tomography • TWT



- 400 Standard Models with Voltage Ranges to 2 Megavolt and Powers to 1000 KW
- Completely Solid State, Self Protecting
- Safe Simple, Foolproof Operation
- Maximum Personnel and Equipment Protection
- Standard Models Easily Modified for Custom Design.

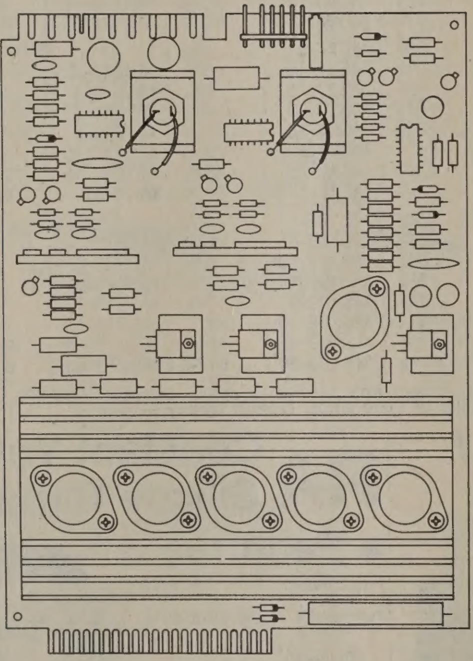
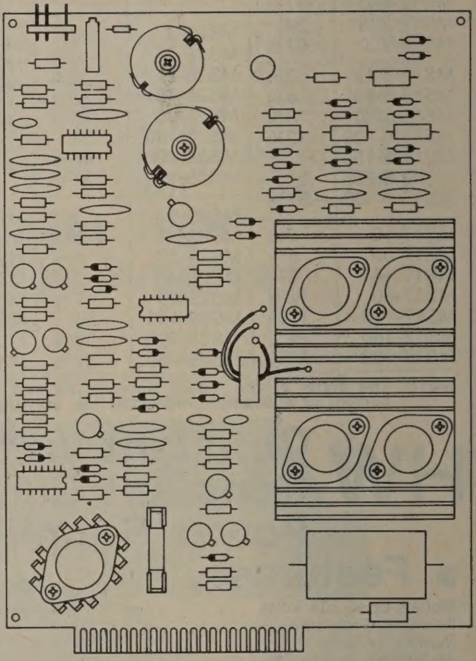
We can make our standard line supplies...



±12V
6,8A



5V
60A

NCRNCRNCRNCRNCRNCR

your supply.

The design and manufacture of power supplies for NCR corporation commercial systems, demand a high level of quality and reliability. High quality and reliability are words we define as total dependability.

And that same field-tested dependability in our power supplies is available for application in your OEM commercial systems.

ADVANTAGES:

- DESIGNED AND BUILT TO THE HIGHEST COMMERCIAL STANDARDS
- FIELD PROVEN IN NCR COMMERCIAL SYSTEMS
- WORLD-WIDE FIELD SERVICE AVAILABLE
- PRICE BENEFITS FROM VOLUME PRODUCTION
- UL, CSA, VDE RECOGNIZED

Give us a call and we'll review your power requirements with you...and show you how our existing design-proven power supplies will perform to your satisfaction.

You'll find our power supplies are available for OEM computer, point of sale, EDP, bank telling and telecommunications use:

- Switching regulator and linear designs
- 11 models — single/multi-output
- Voltage ranges, from 2 to 30V
- 50 current levels from .01 to 225 amps
- Overcurrent/overvoltage protection
- Filtering to meet world-wide EMI requirements
- Manufactured in accordance with UL, CSA and European safety requirements

PRECISION CURRENT & VOLTAGE SOURCES

PRECISION CURRENT SOURCES

ACCURACIES TO 0.01% **STABILITIES TO 2 PPM**

APPLICATIONS:

- Laboratory and Production Testing of Semiconductors, Gyros, Lamps, Meters, Thermistors, etc.
- Systems requiring a Precision Constant Current Setting such as X-ray Equipments, Electron Beam Welders, and Electron Beam Microscopes.

FEATURES:

- Digital In-Line Current Setting and Readout.
- 5 or 6 Decade Dividers for Setting to 1 Part in 100,000 or 1 Part in 1,000,000 of Full Scale.
- Uni- and Bi-Polar Models.
- External Modulation Capability.
- Externally Programmable Models.
- Automatic Protection Circuits.

PRECISION VOLTAGE/CURRENT SOURCES

These highly stable and accurate precision sources can be operated in either constant voltage or constant current modes.

All models include such features as manual and remote programming, and output voltage regulation by either local or remote sensing.

Voltage and current outputs are selected on decade switches whose markings form an in-line digital readout.

Automatic protection limits output voltage and current to safe levels. No voltage or current overshoot occurs during turn-on or turn-off. A warning indicator alerts the operator if the actual output should differ from the dialed setting beyond the specified limits. Models TC-100.2BR and TC-602CR include a panel meter to monitor output current.

Model	Constant Voltage (V)	Constant Current (mA)	Accuracy (%)	Stability (ppm)	Decades

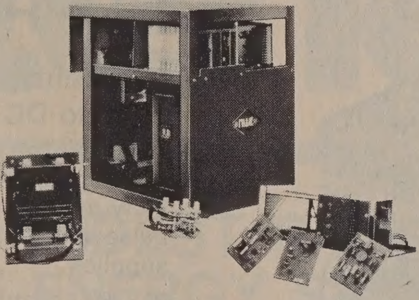
CUSTOM BUILT AC/DC POWER SUPPLIES, INDUSTRIAL AND LABORATORY TYPES,

TO YOUR SPECIFICATIONS – HIGH OR LOW CURRENT, VOLTAGE OR FREQUENCY, CONSTANT OUTPUT, PRECISE REGULATION FOR SPECIALIZED APPLICATIONS

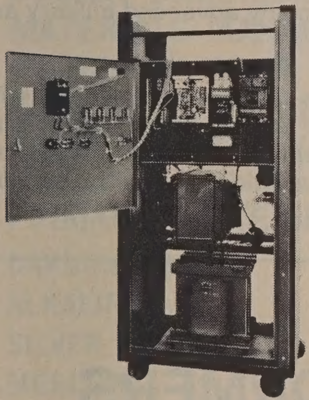
Manufacturing power supplies utilizing forced air, water, natural convection and oil cooling systems; both regulated and non-regulated using saturable reactor; variac or SCR controls.



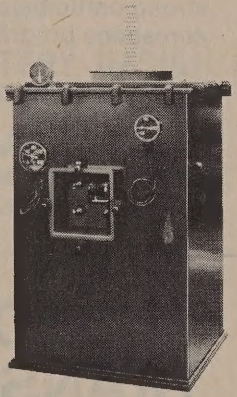
75 KVA water-cooled SCR controlled supply for electric melting furnace.

MANUFACTURING RANGE

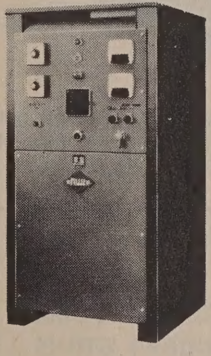
Up to 150 KV
1 ma to 50,000 AMP
4 Hz to 20 Khz
5 KVA to 2000 KVA
50 lb. to 15,000 lb.



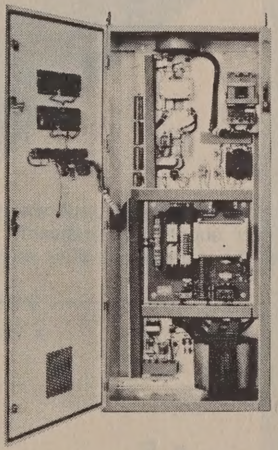
45.5 KVA Saturable Reactor controlled precisely regulated high voltage power supply for sputtering film application.



This unit is typical of our oil-filled power supplies and is rated 45 KV DC at 1 amp output.



Distortion free high current low voltage programmed power supply with precise regulation used for laboratory component testing.



Solid State SCR type Controller with current limiter and spark rate control used with an NWL manufactured Transformer Rectifier set.

NWL also manufactures various types of power transformers, reactors, chokes. See our full page ad in the transformer section of EEM.

Our engineers are available to assist you in selecting magnetic components to meet your application requirements.

NWL TRANSFORMERS

"Manufacturers of the World's Finest Electrical Equipment"

CUSTOM POWER SUPPLIES

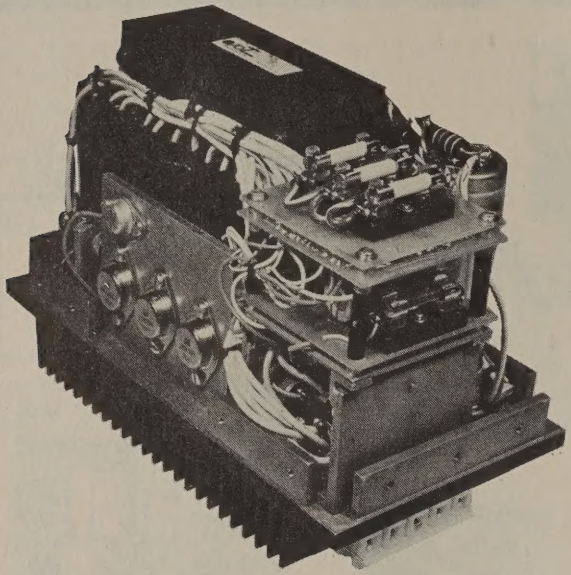
- Switching Regulator
- DC to DC Converter
- Linear
- Ferroresonant

OPT specializes in custom designed high reliability military, and hi-grade commercial linear and pulse width modulated switching regulator power supplies.

At OPT, custom power supplies are professionally designed and skillfully manufactured to achieve outstanding reliability and performance.

Our high quality standards are reflected by our strong participation in many advanced military and aerospace programs.

We would be pleased to discuss your requirements. Our outstanding power supply design team, augmented by our excellent magnetics group, offers seasoned engineering solutions to your power supply requirements.

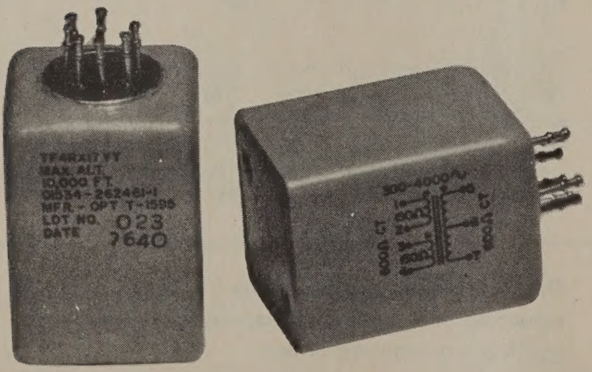


This custom Naval Underwater 3 Phase 400 Hz multiple output power supply was delivered ready for dockside installation exactly eight weeks after receipt of order.

CUSTOM TRANSFORMERS

- MIL-T-27
- MIL-T-16315
- MIL-T-21038
- Quality OEM Commercial Magnetics

OPT offers you one source for all your custom transformer requirements, military and commercial. Our technology and production capability run the full gamut of todays demanding magnetic requirements and include: power, audio pulse, hybrid, D.C. converter, reactor, toroids, ferroresonant, multiphase, high Q coils, magnetic amplifiers and special purpose transformers.



OTHER PRODUCTS

OPT Industries also manufactures custom filters. See our Product Data on this unique line of products in Section 2300 page 2466.

OUR TECHNOLOGY IS ALL AROUND YOU

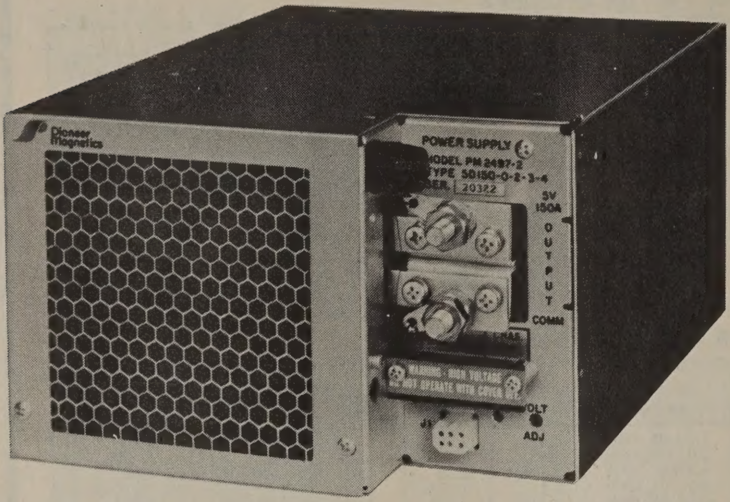
Brownoutproof Switching Power Supplies: the Dependables.



Features:

- ☐ Widest range of brownout protection
- ☐ 30 mS output holdup after input power loss with full load
- ☐ Full output rating at 50°C ambient
- ☐ 60% to over 80% efficiency
- ☐ Soft start
- ☐ Shortcircuit proof
- ☐ Overvoltage protection
- ☐ Designed to meet or recognized to UL478 and CSA154
- ☐ MTTR less than 15 minutes
- ☐ Field proven MTBF over 40,000 hours for slot supplies

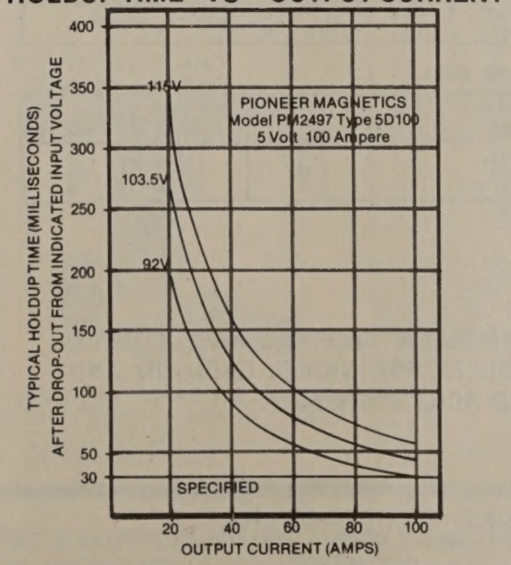
The Dependables

The Dependables are a family of single and multiple output, high current, switching regulated power supplies designed primarily for OEM digital applications where superior dynamic load and line performance is required. Their low RFI/EMI radiation and low output ripple (less than 3 mV peak-to-peak, 60 and 120 Hz ripple) also makes them attractive for analog applications.

Brownoutproof = More Uptime

Beyond inherent advantages of switching supplies over linear types (i.e., high efficiency, low weight and small size), the Dependables are uniquely immune to most utility power variations. They can supply their specified regulated outputs at full load over input variations from 92 to 138 or 184 to 250 VAC; and they'll continue to do so for several minutes even if input voltages drop to 70 or 140 VAC.

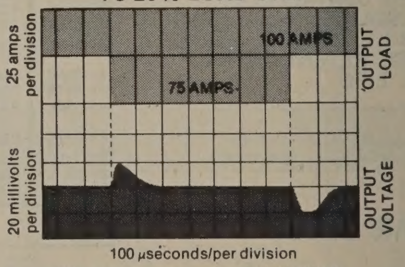
HOLDUP TIME VS OUTPUT CURRENT



Easy to Specify

Unique to the Dependables is a worst-case method of specifying voltage regulation that simplifies the design engineer's task by giving a known limit to cumulative tolerances. This limit – 2% – defines the maximum deviation from a set value from any combination of Drift, Line Regulation, Static and Dynamic Loads, and Peak-to-Peak Noise and Ripple. Well within this ±2% total error band, the typical transient response of a 5 Volt 100 Ampere supply to a 25 Ampere load step is approximately 20 mV.

TYPICAL TRANSIENT RESPONSE TO 25% LOAD STEP



This is the response of a Model PM2497, 5 Volt, 100 ampere unit to a 25 ampere load step.

DC to DC Units Too

The Dependables are also available as DC input versions with 24, 48, 120 or 240 VDC as standard source voltages. Pioneer Magnetics can provide units that operate from both AC and DC sources allowing ease of switching to battery back-up for UPS applications. Check with us for further information.

Our Experience

Since 1958 Pioneer Magnetics has specialized in the design and manufacture of switching power supplies. A continual development program ensures that every switching supply we manufacture is properly designed, conservatively rated and thoroughly tested. Only then do we feel it has earned the name: the Dependables.

SINGLE OUTPUT POWER SUPPLIES

AC-Input Units: 92 to 138 or 184 to 250 VRMS (specify choice), other ranges available on request, single phase, 47 to 63 Hz. Will regulate through line dips to 70 or 140 VRMS.

DC-Input Units:

NOMINAL VOLTAGE	INPUT RANGE
24	22-31
48	42-54
120	100-145
220	200-250

Output: *

AC INPUT MODEL	PM2496	PM2497	PM2498	OUTPUT VOLTAGE ADJUSTMENT RANGE

15	25	50	100	12.8-15.8
18	22	45	90	15.3-18.9
21	18	38	76	17.9-22.1
24	16	33	66	20.4-25.2
28	13	27	54	23.8-29.4
48	8	16	32	42.0-50.0
SIZE (INCHES) WEIGHT	5 x 8 x 11 16 pounds	5 x 8 x 11 18 pounds	5 x 16 x 11 35 pounds	

*Other output volt/amp combinations are available.

Total Error Band: ±2% (±100 mV for 2 and 3-volt units) including the following:

Input power variation over the specified range.
Static loads from 0 to 100%.
Dynamic Load Steps (10 μsec rise) 25% on 5 VDC units, up to 90% on higher voltage units.
Ripple and switching spikes.
Temperature stability over full operating range 0° to 50°C.
Drift for an 8-hour period following initial warmup.

Overshoot: No turn-on or turn-off overshoot.

Power Loss Holdup: For AC-input units only. Output will remain within regulation 30 milliseconds after loss of AC input when operating at full load and nominal line.

Overvoltage Protection: Overvoltage shutdown, to protect the load, is provided and set at 125% ±10% of rated output. An additional overvoltage crowbar is available as an option.

Overload Protection: All units are protected against overload and short-circuit. The output recovers automatically from over-current shutdown after load fault is removed.

Overtemperature Protection: Automatically shuts unit down in the event of overtemperature condition.

Reverse Voltage Protection: Supply is protected against reverse voltage applied across the output terminals.

Remote Sense: Standard on all units. Handles up to one volt drop in the output leads.

Input Fuse: Standard on all units.

EMI: Meets VDE 0875 Level N requirements for input conducted EMI with external filter.

Environmental: Temperature, operating: 0° to 50°C at 100% rated power, derates linearly to 80% of rated power at 71°C.

Size and Weight: See output chart.

MULTIPLE OUTPUT POWER SUPPLIES

Standard Multiple Output Power Supply with the flexibility to meet your exact custom requirements.

Specifications similar to single-output with the following additions and changes.

Outputs: Up to four completely isolated outputs. Either polarity can be chosen for each output. See chart below.

</table>

Note 1: Brownout capability reduced for this Model.

Note 2: Main channel must maintain 50 watt minimum load so that other channels regulate properly.

Note 3: Maximum power for 2 and 3 volt outputs is 60% figure given.

Note 4: Check with factory for higher current ratings.

Note 5: Check with factory for current ratings on these and other special voltages.

Overvoltage Protection: Automatic overvoltage protection is provided on the main channel as standard. OVP on other channels can be provided as an option. Overvoltage crowbar is optionally available for the main channel.

Remote Sense: Standard on main and channels two and three.

Size: 5'' x 8'' x 11¾'' (PM2677 and PM2678 add 1-9/16'' for external fan).

Weight: 20 pounds.

Options

- Power Fail Signal
- Logic Inhibit
- True Inhibit
- OV Crowbar
- Remote Programming ±5%
- Local Margin Check
- Remote Margin Check to ±10%
- Paralleling
- Reverse Input Protection (DC-input units)
- Output Out of Tolerance
- Output Power Good
- Sequencing (Multiple-output units)
- Additional outputs
- Automatic battery backup and charging
- Additional EMI filtering

Contact us today for complete details on our line of standard and customized switching power supplies to meet your specific needs.

CUSTOM REPLACEMENT BATTERIES for the PHOTOGRAPHIC INDUSTRY

Power Incorporated is capable of supplying you faster, because we have over 10,000 cell and battery sizes in our stock (pictured are only four). We are manufacturers of nickel - cadmium batteries for those involved in the photographic industries. Let us replace your worn batteries with a rechargeable nickel - cadmium battery by Power Incorporated. We guarantee our products and can meet your demands on a day to day basis.

Our specialty is manufacturing new rechargeable nickel - cadmium batteries . . . but we are also equipped to rebuild dead batteries . . . send us your dead battery . . . we can rebuild it at a lower cost.

FIG. C

ALSO MARKETS:

- Emergency lighting units.
- Flashlight and lantern rechargeable batteries.
- Custom and prototype design battery packs built to your specifications.
- Battery chargers for all types of batteries.
- Batteries - NICKLE CADMIUM - SILVER CADMIUM - SILVER ZINC - MERCURY - SEALED LEAD-ACID.

All cylindrical and oval battery types feature a pressure safety device for security and reliability making them especially suited for cordless consumer and electronic products.

CUSTOM BATTERY PACKS

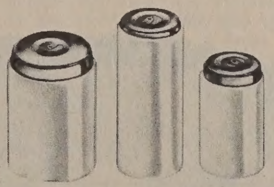
Cylindrical cells are incased in a rigid, high impact case. Case materials are highly dielectric to provide maximum cell insulation at minimum cost. The case is vented to each cell to provide cooling and long life. Packs are available to your specifications in any voltage.

FAST CHARGE CELLS

Special fast charge cells are available on special order either individually or in custom battery packs with thermistors for extra fast recharge capability.

Button cell batteries are constructed of sealed nickle cadmium button cells (see fig. B) to meet almost any application requirement. The compact size of button cells permits easy stacking to form multiple cell batteries of optimum power/volume ratio and space utilization. Completely sealed button cells are ideally suited for portable radios, flashlights, photoflash, alarms, and any low-drain, high capacity application.

TYPICAL BUTTON CELL BATTERIES



INVESTIGATE direct current emergency power sources available in any regulated voltage or current, featuring automatic SCR solid state switchover to a self-contained battery. We have the answer to reliable economical D.C. power with automatic emergency back-up.

HIGH VOLTAGE POWER SOURCES

CALIBRATED POWER SOURCES FOR PHOTOMULTIPLIER PROPORTIONAL AND SOLID STATE DETECTORS, ELECTRON OPTICS, LASERS, CRT DISPLAYS

MODEL 1556B

Calibrated high voltage power sources supplying tightly regulated DC for critical applications where stability, low noise and reliability are of prime consideration. • .25% calibration accuracy • 10 MV resolution • Sealed transformers and rectifiers • Self-restoring overload and short circuit protection • All solid state except for "Series" Pass Tube • Voltage and current metering.

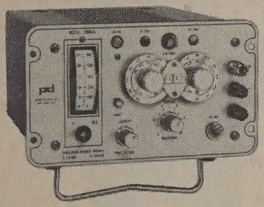
TECHNICAL DATA

CALIBRATED POWER SOURCES

CALIBRATED, STABLE, LOW NOISE, HIGH RESOLUTION POWER SOURCES FOR PRECISION LABORATORY APPLICATIONS

0-20 VDC/0-500 mA

MODEL 2005A

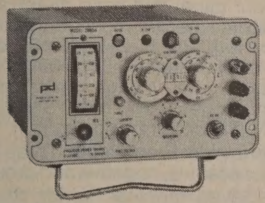


***$370.00**

• Two dual concentric switches (four decades) and a calibrated potentiometer provide digital readout to five significant figures • A toggle switch provides readout to six figures above 10 volts • Last-place potentiometer has 10 μV resolution • Source impedance is less than two milliohms at DC, less than 0.5 ohms at 1 MHz • Recovery time is less than 25 microseconds to return within a 100 μV band of the programmed voltage for an 80% load change • Front and rear access terminals.

• Better than 0.1% calibration accuracy • Critical components in temperature stabilized oven • 10 PPM plus 100 μV stability for 8 hours • Temperature coefficient better than 10 PPM or 50 μV per °C • Self-restoring overload and short circuit protection with adjustable current limit control and flashing limit indicator • 100 μV maximum peak-to-peak ripple (250 μV on Model C400) • Solid silver decade switch contacts • 100 hour minimum burn-in prior to calibration • Individual calibration data furnishd with each unit • Provisions for remote sensing and remote resistance programming at 1000 Ω/volt • Voltage or current metering.

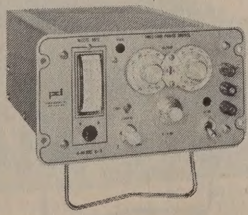
0-20 VDC/0-2 A



• Two dual concentric switches (four decades) and a calibrated potentiometer provide digital readout to five significant figures • A toggle switch provides readout to six figures above 10 volts • Last-place potentiometer has 10 μV resolution • Source impedance is less than two milliohms at DC, less than 0.5 ohms at 1 MHz • Recovery time is less than 25 microseconds to return within a 100 μV band of the programmed voltage for an 80% load change • Front and rear access terminals.

MODEL 2020A ***$395.00**

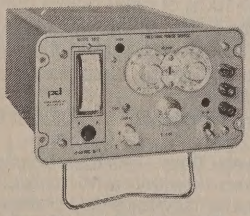
0-40 VDC/0-1 A



• Two dual concentric switches (4 decades) and a calibrated 10-turn potentiometer provide calibrated readout to six significant figures • Sixth place interpolation with 10 microvolt resolution • Dial accuracy is 0.1% plus one millivolt below one volt, 0.1% from one to forty volts • Front and rear access terminals • Bail/carrying handle tilts front panel for viewing ease • Electrical characteristics similar to Model 2005A.

MODEL 4010 ***$395.00**

0-100 VDC/0-400 mA



• Two dual concentric switches (4 decades) and a calibrated 10-turn potentiometer provide calibrated readout to six significant figures • Sixth place interpolation with 10 microvolt resolution • Dial accuracy is 0.1% plus one millivolt below one volt, 0.1% from one to 100 volts • Front and rear access terminals • Bail/carrying handle tilts front panel for viewing ease • Electrical characteristics similar to Model 2005A.

MODEL C400 ***$395.00**

TECHNICAL DATA

Uniply®

A Laboratory of Power Supplies in a Single Package

The UNIPLY® principle involves a regulator technique that provides a general purpose power source functionally replacing four conventional power supplies.
The regulator system comprises a number of unregulated DC sources, a number of power semiconductors selected for optimum voltage and current characteristics and a single control amplifier which selects through "OR" gates that combination of unregulated source and power semiconductors that satisfy the demands of the load and the panel control settings with minimum power supply losses.
Ranging is automatic and transient-free. Operation is electronic, without relays or manual switching and utilizes linear circuits only. No triacs, SCR's or switching circuits are employed.

A built-in front panel continuously adjustable overvoltage "crowbar" in conjunction with an inhibit switch limiting the automatic ranging to 6 volts provides completely safe operation with digital circuit loads. The UNIPLY® technique permits increased power supply capability with increasing AC line voltages. Up to 150% of panel ratings is available at line voltages over 105 volts. Useful output at reduced levels is available at line voltages as low as 85 volts. A flashing panel indicator signals loss of regulation if load demands exceed the regulator capability or AC input voltages are inadequate.
Two voltage and current ranges are provided on the taut-band suspension panel meter to increase resolution. Ranges switch automatically with range switch setting.

Model 6050A: 0-7V at 5A / 0-15V at 3A / 0-25V at 2A / 0-60V at 1A *$249.00

SPECIFICATIONS

Input: 105-125 volts, 57-440 Hz, 100 watts nominal.
Line Regulation: 0.01% + 1 millivolt.
Load Regulation: 0.01% + 1 millivolt for load variations from 0-100% of rated output current.
Polarity: Either positive or negative output terminal may be operated at ground potential
Ripple and Noise: Less than 1 millivolt peak-to-peak.
Source Impedance: <0.005 Ω at DC, 0.1 Ω to 20 KHz, 1.0 to 1 MHz.
Recovery Time: Less than 50 microseconds to return to within a 15 millivolt band of the original voltage for a step change in rated load of 10% to 100% (1 microsecond rise time).
Stability: 0.02% +3 millivolts per 24 hours.
Operating Temperature: 0-50°C at full load. Storage: −20°C to +85°C.
Temperature Coefficient: 0.02% per degree C.
Current Limiting: Concentric switch/potentiometer provides continuous adjustment in two ranges: 0-500 milliamperes, 0-5 amperes.
Metering: Front panel taut-band meter and a selector switch permit monitoring voltage or current with an accuracy of ±3% of full scale. Voltage ranges 0-6V/0-60V change automatically with voltage range control. Current ranges 0-500 mA/0-5A change automatically with current range control.
Output Terminals: Front Panel: Three binding posts for positive, negative and ground.
Rear Panel: Seven terminal barrier strip for output voltage, sensing, voltage programming and parallel operation.
Dimensions: 8⅜" wide x 4¾" high x 11⁹⁄₁₆" deep.
Weight: 15½ lbs.
Overvoltage Crowbar: Built-in overvoltage crowbar adjustable from 2.0 V to 70 V from the front panel.

Model TW6050A: TWO MODEL 6050A SOURCES IN A 3-1/2" x 19" RACK MOUNTING PACKAGE *$449.00

More compact than two Model 6050A units, the Model TW6050A offers two independent sources which are electrically identical to the Model 6050A, but permit series operation to 120 V at 1 ampere or parallel operation to 7V at 10 amperes.

Model 6150: 0-7V at 15A / 0-15V at 7.5A 0-25V at 5A / 0-60V at 2A * $370.00

The Model 6150 offers more than twice the output power of the Model 6050A, with essentially the same electrical characteristics. Two taut-band meters are provided. Each instrument has two voltage and current ranges 0-6V/0-60V, 0-1.5A/0-15A. Ranges switch automatically with range switch setting. The Model 6150 mounts in a 19" rack, measures 3½"H x 16"D and is suitable for laboratory bench operation as well.

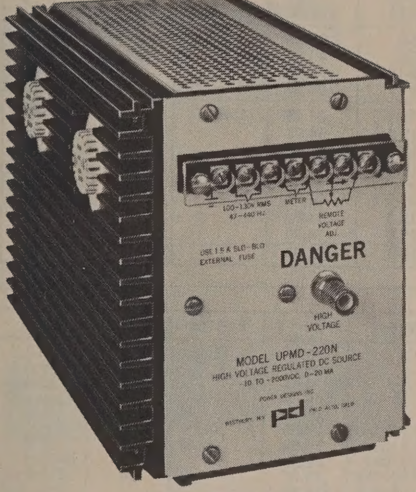
MODULAR HIGH VOLTAGE PRECISION POWER SOURCES



10-2000 VDC, 0-20 MA
10-3000 VDC, 0-10 MA
10-5000 VDC, 0-5 MA

The UPMD series of high voltage sources are compact modular units designed for critical applications where high stability, low noise and flexibility of output voltage control are important considerations.

They are ideal for such applications as photomultipliers, Geiger-Muller counters, proportional detectors, CRT sources, high resolution video displays, electrostatic lenses, etc.

Remote control of the high voltage output is achieved by means of an external potentiometer operating at low potentials with respect to ground. Output voltage resolution is a function of the resolution of this control. Options are available for remote voltage control at any desired input/output voltage ratio or for digital operation with an external D/A converter.

A unique overvoltage/arc suppression system is incorporated to protect the supply and its load in the event of loss of output voltage control or an overvoltage due to L di/dt transients generated by sustained load arcing. The circuit operates to clamp the output voltage to approximately 200 volts above any setting, hold this clamp for approximately two seconds and shutting down the supply electronically if the fault persists. The supply may be manually reset by momentary interruption of the AC line.

An internal 1% multiplier permits connection of an external meter for monitoring. A zener diode across the metering terminals minimizes shock hazard.

The compact size (4½″ x 6″ x 7½″), excluding the high voltage connector and light weight (8 lbs.) is achieved through the use of high frequency inverter technology in conjunction with a fast series regulator. RFI and EMI is held to low levels through the use of careful shielding and low pass AC line and DC output filters.

High voltage transformers and high voltage components encapsulated in readily replaceable epoxy modules. Low voltage components are accessible on epoxy coated PC boards.

An SHV (Safety High Voltage) BNC receptacle is utilized for the output voltage. A mating connector is furnished with each unit.

Characteristics

INPUT: 105-125 V, 47-440 Hz, 60 w (115 V line)

OUTPUT: See Table

REGULATION: .001% or 10 MV (whichever is greater), for line or load variations.

NOISE AND RIPPLE: 10 MV peak-to-peak to 1 MHz

STABILITY: Less than .01% or 15 MV (whichever is greater)

TEMPERATURE: 0-50°C

TEMPERATURE COEFFICIENT: Less than 50 PPM/°C

PROTECTION: Current limiter and overvoltage system limits output to safe levels.

SIZE: 4½″ x 6″ x 7½″

WEIGHT: 8 lbs.

MOUNTING: In any plane

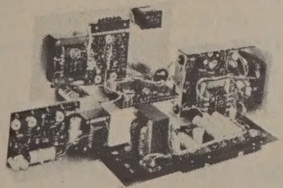
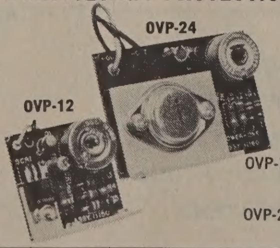
CUSTOM DESIGNS



Power-One is an experienced manufacturer of custom power supplies for high quantity applications requiring special electrical and mechanical configurations. We excell at open-frame multiple output designs, regulated or unregulated.

OVERVOLTAGE PROTECTION



These optional Overvoltage Protection modules are available for use with any power supply NOT supplied with built-in OVP. Each is adjustable from 6.4V to 36V and should be used when maximum load protection is of prime importance.

Mounting holes are provided on all chassis for these modules, which mount within the specified outline dimensions of each power supply.

OVP-12	For use on all models except E & F case sizes. When used on ±9V thru ±15V models, one OVP-12 protects both outputs.	$7.95
OVP-24	For use on E & F case models.	14.95

CUSTOM CRAFTED POWER PACKAGES FOR OEM APPLICATIONS

POWER SYSTEMS, INC. designs single and multiple power supplies and power control systems for OEM manufacturers. We offer an experienced professional approach to application engineering to assure complete system compatibility, optimum performance and long term reliability.

POWER SYSTEMS power supplies include series-pass, ferroresonant, switching regulator, and unregulated designs . . . AC-DC and DC-DC. Circuits are selected to achieve the performance required for perfect integration with an entire system. Components are standard JEDEC types, not specially selected. All designs are consistent with U.L. and C.S.A. requirements.

A POWER SYSTEMS custom crafted multiple output power system offers many advantages over the "rack-em diagonal stack-em" use of modular supplies. It uses less components for more reliability; reduces the weight of transformers and sheet metal. Cooling is greatly simplified. The user is not required to provide inter-wiring, AC power control, sequencing, filtering, or other interface circuitry.

TYPICAL APPLICATIONS

COMPUTERS
MEMORIES
MINI-COMPUTERS
MICROPROCESSORS
PRINTERS
DATA TERMINALS
TELEPHONE SYSTEMS
DATA TRANSMISSION UNITS
MEDICAL INSTRUMENTATION
MILITARY SEA/LAND INSTRUMENTATION

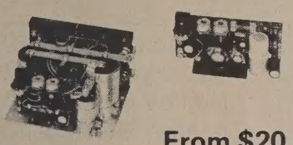
From $395

SUPERSWITCHER SERIES switching power supplies offer 5V @ 150A in the industry "standard" forced-air SuperSwitcher™ model (9N) and 5V @ 50A in the new convection cooled Contortionist model (9E). Both models offer other voltages with efficiencies to 80%.
FEATURES: Input line tolerance of +10/-20%. 24 hour burn-in. Logic inhibit standard. 9N: 6000 units field proven in 4 years. 9E: Versatile package with 5 new protective features, patents pending.

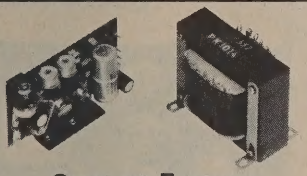
From $29.00

OEM II SERIES, a second generation open-frame design, offers the industry's widest choice of package configurations with 10 single and 6 multiple output sizes to choose from. Added to this series are 4 new 8-10V units.
FEATURES: IC regulated design. Adjustable current limiting. Metal film resistors. All hermetic power semiconductors. Multi outputs fully isolated and interconnectable in any positive/negative configuration. 115/230V input and electrostatic shield, standard.



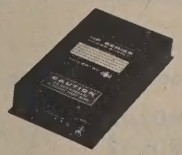
From $20

SM SERIES sub-modular DC power supplies are available for assembly of "off-the-shelf" custom power supplies by user or Powertec. 59 models in 10 basic power packages offer outputs from 1.2V to 30V, and up to 75A.
FEATURES: Built-in rectifier, filter, regulator. Adjustable voltage, current limit and OVP. Logic inhibit function. Remote sensing and programming. Computer-grade capacitors. Associated transformers, heatsinks and thermostats also available.



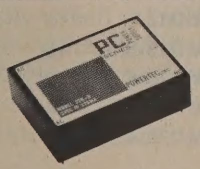
Contact Factory

PK SERIES power supplies combine sub-modules (SM Series) in kit form with a custom input transformer to provide an almost unlimited variety of multiple outputs, each at the required voltage and current.
FEATURES: Minimum number of components. Completely engineered, tested, and documented. Maximum form factor flexibility. Easily spared and maintained. Sub-modules, heatsinking and transformer are only components required. Minimal assembly costs.



From $475

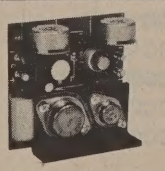
HP SERIES militarized regulated DC power modules are designed to meet airborne specifications and applications with a flat pack modular concept.
FEATURES: Up to 28V, up to 120A. 30 different models. Series regulated design. Excellent power/cost ratios. High power density, up to 5 watts/in^3. 3Ø, 400Hz input.



From $30

PC SERIES

- Fixed DC Voltage
- PC Card Mountable
- Single/Dual Output
- Potted Construction
- 5-24 VDC to 1A



From $16.95

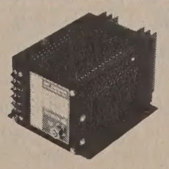
DCR SERIES

- DC Voltage Regulators
- Up to 24 VDC
- Up to 12A
- 2 Power Ratings

From $56.35

XR SERIES

- 3 Package sizes
- Single/Dual output
- Up to 36V
- Up to 3A
- Built-in OVP



From $138

SR SERIES

- 4 Package Sizes
- Up to 28V
- Up to 35A
- Built-in OVP
- 55°C Full Rated

CUSTOM POWER SUPPLIES

REACOR INC

STANDARD OEM POWER MODULES

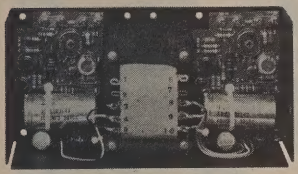
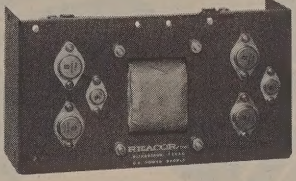
MULTIPLE OUTPUT



Case K Dual Output

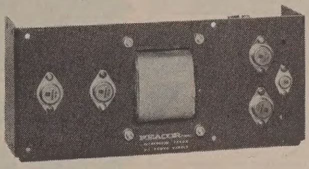
Select any two outputs from Case B single output table eg: +5 Volts at 3 Amps and —9 Volts at 2 Amps. Outputs are supplied floating



Case L Dual or Triple Output

Select from the following combinations of outputs. (See single output tables for voltage and current values)

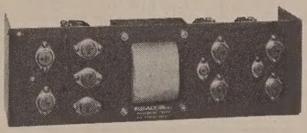
a/ 2 Size "C" outputs
b/ 1 Size "C" & 1 Size "B" output
c/ 3 Size "B" outputs



Case R Dual/Triple/Quadruple Outputs

Select from the following combinations of outputs (See single output tables for voltage and current values)

b/ 1 Size "C" & 2 Size "B" outputs
c/ 4 Size "B" outputs



Case S Dual/Triple/Quadruple/5 & 6 Outputs

Select from the following combinations of outputs (See single output tables for voltage and current values)

a/ 2 Size "D" outputs
b/ 1 Size "D" & 2 Size "C" outputs
c/ 1 Size "D" & 3 Size "B" outputs
d/ 4 Size "C" outputs
e/ 2 Size "C" & 3 Size "B" outputs

HOW TO ORDER MULTIPLE OUTPUT SUPPLIES

a) Specify case size and outputs eg: R(5V, 6A), (15V, 1.4A), (15V, 1.4A) describes a multiple supply which will deliver + 5 Volts at 6 Amps, ± 15 Volts, 1.4 Amps.

b) Model Numbers will be assigned sequentially and can be assigned in advance.

c) To Determine Price:

Output Cost	Case Factor	Shielded Transform.	Screen Cover
B Size $26	K Size $10	$2.50	$ 5.00
C Size $38	L Size $10	$2.50	$ 8.00
CC Size $52	R Size $20	$2.50	$10.00
D Size $68	S Size $20	$2.50	$12.50

Overvoltage Protection — $8.00 per output
Dual ± outputs require only one OVP.

Add Total Cost for Outputs Used + Add Case Factor + Add Cost for Options = Total Price

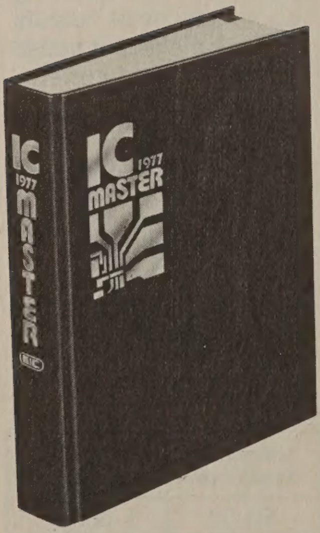
CUSTOM POWER SOURCES

Reacor specializes in custom designed power sources, such as ferroresonant and switching supplies. We will supply you a complete quotation in three days or less and can ship most prototypes within two weeks.

WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

Low Cost, Field-Proven Miniature Power Supplys®

SQ, P741

Value Products from the NO. 1 SOURCE

- SHORT CIRCUIT PROTECTED
- NO DERATING THROUGH +71°C
- MTBF 150,000 HOURS AT 25°C

The **SQ** and **P741 Series** incorporate the same reliable design and manufacturing techniques used in the high performance **P and SP5900 Series** described on catalog page 15. The smaller sized **SQ Series** units use minimal P.C. Board real estate and deliver moderate output power levels. The slightly larger **P741 Series** units provide higher power output ratings than the **SQ Series** and are packaged to achieve the best possible utilization of space. Both series are ideally suited to applications requiring high reliability, low cost and better than average line and load regulation.

REGULATED POWER SUPPLY
SEMICONDUCTOR CIRCUITS, INC.
MODEL SQ2.15.50
REGULATED POWER SUPPLY
P741 1015

GENERAL SPECIFICATIONS

INPUT VOLTAGE AND FREQUENCY
105 to 125 Vac — 50 to 440 Hz

OUTPUT VOLTAGE TOLERANCE
±1% (Fixed): Dual Output Models
+4%/-1% (Fixed): Single Output Models

RIPPLE AND NOISE (PARD)
1mV RMS

DUAL OUTPUT TRACKING
1mV/mV (Typical)

TEMPERATURE COEFFICIENT
0.02%/°C (Typical)

OPERATING TEMPERATURE RANGE
-25°C to +71°C (No Derating)

STORAGE TEMPERATURE RANGE
-40°C to +85°C

I/O ISOLATION RESISTANCE
50 Megohms

SHORT CIRCUIT PROTECTION
Current Limiting

Lowest Cost, Highly Reliable Power Supplys® Includes Higher Voltage Plasma Display Models

APS, DPS, ED

Value Products from the NO. 1 SOURCE

- **HIGHLY RELIABLE**
- **COOL, EFFICIENT OPERATION**
- **ULTRA-LOW PRICED**

The APS and DPS Series of encapsulated modular power supplys are specifically designed to provide reliable and economical DC power for applications not requiring extremely tight line and load regulation.

Incorporating proprietary design techniques, the **APS Series** delivers dual outputs suitable for many analog applications. The time-proven **DPS Series** offers single outputs in a range of current levels that meet the needs of logic applications.

Both families feature MTBF's >150,000 hours, low case temperature rise (up to 18°C cooler than other manufacturers' equivalent products) and require no derating through 71°C.

Industry Standard, High Performance Power Supplys®

P & SP5900

Value Products from the NO. 1 SOURCE

- REGULATION TO 0.01%
- FULL OPERATION UP TO 85°C (M OPTION)
- MTBF > 150,000 HOURS

The P and SP5900 Series of high performance modular encapsulated power supplys are the standard of the industry with a proven record in the field since 1968. Continuous design improvements with respect to magnetics and regulator circuitry have led to an increased reliability (MTBF), a lower case temperature rise (up to 18°C cooler than other manufacturers units), and highest actual performance. The Militarized version (Suffix M) of these units is designed to meet the more demanding temperature, humidity and vibration requirements of military and critical industrial applications. These units include hermetically sealed components and tantalum capacitors for full rated operation through +85°C.**

ES, EA

High Efficiency Power Supplys®

Value Products from the NO. 1 SOURCE

- **EFFICIENCY TO 80%**
- **LINE TRANSIENT IMMUNITY >60 dB**
- **LOW CASE TEMPERATURE RISE: 15°C TYP**

The ES/EA Series of line powered, encapsulated modular power supplys features efficiencies to 80% which remain nearly constant over the entire input voltage range. High efficiency reduces internal power dissipation, and cooler operation results. These benefits combine to provide higher overall system reliability.

Key to this performance is a highly efficient ripple regulation circuit that dissipates 4 to 5 times less power than equivalent conventional power supply designs. In addition, the high efficiency regulator circuit contains low pass filtering that provides immunity to line transient effects. . .unmatched by conventional power supply designs.

µD

24 Pin DIP DC/DC Converters

Value Products from the NO. 1 SOURCE

- **HIGH DENSITY 24 PIN DIP PACKAGING**
- **0.5" ON CENTER P.C. BOARD MOUNTING**
- **SHORT CIRCUIT PROTECTED**

The **µVERTER Series** are highly efficient, ultra-miniature DC/DC converters that are packaged in a 24-pin DIP configuration. These units can drive up to 25-IC modules of Op Amps, yet are suitable for P.C. card files requiring 0.5 inch on center mounting. Lower profile packages for OEM applications are available on request. Please contact the factory.

The **µVERTER Series** offers a selection of outputs suitable for many applications including µP's, memory, CMOS devices and level shifting. Though not always required, the π filter of Fig. 3 can be connected by the user for a 60dB attenuation of switching spikes appearing at the input.

HINTS

1. Dual outputs can provide a single output at full rated power when wired as shown in the connecting instruction.
2. IT IS IMPORTANT for both test and usage that each active output be decoupled by connection of a 10 µF/35V tantalum capacitor AS CLOSE AS POSSIBLE TO THE LOAD.
   Dual output applications will require 2 capacitors. For realistic readings, noise measurements should be taken across the capacitor(s).

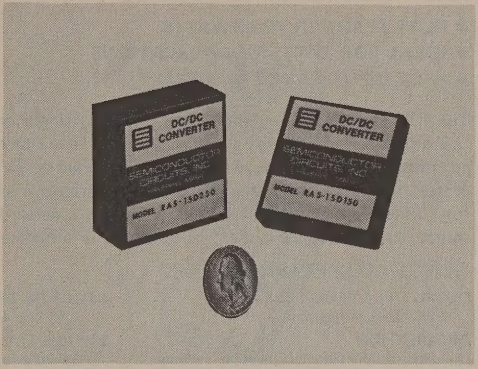
General Purpose Economy, Regulated DC/DC Converters...Two Pin-Outs

RD, RA

Value Products from the NO. 1 SOURCE

- **SHORT CIRCUIT PROTECTED OUTPUTS**
- **HIGH PERFORMANCE π INPUT FILTER**
- **EFFICIENCY TO 65%**



The RD and RA Series are economy priced, high performance DC/DC converters designed for all but the most demanding analog and digital applications. The families differ only in pin-out, and feature efficiency to 65%, MTBF's in excess of 150,000 hours and low input ripple through use of an internal high performance π input filter (see catalog page 9). Both families feature I/O isolation and deliver higher in-circuit performance than equivalent converters offered by other manufacturers.

The RD Series pin pattern enjoys widespread industrial usage. **The RA Series** models are pinned out to be plug-in compatible with equivalent competitive units.

High Efficiency, Ripple Regulator, Single Output DC/DC Converters

SW, CW

Value Products from the NO. 1 SOURCE

- OUTPUT POWER TO 48 WATTS
- IDEAL FOR BATTERY APPLICATIONS
- WIDE INPUT RANGE - TO 200%

The **SW** and **CW** Series are highly efficient, single output DC/DC converters. Using proportional energy transfer high efficiency techniques, these encapsulated modular converters are specifically designed to efficiently maintain well regulated outputs where large input voltage variations exist. These units are ideal for applications where the input DC power is derived from a poorly regulated source; such as a battery, a motor generator or a fuel cell.

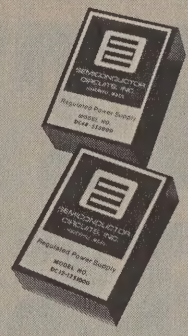
Higher Efficiency, Broad Input Range, Single Output DC/DC Converters

Value Products from the NO. 1 SOURCE

- **OUTPUTS TO 250V FOR PLASMA DIGITAL DISPLAYS**
- **WIDER INPUT RANGE - TO 200%**
- **IDEAL FOR BATTERY OPERATION**



The **DC Series** of regulated, single output DC/DC converters incorporates a high efficiency, proportional energy transfer technique. These devices operate with efficiencies to 80%, which reduces heat generation and increases overall system reliability.

The **DC Series** units tolerate extremely wide input voltage variations — to 200% — a feature which particularly suits this family for operation from batteries, motor generators, fuel cells and other poorly regulated sources of DC input power.

Most **DC Series** models include input-to-output (I/O) isolation. This feature permits either output terminal to serve as output common and affords a simple method for obtaining a positive or a negative output voltage for either polarity of input voltage.

The models having rated outputs of 180 and 250V are ideal for powering plasma digital displays.

STAY UP-TO-DATE ON NEW PRODUCTS
GET A FREE SUBSCRIPTION TO ELECTRONIC PRODUCTS MAGAZINE...

Every month over 92,000 buyers and specifiers like yourself receive **ELECTRONIC PRODUCTS MAGAZINE.** They know they'll be getting the type of information they can put to use immediately.

ELECTRONIC PRODUCTS MAGAZINE'S editorial is 100% product oriented. And it's a balanced editorial package. Every month hundreds of new products are featured. Plus — Special Reports on specific products — Round-ups on other product groups — The popular and informative Forums — The all-new "Test your IQ" series — Wall charts on various types of products — Outlook — And the newly expanded EP/IC Update monthly report.

If you're not getting ELECTRONIC PRODUCTS MAGAZINE, write to the address below for a qualification card.

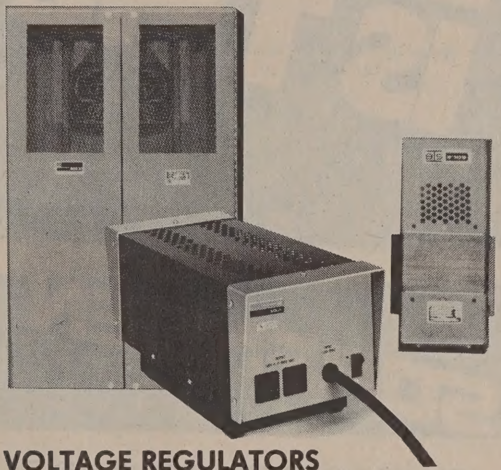
Sola First in Voltage Regulation

SOLA SOLIDS
SOLA ELECTRIC
SOLA ELECTRIC

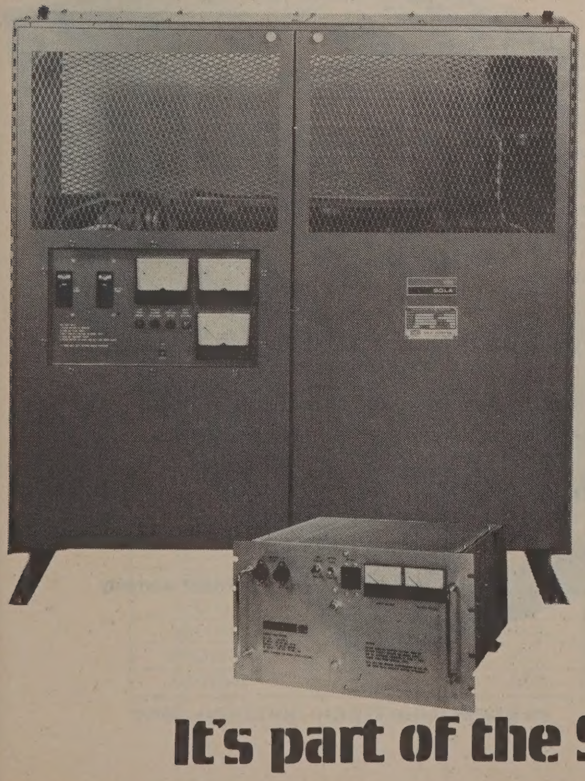


POWER SUPPLIES

Sola can supply your needs. Single, dual and triple outputs. From microprocessors to the largest electronic equipment. Available off-the-shelf from your electronic distributor. Think of us as your supply line.

VOLTAGE REGULATORS

Sola . . . the #1 name in voltage regulation. From Constant Voltage Transformers to Minicomputer Regulators to our famous Solatron® Line Voltage Regulator for computers and industrial use. Sola's always there with critical protection when it's needed.



UPS & STANDBY POWER SYSTEMS

They stand the test when power fails and valuable equipment and systems are endangered. Look to Sola for your UPS needs.

FOR MORE INFORMATION

See our Sales Representative listing in the EEM Yellow Pages. Or contact: Sola Electric, 1717 Busse Road, Elk Grove Village, Illinois 60007. Phone: (312) 439-2800.

It's part of the Sola package.

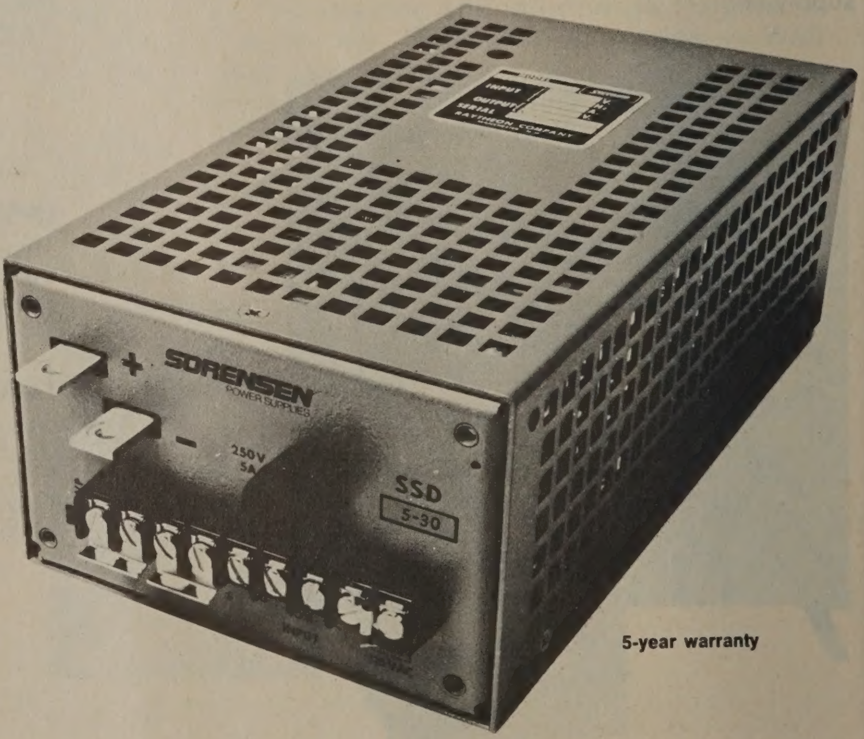
SORENSEN POWER SUPPLIES

NEW SSD SERIES

HIGH EFFICIENCY MODULAR DC SWITCHING POWER SUPPLIES

Standard Features:

☐ 115/220 Vac input by external barrier strip change.
☐ High efficiency (up to 78%).
☐ 50/60-Hz operation with no derating.
☐ Logic shutdown for system applications.
☐ Extra long hold-up time.
☐ Low ripple and noise through use of double-stage filtering.
☐ Wide-range output voltage adjustment.
☐ 20-kHz switching.
☐ UL component recognition.
☐ Built-in adjustable over-voltage protection.
☐ Convection cooled.
☐ Made in USA of quality components.
☐ Remote sensing.
☐ Superior line and load regulation.
☐ Heavy duty output terminals.
☐ Five-year warranty, backed by worldwide service organization.



5-year warranty

SORENSEN POWER SUPPLIES

NEW SSD SERIES

Common Specifications:

Efficiency: 72-78%

Dimensions: In. (mm)
Module III - 3.313 (84), 5.125 (130), 9.5 (241)
Module IIIA - 3.313 (84), 5.125 (130), 14.0 (356)

Stability: .05% for 24 hours after warmup

Temperature Coefficient: .008% per °C

RFI: Minimized through computer-optimized input/output filtering. Meets most portions of MIL-STD 461A for both narrowband and broadband interference. Surpasses performance of conventional regulators.

Transient Response: 1 millisecond for half-load to full-load change and return to a one-percent band.

Resolution: .05% V out max

Adjustable Built-in Overvoltage Protection: All Models

Automatic Current Limiting: Adjustable from 20 to 150% rated full-load current.

Temperature Range: Operating: 0° to 71°C
Storage: −55° to +85°C

Programming: Resistance =1000Ω/V
Signal = Volt/Volt

Series Operation: to 100 Vdc

Turn on/off Overshoot: None

Isolation: 2100 Vdc, Input to Chassis
500 Vdc, Output to Chassis

Fall Out: Will provide full output current at regulated voltage for 40 milliseconds following removal of nominal input power, half output for 80 milliseconds.

Voltage Regulation: Line: 0.03% over full AC input range.
Load: 0.03% for zero to full load.

Voltage Ripple: Typical 5mV rms, 20mV pk-pk (20Hz to 20 MHz).
Maximum 8mV rms, 50mV pk-pk (20Hz to 20MHz).

Input Power: 98-132 Vac
187-250 Vac
Frequency: 47-63 Hz single phase.
360-440 Hz (double rms Ripple spec.)
No derating.
Voltage selectable by a single link on the front panel.
Direct-current operation from 255-345 Vdc

Output: (See table) Wide adjustment range. Output is floating; either positive or negative terminal can be referenced. Resolution of output adjustment, 0.05% Vo maximum.

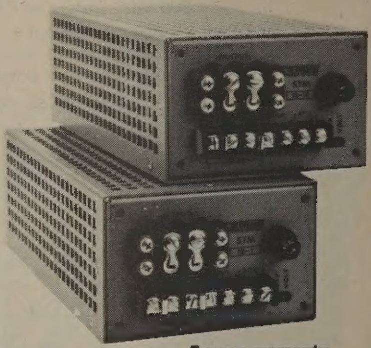
SORENSEN POWER SUPPLIES

STM SERIES

HIGH PERFORMANCE MODULAR DC SWITCHING POWER SUPPLIES

- **Low ripple, superior RFI performance**
- **Built-in adjustable overvoltage protection standard on all models**
- **Efficiencies to 75%**



5-year warranty

Common Specifications:

Efficiency: to 75%

Volume: 160 in ^{3} for Module III:
238 in^3 for Module IIIA,
352 in^3 for Module IVA,
518.5 in^3 for Module VI.

Stability: .05% for 24 hours after warmup

Temperature Coefficient: .01% per °C

RFI: Minimized through computer-optimized input/output filtering. Meets most portions of MIL-STD 461A for both narrowband and broadband interference. Surpasses performance of conventional regulators.

Transient Response: 1 millisecond for half-load to full-load change and return to a one-percent band.

Resolution: .05% V_{out} max

Adjustable Built-in Overvoltage Protection: All models.

Automatic Current Limiting: Adjustable from 50 to 125% rated full-load current.

Temperature Range: Operating: 0° to 71°C
Storage: −40° to +85°C

Programming: Resistance = 1000 Ω/V
Signal = Volt/Volt

Series Operation: to 200 Vdc

Turn on/off Overshoot: None

Isolation: 1300 Vdc, Input to Chassis
500 Vdc, Output to Chassis

Output Impedance (typical):
.005Ω at 10 kHz
.01Ω at 50 kHz
.015Ω at 100 kHz
.02Ω at 500 kHz

Fall Out: Will provide full output at regulated voltage for 15 milliseconds following removal of nominal input power, half output for 30 milliseconds.

Voltage Regulation (comb. line and load): .05%

Ripple (p—p): 50 mV (Worst case. Typically less than 30 mV)

Input Power: 105—132 Vac.
50—440 Hz.
127—172 Vdc.

DCR-A&B SERIES

Common Specifications;

Resolution (voltage): 0.05% of E_0 max. (typical)

Resolution (current): 0.5% (DCR-A) 0.05% (DCR-B), typical

Remote sensing: Max. drop per load lead 3V (DCR-A), 8V (DCR-B)

Overload/short circuit protection: Adjustable. Current limiting with automatic recovery.

Series operation: To 200 Vdc max. (150 and 300V models — 2 in series)

Parallel operation: Master-slave, 4 units max.

Operating temperature range: 0°C to +71°C

Storage temperature: −40°C to +85°C

Isolation voltage: 1000 Vdc input to output

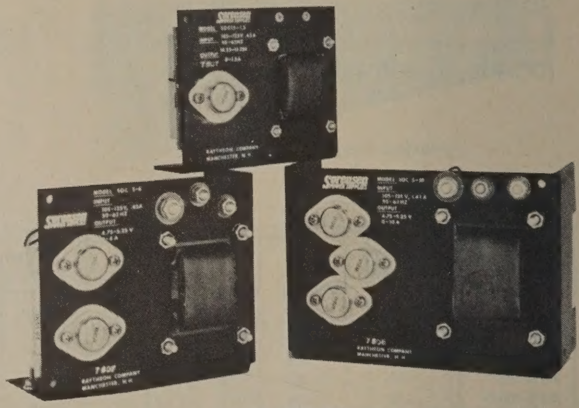
SORENSEN POWER SUPPLIES SOC SERIES

OPEN CONSTRUCTION, INDUSTRY-RATED OEM DC POWER SUPPLIES

- Standard voltage and package sizes
- 115/208/230 Vac input standard
- Made in USA with quality components
- No overshoot with turn-on, turn-off, or power failure



1-year warranty

Common Specifications:

AC Input Power: Vac: 105-125 (190-226). (210 to 250 available by using taps on power transformer.)

Frequency: 50 to 63Hz. (Derate I_O 10% at 50Hz.) For 400Hz operation, consult factory.

Input Current rms:

	115V	208V	230V
Series A	0.43A	0.23A	0.21A
Series B	0.85A	0.45A	0.425A
Series C	1.41A	0.86A	0.75A
Series E	3.0A	1.8A	1.5A
Series F	4.0A	2.44A	2.0A

Voltage Regulation (comb. line and load): ±0.15% +6mV for 105 to 125 Vac and 100% load change.

Voltage Ripple and Noise: 1.5mVrms, 5mVpp.

Temperature Coefficient: 0.03%/°C.

Transient Response Time: 50μSec (for changes in load between 10%-100% and 100%-10%) to recover to ±50mV band.

Drift (24 hours): 0.2% after 1-hour warm-up.

Remote Sensing: 100mV maximum drop in each leg.

Operating Temperature: 0°C to 60°C

SORENSEN POWER SUPPLIES QSA SERIES

WIDE RANGE CONVECTION-COOLED MODULAR POWER SUPPLIES

- Superior regulation and ripple specifications
- 14 models available up to 330 volts output
- Remote sensing and programming
- Thermal and short circuit protection

5-year warranty

* Free-air rating — no external heatsink. ** ±5% adjustable. Consult Factory for Prices. (603) 668-4500

Common Specifications cont.

Storage Temperature: –20°C to +85°C.

Overshoot: No overshoot on turn-on, turn-off, or power failure.

Overvoltage Protection: Available on all models except 2 volt. Specify by adding "VP" suffix to model number.

Current Foldback: Automatic, Adjustable; 80-150% of rated current: Factory-set to 140% of rated (40°C) output current.

Cooling: Convection.

Size:
Series A: 4.875 x 4.00 x 1.625in.
Series B: 5.625 x 4.875 x 2.50in.
Series C: 7.00 x 4.875 x 2.75in.
Series E: 14.00 x 4.875 x 2.75in.
Series F: 16.75 x 4.875 x 4.875in.

Weight:
Series A: 2 lbs.
Series B: 4 lbs. 4 oz.
Series C: 6 lbs. 6 oz.
Series E: 12 lbs. 6 oz.
Series F: 16 lbs.

Mounting: Three mounting surfaces on all package sizes.

Finish: Black anodize.

QSA SERIES

Common Specifications:

Constant Voltage Ripple (PARD): 300 microvolts rms (3 miliovolts peak to peak).

Remote Sensing: 1.5 volts drop maximum per load lead.

Overload/Short Circuit Protection: Current foldback (current limiting for 10-volt models).

Overvoltage Protection (Optional): Should the output voltage tend to exceed the adjustable overvoltage trip level, a sensing/SCR crowbar circuit operates in 10 microseconds to reduce the output voltage to 2.5Vdc or less (see Optional Overvoltage Protection column in table).

Series Operation: Two units may be operated in series (10-volt models may be operated in series up to a total output of 200 volts).

Parallel Operation: Four units may be operated in parallel.

Drift: 0.025%/8 hours (after 30-minute warmup) with constant line, load and ambient temperature.

Remote Prog.: 1V/V

Input Power: 105-125V, 200-240V, 210-250V single phase, 47-440Hz

Operating Temperature Range: 0°C to +71°C

Storage Temperature Range: 40°C to +85°C (with VP)

Output Floating: Either side of the output may be grounded.

Cooling: Convection.

Isolation Voltage: 1000Vdc — input; 700 Vdc — output.

Finish: Case is finished in black wrinkle paint.

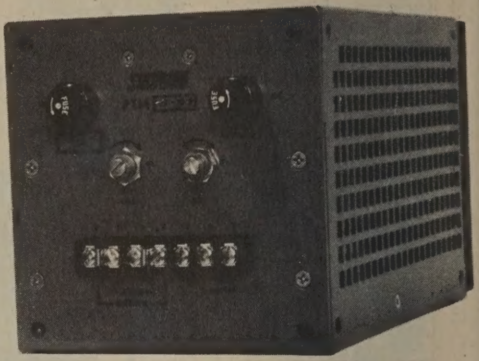
SORENSEN
POWER SUPPLIES

PTM SERIES

SINGLE AND DUAL OUTPUT LINEAR MODULAR POWER SUPPLIES

- **High reliability**
- **Convection cooled**
- **Built-in adjustable overvoltage protection standard on all models**



5-year warranty

Common Specifications:

	PTM Single	PTM Dual
Voltage Regulation (line and load comb.)	0.05% + 5 mV	0.02%
Voltage Ripple (PARD)[1]	1 mV rms, 5 mV peak-to-peak	
Temperature Coefficient .	0.01%/°C or 1 mV/°C whichever is greater	
Transient Response Time	50 μsec (for changes in load between 10-100% and 100-10% to recover to ±20 mV band)	
Tracking Accuracy	Adjustable to 0.2%	
Drift (24 hours)	0.1% after 1 hour warmup	
Remote Programming ...	500 ohms/volt	
Remote Sensing	250 mV max. drop in each leg	
Power Factor (Typical) ...	80%	
Operating Temperature ..	0°C to 71°C	
Storage Temperature	−40°C to +85°C	
Finish	Textured blue thermal paint	
Cooling	Convection	

Current Foldback

PTM SINGLE — Automatic, adjustable; 50-130% of rated current; factory-set to 125% of rated (40°C) output current.

PTM DUAL — Automatic, adjustable; factory-set to 125% of rated (40°C) output current.

Overvoltage Protection

PTM SINGLE — Automatic, adjustable crowbar action; response time 100μsec typ. to avoid nuisance tripping.

PTM DUAL - DC outputs are protected from an overvoltage condition by an internally adjustable protection circuit. The outputs are sensed separately and in the event of an overvoltage condition in either output, both outputs are shorted by an internal SCR within 50 μsec. The SCR shorts the positive output to the negative output. This feature together with built-in reverse-polarity diodes on each output effectively keeps the outputs within 2.5 volts of the common after an OVP trip. The circuit is designed to tolerate the OVP tripped condition indefinitely.

NOTES:

(1) PARD — The "Periodic and Random Deviation" of the output power from its average value, with all external operational and environmental parameters maintained constant.

(2) 132 Vac at 20% reduced rating, reduce linearly from 125 Vac.

Module Package PTM Dual	Size (in.) H	Size (in.) W	Size (in.) L	Weight (lbs)	Input Power at 1φ 50-440 Hz AC volts/AC amps 105-125[2]	200-240V	210-250V

SORENSEN POWER SUPPLIES

SRL SERIES

MEDIUM POWER, HIGH PERFORMANCE POWER SUPPLIES FOR LABORATORY AND SYSTEMS USE

- **Remotely programmable in voltage and current modes with automatic crossover**
- **Low ripple and peak-to-peak noise specifications**
- **Fast response time over full load range**

5-year warranty

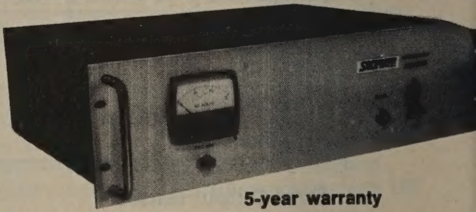
SORENSEN POWER SUPPLIES

ACR SERIES

HIGH EFFICIENCY SOLID STATE LINE VOLTAGE REGULATORS

- **Insensitive to frequency variations**
- **Wide input voltage range**
- **Low distortion**
- **Power levels to 15kVA**



5-year warranty

Model No.	Output Power*		Voltage Regulation		Response Time	Temp. Coeff.	Input Power			% Efficiency

*ACR units may be connected in multiple to supply regulated three phase power (Write for Application Note PAN-ACR-2).

Specifications:

- **Remote Programming:** 10 ohms per volt (Typ.)
- **Remote Sensing:** All models 1.5 volts drop maximum per load lead.
- **Input Power Factor (Typical):** 0.75
- **RFI:** Meets MIL-I-26600 specifications for Class III equipment.

Notes:

1. The speed to recover to 63% of the peak deviation of the transient caused by maximum line or load changes. Complete recovery may be from 1 to 8 Hz depending on the magnitude of line or load change or up to 10 Hz for a simultaneous combination of worst-case line and load changes.
2. May be operated from 47 to 53 Hz or 57-63 Hz. All units are factory adjusted for optimum 60 Hz performance and may be readjusted for optimum 50 Hz performance.

SRL SERIES

- **Remote Sensing:** 1 volt per load lead (maximum allowable)
- **Series Operation:** Up to 200 Vdc output maximum
- **Parallel Operation:** 3 units maximum in parallel
- **Operating Temperature Range:** 0°C to 71°C
- **Storage Temperature:** −40°C to +85°C
- **Isolation voltage to Ground:** 1000 Vdc input; 200 Vdc output
- **RFI:** MIL-I-6181D
- **Output Voltage Turn-On/Turn-Off Overshoot:** None
- **Output Current Turn-On/Turn-Off Overshoot:** None
- **Overload/Short Circuit Protection:** Crosssover to current mode or crossover to voltage mode
- **Overvoltage Protection:** 10 microsecond crowbar
- **Finish:** Case is finished in black semi-gloss baked enamel; front panel is finished in black semi-gloss enamel / white lettering.
- **Programming:** Adjustable resistance and voltage (gain) programming constants. Complete details are in Sorensen's Performance Note PAN-SRL-1.
